Welcome to AIT

The Asian Institute of Technology (AIT), founded in 1959, is a not-for-profit international English-speaking postgraduate institution located on a green campus north of Bangkok, Thailand.

AIT offers the opportunity to study at an institution in Asia which possesses a global reputation. Going forward, AIT will be stressing its global connections, injection of innovation into research and teaching, its relevance to industry, and its nurturing of entrepreneurship, while continuing to fulfill its social impact and capacity building role. Sitting on a beautiful green campus located just north of Bangkok, Thailand, AIT operates as a multicultural community where a cosmopolitan approach to living and learning is the rule. You will meet and study with people from all around the world.

Today, AIT's internationally recognized engineering, environment, and management graduates are highly sought after by employers in their home country and elsewhere. Across many walks of life in Asia, AIT alumni have distinguished themselves as CEO's of private and state enterprises, as business owners, as well-respected researchers and faculty, and as senior university and government officials.

Charter of the AIT AIT Enabling Act AIT Bye-Laws

What we offer

We believe our university is enriched by having students and staff from a wide variety of backgrounds. Higher education should be open to everyone who has the ability and potential to benefit from it. Masters degrees MBA, MEng, MSc Executive Master Degree Programs Doctoral Degrees DEng, DTechSc, PhD, DBA Certificate and Special Program Intensive English & academic bridging program Non-degree continuing education courses [Education for SDGs](#)

Awards and Recognition

1987 Science and Technology for Development Award presented to AIT by the United States Agency for International Development and the National Research Council for effectively transferring industrial technology and skills to the developing world, by training scientists and engineers from Asian countries. 1989 Ramon Magsaysay Award for International Understanding presented to AIT for shaping a new generation of engineers and managers committed to Asia, in an atmosphere of academic excellence. Read more at this link: <http://rmaward.asia/awardees/asian-institute-of-technology/>

1994 Development Management Award presented to AIT by the Asian Management Awards for fostering manpower development, technological change and sustainable growth in the region, through advanced education and research.

1996 DAAM International Vienna Awards presented by the Danube Adria Association and Manufacturing (DAAM) International Vienna, Austria, to express appreciation to AIT and its high-technology experts from the Industrial Systems Engineering Program of the School of Advanced Technologies for their significant contribution in the field of technical sciences and international scientific cooperation within the framework of DDAM, on the occasion of the 7th DAAM international symposium to celebrate the 1000th anniversary of Austria.

2006 Friendship Order was awarded to AIT in the area of international relations that have contributed to human resource training for Vietnam and to the development of friendly relations between Vietnam and other countries.

2016 Gold medal in Thai Research Fund Ratings awarded the gold medal from the Thai Research Fund (TRF) for bagging the most perfect scores (seven scores of '5' each) among all universities in Thailand. 2024 International Green Gown Award in the '2030 Climate Action' category for its transformative project, "Net Zero Campus Initiative: A Leap Towards Sustainable Climate Action." Supported by the UN Environment Programme and Allianz Global Investors, the award celebrates exemplary sustainability efforts in higher education worldwide. Read more at this link.

Vision and Mission

Vision

Transforming AIT to be a respectable international graduate institution whose research and education contribute to the development of Asia, by making AIT more global, more innovative, more entrepreneurial, and more economically relevant—while leveraging on its social impact core strengths.

Mission

The mission of AIT in the context of the emerging environment is “to develop highly qualified and committed professionals who will play a leading role in the sustainable development of the region and its integration into the global economy”.

Guided by the above clear, timeless vision and mission, the dedicated students, faculty and staff of AIT are set to steer the Institute along its path of becoming:

- A trailblazer in advanced education in the region, with leadership in IT and new types of multidisciplinary programs
- An exemplary institution, with an emphasis on academic quality in terms of courses and other aspects of operation
- A leader in professional development programs
- A hub for the implementation of regional and transnational research projects, and a research facility for academic professionals. A nexus for networking with other academic and research institutions in the region and the world
- A model international citizen
- A collaborator and partner of national postgraduate institutions
- A financially viable, self-sustaining institution, able to draw support from donors the private sector and individuals, with good governance and strong leadership
- A strong partner to its alumni, who are principal stakeholders through the AIT Alumni Association (AITAA)

Milestones

1957–1958–1959–1961–1967–1968–1973–1979–1984–1993–1999–2009

1957: The Southeast Asia Treaty Organization (SEATO), initiate establishment of a regional graduate school of engineering, with principal support to be provided by SEATO member countries (Australia, France, New Zealand, the U.K., and the U.S.), with additional support from other regional member countries (Pakistan, the Philippines and Thailand).

1958: The SEATO Graduate School of Engineering project is approved by the SEATO Council of Ministers at a meeting in Manila.

1959: The SEATO Council of Ministers’ Meeting in Wellington, New Zealand, in April, approves the establishment of the school by September 1959. On 30 July, His Majesty King Bhumibol Adulyadej of Thailand signs the Royal Decree establishing the SEATO Graduate School of Engineering. The school opens on 8 September.

1961: The first graduation ceremony is held in March.

1967: The Constituent Assembly of Thailand approve legislation for the Charter of the newly named Asian Institute of Technology in October. The Asian Institute of Technology Enabling Act is published in the Royal Thai Government Gazette in November. AIT becomes independent of SEATO as an institution of higher learning empowered to grant degrees.

1968: His Majesty King Bhumibol Adulyadej of Thailand graciously presides over the Eighth Annual Graduation in May, the first for the newly named Asian Institute of Technology.

1973: His Majesty King Bhumibol Adulyadej of Thailand graciously presides over the opening of the new campus in Pathumthani in February.

1979: The 20th anniversary is celebrated with a donors meeting. Financial support is provided by 27 governments and over 20 organizations, foundations, and industries.

1984: The Institute marks its 25th anniversary in September with a donors’ meeting, where the 1985–88 Academic Plan is unveiled, aimed at achieving a balance between classical engineering and management fields. The plan emphasizes consolidating thirteen existing priority fields of study and research that meet the criteria of relevance to Asian needs and of practicability.

1993: AIT and the Government of Vietnam signs an M.O.U. in February to establish the AIT Centre Vietnam in Hanoi. The Institute undergoes academic re-structuring in which smaller academic units are grouped together in Schools toward achieving greater synergy.

1999: The 40th anniversary is celebrated with numerous special events including the AIT Stakeholders Forum 9-10 September, focusing on the challenges ahead. A round-table discussion is held including AIT's trustees, donors, faculty, staff, students, and alumni in addition to representatives of international organizations, NGOs, and the private sector.

2009: AIT's 50th anniversary is celebrated not only in Thailand, but also in various other countries.

AIT Achieves Record Performance in Times Higher Education Impact Rankings 2025

19 Jun 2025AIT

By Sanjeet Amatya

19 June 2025— The Asian Institute of Technology (AIT) proudly announces its best-ever performance in the Times Higher Education (THE) Impact Rankings 2025, reaffirming its global leadership in driving the United Nations Sustainable Development Goals (SDGs). AIT achieved an all-time highoverall score of 89.4 out of 100, placing it in the Top 101-200 out of a record 2,318 participating institutions worldwide.

AIT participated in 12 out of the 17 SDGs this year, securing Top 50 ranks in four SDGs and Top 100 in four others, reflecting the Institute’s commitment to impactful research, inclusive education, and sustainability leadership.

Highlights of AIT’s 2025 Global Rankings:

- SDG 2 – Zero Hunger: Ranked 18th
- SDG 16 – Peace, Justice and Strong Institutions: Ranked 19th
- SDG 17 – Partnerships for the Goals: Ranked 33rd
- SDG 1 – No Poverty: Ranked 47th

Additional notable rankings:

- SDG 14 – Life Below Water: Ranked 62nd
- SDG 8 – Decent Work and Economic Growth: Ranked 80th
- SDG 15 – Life on Land: Ranked 96th
- SDG 6 – Clean Water and Sanitation: Ranked 98th

AIT is also placed within the:

- Top 100-200 for SDGs 10 (Reduced Inequalities) and 12 (Responsible Consumption & Production)
- Top 201-300 for SDGs 7 (Affordable & Clean Energy) and 13 (Climate Action)

“This year’s strong performance reflects AIT’s ongoing commitment to sustainability and global engagement,” said AIT President Prof. Pai-Chi Li. “Our progress across key SDGs, particularly in SDG 2, SDG 16, and SDG 17, highlights the meaningful contributions AIT continues to make through

education, research, and collaboration.”

Source: Times Higher Education

A Legacy of Impact

AIT has consistently ranked among the top institutions since it first joined the THE Impact Rankings in 2020. From a global Top 20 rank in SDG 1 (No Poverty) in both 2020 and 2021 to maintaining a Top 101-200 overall position each year, AIT’s commitment to sustainable development remains exemplary.

As sustainability and social equity become more critical than ever, AIT continues to champion innovation and inclusivity in its journey toward a greener, fairer, and more resilient future.

Dr. Anish Ghimire

Position Assistant Professor Unit Environmental Engineering and Management Faculty of Infrastructure Contact Info (+66-2) 524 6186 524 6186 anish-ghimire@ait.asia [Download full CV](#) Media Links [Personal website](#) PROFILE EDUCATIONAL BACKGROUND RESEARCH INTERESTS TEACHING SELECTED PUBLICATIONS ONGOING AND COMPLETED PROJECTS AWARDS AND HONORS PROFESSIONAL AFFILIATIONS RESEARCH KEYWORDS

Dr. Anish Ghimire is an Assistant Professor of Environmental Engineering and Management at the Department of Water Resources and Environmental Engineering at the Asian Institute of Technology (AIT). He received a Doctoral Degree in Environmental Technology, from an Erasmus Mundus Joint Doctoral Program, Environmental Technologies for Solids, Soil, and Sediments (ETeCoS3) jointly awarded by the University of Cassino and Southern Lazio (Italy), University of Paris-Est (France), and UN-IHE Delft Institute for Water Education (the Netherlands) in 2015. He has M.E. in Environmental Engineering and Management from the Asian Institute of Technology, Thailand (2012) and B. Tech. in Environmental Engineering from Kathmandu University, Nepal (2009). Before joining AIT, Dr. Ghimire worked as an Assistant Professor at Kathmandu University (four and half years) and Nepal Engineering College (two years) in Nepal. His interests include water and waste(water) treatment and resource recovery, anaerobic fermentation processes, modelling greenhouse gas emissions, and life cycle assessments.

- Ph.D. in Environmental Technology, from an Erasmus Mundus Joint Doctoral Program, Environmental Technologies for Solids, Soil, and Sediments (ETeCoS3) awarded by the University of Cassino and Southern Lazio, Italy, University of Paris-Est, France, and UN-IHE Delft Institute for Water Education, the Netherlands (2015).
- Master of Engineering in Environmental Engineering and Management from Asian Institute of Technology, Thailand (2012),
- Bachelor of Technology in Environmental Engineering from Kathmandu University, Nepal (2009).
- Water and Wastewater Treatment Processes;
- Centralized and Decentralized Sanitation;
- Resource Recovery using Anaerobic Digestion, Dark Fermentation, and Photo Fermentation;
- Life Cycle Assessment;
- Climate Resilience Assessment of WASH systems.
- ED78.36 Drinking Water Treatment, 3(3-0)
- ED78.40 Greenhouse Gas Mitigation and Energy Recovery from Waste, 2(2-0)
- ED78.9401 Environmental Life Cycle Assessment, 2(2-0)

Below are some of the latest selected journal articles by Dr. Ghimire:

See latest information below on on-going and completed projects by Dr. Ghimire. For more information, please download his Full CV.

- Biochar Integration for Optimal Methane Recovery and Nutrient Assimilation in Anaerobic Digestion of Food Waste (BIOCHAR). Funded by Research Initiation Grant, AIT Internal Funding, May 2024 – June 2025. Principal Investigator.
- Climate Change and Sanitation: Accessing Resilience and Emission (SCARE) project, Bill and Melinda Gates Foundation, (October 2020 – 31 August 2024), Co-investigator and Project Coordinator for Kathmandu University, (co-PI Prof. Dr. Subodh Sharma, led by Prof. Guy Howard from University of Bristol, UK.
- Establishing the Circular Economy-based livestock sector through collaborative Educational and Research activities (CEER) funded by international cooperation and quality enhancement in higher education (HK-dir) under (NORPART) and Norwegian Ministry of Education and Research and Ministry of Foreign Affairs. (2023 – 2027). Project Team Member <https://site.nord.no/ceer/participants/>
- Optimization of Resources Recovery from Waste Biomass via Dark, Photofermentation and Anaerobic Digestion: An Integrated Circular Biorefinery (ORWIC). Funded by Norwegian Ministry of Foreign Affairs through EnergizeNepal. (Total Budget: around 51,000 US Dollars), Jul 2021 – Jan, 2024, Principal Investigator.
- Assessment of gaps and challenges of Faecal Sludge Management (FSM) system: A case study from Dhulikhel, Banepa and Panauti Municipalities. Funded by Research, Development and Innovation (RDI), Kathmandu University. Sept, 2021 – Apr, 2023. Principal Investigator.
- Chemical-Biological Treatment of Landfill Leachate from Sisdoile Landfill Site. Funded by Research, Development and Innovation (RDI), Kathmandu University. Mar, 2020 – Sept, 2021. Principal Investigator
- Waste Based Sustainable Biorefinery for the Production of Bio-hythane and Bio-chemical. Project implemented through private industrial partner. Funded by Norwegian Ministry of Foreign Affairs through EnergizeNepal. Oct, 2019 – Oct, 2021. Co-Investigator.
- How Tough is WASH. Kathmandu University (PI Prof. Dr. Subodh Sharma, funded by the University of Bristol, UK. Jan 2021 – Jul 2021, Project Manager/Co-Investigator.
- A Pilot Study to Produce Bioenergy and Fertilizer from Kathmandu University's Food Waste", Bioenergy Lab, Department of Mechanical Engineering, Kathmandu University, Funded by Energize Nepal, Kathmandu University, Dhulikhel, Nepal. Nov, 2018 – Nov, 2020 Activity Leader.
- High Elevation Biogas Project in Jumla in partnership with the University of Applied Sciences and Arts Northwestern Switzerland, Institute for Ecopreneurship, Switzerland. Jun, 2017 – Aug, 2018. Project Team Member.
- 2017, Chinese Academy of Science, President's International Fellowship Initiative (PIFI) (awarded but not pursued)
- 2017, Nepal Bidhya Bhusan KA (For highest academic achievement, awarded from the President of Nepal)
- 2017, Young Researcher Fellowship (YRF) for short-term research (6 months), Center of Research for Environment, Energy and Water (CREEW), Nepal,
- 2016, Best PhD Thesis 2016 awarded by the Environmental and Sanitary Engineering Association of Italy (GITISA),
- 2012 – 2015, Erasmus Mundus Joint Doctoral Fellow (Italy, France and the Netherlands)
- 2012, Professor Chongrak Polprasert Award for Outstanding candidate in Environmental Engineering and Management, Asian Institute of Technology, Thailand,
- 2010 – 2012, HM Queen (Thailand) Scholarship for Masters Study in Asian Institute of Technology, Thailand

- Registered Engineer (Registration No.: 24 "A"), Nepal Engineering Council (NEC)
- Member (1602196), International Water Association
- Life Member (10889), Nepal Engineering Association (NEA)
- Life Member (374), Society of Public Health Engineers – Nepal (SOPHEN)
- Life Member, Society of Environmental Engineers Nepal (SEEN)
- Country Chair (2022-2023), IWA Young Water Professionals Nepal Country Chapter

- Water and Wastewater Treatment
- Solid Waste Management
- Anaerobic Digestion
- Life Cycle Assessment
- Greenhouse Gas Emission Modelling

Prof. Attaphongse Taparugssanagorn (Pong) specializes in signal processing, statistical signal processing, and AI. He also excels in wireless communications, specializing in applying IoT and AI to smart systems. Currently, Prof. Pong mentors students in ICT, Telecommunications, and IoT Systems Engineering, focusing on the integration of AI and IoT. Prof. Pong graduated from Chulalongkorn University, Technische Universität Kaiserslautern, and the University of Oulu. He was able to work with various institutions such as the University of Stuttgart, Yokohama National University, and the National Electronics and Computer Technology Center.

- Doctor of Technology, University of Oulu, Finland, (2007)
- Master of Science degree in Electrical Engineering, Technische Universität Kaiserslautern, Germany, (2001)
- Bachelor of Engineering degree from Chulalongkorn University, Thailand, (1997)

Prof. Pong is an expert in signal processing, statistical signal processing, and Artificial Intelligence (AI), particularly in wireless communications with a special focus on integrating AI into smart systems. His research interests encompass the Internet of Things (IoT), exploring data-driven reliability in structural health monitoring, gait abnormality detection with low-power wearable smart shoes, low-cost data acquisition for optical character recognition, coexistence awareness in IoT systems, and environment protection and disaster prediction, extending to innovations in smart greenhouse and smart farming.

- Improved Wi-Fi based Indoor Users' Locations Estimationand Ultrawideband (UWB) with Bayesian filtering based Indoor Users' Locations EstimationSponsor: AIT Research Initiation GrantDuration: Jan 2016 – Jun 2016Gross = THB 50,000 / Overhead = 0 bahtThe objective of this project is to design one or more indoor positioning methods to improve the performances compared to the existing ones in terms of their following performances: accuracy, latency, cost and future development opportunities.
- TV White Space (Unused TV band) Measurement and CommunicationsSponsor: The National Broadcasting and telecommunications CommissionDuration: 6 March 2017 – 21 September 2018 (Extended till 19 January 2019)Gross/Overhead: Gross = THB 3,784,461.60 / Overhead =

THB 187,430 Description: The objective of this project is summarized as follows: To design a low cost, portable TV white space measurement system, conduct the measurement campaigns in rural, urban, and suburban areas, analyze the measured data, and implement new sensing methods. To design and implement a cognitive radio communication system using TV white space.

- AIT OpenCellular Training Center Project Sponsor: Telecom Infra Project Duration: March 1st, 2019 and ending on July 31st, 2020 Gross/Overhead: Gross = USD 12,000 or THB 375,720 and 2 units of OpenCellular-Software defined Radio Devices (OC-SDR) devices Description: The objective of this project is summarized as follows: To develop the non-commercial development and non-traditional deployment of OpenCellular (OC) in AIT and rural areas where access to cellular is limited due to availability of service, price of service or limited consumer demand
- FinCEAL Plus BRIDGES Grants 2019 (Research Visit Grants from the regions to Finland) The visit to the University of Oulu (UOulu), Oulu, Finland Discussion about the dual degree program and the research collaboration on SDG#9: Industry, Innovation and Infrastructure, in particular, new digital technologies, advanced wireless communications, Internet of Things, Artificial Intelligence, Big Data and advanced analytics helping advance sustainable development is indispensable. Duration: September 21st-September 29th, 2020 Budget: Total costs for the whole visit: € 2956 or THB 108,616
- Marie Skłodowska-Curie Actions, Research and Innovation Staff Exchange (RISE): Call: H2020-MSCA-RISE-2019 Project title: Reliable Technologies and Models for Verified Wireless Body-centric Transmission and Localization (ROVER) project University of Oulu (OULUN YLIOPISTO) FINLAND (PI) UNIVERSITA DEGLI STUDI DI FIRENZE ITALY LONDON SOUTH BANK UNIVERSITY LBG UK OSLO UNIVERSITETSSYKEHUS HF NORWAY JSB Solutions ITALY ELAROS 24/7 LIMITED UK IUMBRIA BIOENGINEERING TECNOLOGIES SOCIETA A RESPONSABILITA LIMITATA ITALY YOKOHAMA NATIONAL UNIVERSITY JAPAN UNIVERSITY OF TECHNOLOGY SYDNEY AUSTRALIA ASIAN INSTITUTE OF TECHNOLOGY THAILAND WORCESTER POLYTECHNIC INSTITUTE US NIST US University of Oulu Research Institute Japan - CWC-Nippon JAPAN UNIVERSITY OF NEBRASKA US 2) Duration: 4 years starting on 01/01/2020, extension due to the COVID-19 3) Budget: Total: € 358800.00 or USD 420370.08 or 13,183,030 and € 69000 or USD 80840.40 for AIT For secondments € 31500 or USD 36905.40 or THB 1,157,336 Management and indirect costs: € 10500 or USD 12301.80 or THB 385,798 Research, training and networking costs: € 27000 or USD 31633.20 or THB 992,051
- NICT, Japan Project title: Prevention of 4 Disasters and Their Single Recovery Networks based on Internet-of-Things with Airborne Capability (PATRIOT-4IR-Net) – ICT Virtual Organization of ASEAN Institutes and NICT (ASEAN IVO) NICT, Japan (Donor), Telkom University (Tel-U), Indonesia (PI), and Universiti Teknologi Malaysia (UTM), Malaysia, Asian Institute of Technology (AIT), Thailand, Hanoi University of Science and Technology (HUST), Viet Nam, and Japan Advanced Institute Science and Technology (JAIST), Japan Duration: 24 months: July 1st, 2019 to June 21st, 2021 Budget: USD 40,000 or THB 1,252,400. I can use the budget for travelling to attend the meetings and for purchasing the NetSim Education Suite which costs USD 2,500 or THB 78,275 for the research and our laboratory
- The National Broadcasting and telecommunications Commission (NBTC) Project title: Telehealth Monitoring and Assistive Systems for Elderly and Disabled People (WP2.2: Fall Detection using Wireless Communication Technologies and Deep Learning for elderly people and WP3: Tele-Operation System for Bimanual Rehabilitation for elderly people) I am a member Duration: 36 months: 1 June 2022-16 May 2025 Budget: THB 14,847,715.90 or USD 408,609.14
- Year 2005: Nokia Foundation The Nokia Foundation is intended to encourage efficient, fast-progressing doctoral studies and research. Nokia Foundation is granted to individuals pursuing a doctoral degree in information or telecommunications technology or in clearly related supporting scientific disciplines.
- Year 2009: Global Centre of Excellence (GCOE) fellowship The GCOE fellowship provides funding support for establishing education and research centers that perform at the apex of global excellence to elevate the international competitiveness of Japanese universities.
- Year 2020: Winner Team "Super Mask" in the hardware category at the virtual pitch day, AIT's Open Call Against Covid-19

Dr. Avirut Puttiwongrak

Position Assistant Professor Unit Civil and Infrastructure Engineering (CIE) Faculty of Infrastructure Contact Info avirut@ait.ac.th [Download full CV](#)
Media Links [Personal website](#) PROFILE EDUCATIONAL BACKGROUND RESEARCH INTERESTS TEACHING SELECTED PUBLICATIONS ONGOING AND COMPLETED PROJECTS AWARDS AND HONORS PROFESSIONAL AFFILIATIONS RESEARCH KEYWORDS

Avirut Puttiwongrak received his Ph.D. in Environment and Resource System Engineering from Kyoto University in 2013. Dr. Avirut is currently an assistant professor at the Asian Institute of Technology, where he teaches an introductory Engineering Geology course as well as graduate courses in subsurface engineering and geoenvironment. Dr. Avirut's current research interests include groundwater exploration; groundwater modeling; groundwater resource assessment; subsurface pollution monitoring and evaluation; CO₂ sequestration (CCS); Geo-data analytics studies; and laboratory-scale geohazard investigations.

- Kyoto University / Ph.D. in Environment and Resource System Engineering (Research – Base), Kyoto/JAPAN (2013)
- Asian Institute of Technology / M.Eng. in Geosystem Exploration and Petroleum Geoengineering (Prize), Thailand (2009)
- King Mongkut's University of Technology North Bangkok / B.Eng. in Civil Engineering (Hons), Thailand (2007)

Geophysical, geotechnical, and geomechanical techniques in the exploration of the surface and subsurface, Integrated knowledge of geo-engineering for contributing to the development of geo-energy, geo-environment, and infrastructure.

 INTERESTS TEACHING SELECTED PUBLICATIONS AWARDS AND HONORS RESEARCH KEYWORDS

Dr. Ayushman Bhatt is an Assistant professor of Civil & Infrastructure Engineering at the School of Engineering and Technology (SET). He works in the area of transportation planning and policy, contributing to the AIT's Transportation Engineering (TRE) program. He obtained his Doctor of Philosophy (Ph.D.) at the University of Tokyo in civil engineering. His research interests include socioeconomic impact investigation of transportation projects, transportation policy studies, and sustainable transportation.

Dr. Ayushman's prior experience includes working as research fellow at Singapore University of Technology and Design; postdoc at University of Tokyo; and research associate at Asian Development Bank (ADB) Institute. His recent work encompassed studying various externalities synthesized by transportation projects, including socioeconomic and environmental phenomena of knowledge economy, urban development, urban metabolism, and anthropogenic heat emissions. He has published in refereed international journals and actively contributes to the conferences and societies in the field of transportation.

- Ph.D. in Construction Management, The University of Hong Kong, 2001
- M.Eng. in Construction Management, Asian Institute of Technology, Thailand, 1998
- B.Eng. in Civil Engineering, Universitas Diponegoro, Indonesia, 1994

I am very interested in construction project management issues, particularly in construction business and construction site improvements. In order to improve construction organization performance, I believe that IT application and simulation are useful. Some areas in construction IT application and simulation in which I am interested are project visualization, intelligent agent system, knowledge management tool, web-based project management and system dynamics simulation. This construction business process improvement, however, cannot be fully achieved without improving the construction sites. Therefore, in terms of site improvement, I have conducted some studies related with management of construction organizations and construction site safety.

Dr. Branesh Madhavan Pillai

Position Assistant Professor Unit Industrial Systems Engineering (ISE) Faculty of Technology Contact Info branesh@ait.asia Media Links [Personal website](#) PROFILE EDUCATIONAL BACKGROUND RESEARCH INTERESTS TEACHING SELECTED PUBLICATIONS ONGOING AND COMPLETED PROJECTS AWARDS AND HONORS PROFESSIONAL AFFILIATIONS RESEARCH KEYWORDS

Dr. Branesh M. Pillai is an Assistant Professor of the Medical Engineering program in the Department of Industrial Systems Engineering at Asian Institute of Technology, Thailand. His research primarily focuses on Robot Control Systems, Surgical Robotics, Rehabilitation Robotics, Bioinspiration & Biomimetics, Artificial Intelligence, AR/VR systems, and Heterogeneous Robots.

- Doctor of Philosophy (Ph.D.) in Biomedical Engineering – Mahidol University, Thailand (2019)
- MSc by Research in Electrical Engineering – University of Moratuwa, Sri Lanka (2013)
- Bachelor of Engineering in Electrical & Electronics – Anna University, India (2007)

Research Interests of Dr. Branesh Madhavan Pillai include:

- Rehabilitation: Robot assisted Exoskeleton, Elderly Care and Mobility, Gait Analysis
- Surgical Robotics: Surgical Navigation and Robots, Computer-assisted surgery, Haptics
- Medical Devices: Medical Device and Robot Standards, Product Development
- Field Robotics: Heterogeneous Robots (UGV, UAV, USV), Rough Terrain Robotics
- AI/ Machine Learning: Diagnostic and Imaging Robots, Drug Delivery Robots
- Robot Control System: Adaptive control, Model-based algorithms, Model predictive control
- Biomimetics: Medical Biomimetic Robots, Microneedles and micro robotic grippers
- AT74.07 Automation Technology
- AT74.11 Haptics
- AT86.03 Biomechanics
- AT84.06 Biomimetics

Below are some of the latest selected journal articles by Dr. Pillai:

Dr. Krishna is a Structural Engineering faculty member at AIT. He joined in late 2021 after completing his PhD and working as an assistant professor at the University of Tokyo.

Dr. Krishna's expertise lies in understanding and providing engineering solutions to buildings subjected to earthquakes. His research covers topics like understanding how buildings get damaged during earthquakes, making buildings stronger to withstand earthquakes, and using math to manage disasters better.

He believes in solving engineering problems by considering both technical and social factors. Some of his accomplishments include creating affordable and user friendly ways to strengthen buildings against earthquakes and

Dr. Chutiporn Anutariya is an Associate Professor and the Department Head in the Department of Information and Communications Technologies at the Asian Institute of Technology (AIT), Thailand. Dr. Anutariya graduated from AIT for both her Doctoral and Master's studies, and conducted her post-doctoral fellowship at the Norwegian University of Science and Technology, Norway. Her research interests include data modeling and management, data analytics, digital learning and educational technology, intelligent information systems, knowledge representation and knowledge management, open data and open government data, and Semantic Web, Ontology and Linked Data Technologies.

- Doctor of Technical Science in Computer Science (Jan 1999 – Dec 2001)
- Master of Science in Computer Science (May 1996 – Sep 1998)
- Bachelor of Science in Statistics, First Class Honors and Gold Medal Award (Jun 1992 – Mar 1996)

Prof.Dieter Trau

PositionProfessor, DirectorUnitDepartment of Department of Industrial Systems Engineering (ISE) /AIT Entrepreneurship CenterContact Info trau@ait.ac.th [Download full CV](#) Media Links [Personal website](#) PROFILEEDUCATIONAL BACKGROUNDRESEARCH INTERESTSTEACHINGSELECTED PUBLICATIONSAWARDS AND HONORSRESEARCH KEYWORDS

Prof Trau holds an engineering degree (Dipl. Ing. FH) from the Aachen University of Applied Science, 1994 in Chemical and Bioengineering and a PhD from the Hong Kong University of Science & Technology (HKUST) 2001 in Chemistry. From 1994 to 1998 he worked as a Research Engineer at the Institute of Bio- and Chemical Sensors in Muenster, Germany. At that time he also started his entrepreneurial activities with the foundation of the

biotechnology companies Xantec (1995), 8sens biognostic (2000) in Germany, AYOMAX Pte Ltd (2010), Tip Biosystems Pte Ltd (2014) and E3A Healthcare Pte Ltd (2019) in Singapore. He became a cofounder of AVECRIS Pte Ltd in Singapore in 2018. He was a Research Fellow, Assistant Lecturer/Assistant Professor at HKUST from 2001 to 2004. In 2004 he joined the Division of Bioengineering and the Department of Chemical & Biomolecular Engineering at the National University of Singapore (NUS) as an Assistant Professor. He was promoted to Associate Professor with tenure in 2013. In July 2019 he was hired as the Dean of Engineering by the Asian Institute of Technology (AIT) as a full Professor and also took over the role of the Founding Director of the new AIT Entrepreneurship Center. In June 2023 he completed his 4 year tenure as Dean and continues as a full Professor at the Department of Industrial Systems Engineering (ISE) teaching medical engineering and bio-nanotechnology.

- Ph.D. in Chemistry, 2001 Hong Kong University of Science & Technology (HKUST), Department of Chemistry in collaboration with the Max-Planck Institute for Colloids and Interfaces in Berlin, Germany.
- Engineering degree (Dipl. Ing. FH) in Chemical Engineering/Biotechnology, 1994 Aachen University of Applied Science, Aachen/Jülich, Germany.

Development of new approaches and platform technologies for bioanalytics, biosensors and diagnostics. By utilizing synergies within microfabrication, encapsulation technology, surface/colloidal chemistry and molecular biology novel analytical techniques and devices are created. Expert in analytical chemistry, colloidal chemistry and encapsulation. Major invention are "Reverse Phase LbL Encapsulation Technology" to encapsulate macromolecular drugs (patents granted); "Microcapsule-PCR" to perform millions of PCRs in parallel (patents granted); "In-situ Encoded Bead Microarrays" for protein multiplexing (patents granted); "Supernova biolabel technology" for ultra-high sensitive bioassays (patents granted); "PHOTOPETTE handheld" and "SPECTROPOD microvolume" spectrophotometer technology enabling the first personal handheld spectrophotometer (patents granted) and "BiliOptics Sclera Scanner" for non-invasive jaundice diagnostics and management in infants. Patents are granted for most of Dr Trau's technologies and commercialized by several companies including Capsulation GmbH and 8sens Biognostic GmbH in Germany, Supernova Ltd in Hong Kong and AYOMAX GmbH in Germany, E3A Healthcare and Tip Biosystems Pte Ltd in Singapore.

Dr. Djoen San Santoso is Associate Professor at the Asian Institute of Technology, holds expertise in Construction, Engineering, and Infrastructure Management. With civil and infrastructure engineering background, Dr. Santoso has made significant contributions to the field, particularly in assessing risks in high-rise building construction. His dedication to education is evident through his engaging lectures on project cost and financial management, fostering a dynamic learning environment for students. Dr. Santoso's research encompasses the areas of infrastructure planning and policy, asset management, risk management, public-private partnerships, sustainable transportation in developing countries, public transportation, and non-motorized transportation.

Dr. Ekbordin Winijkul

Position Dean Unit Faculty of Civil and Environmental Engineering Contact Info (+66-2) 524 5648 524 5648) ekbordinw@ait.ac.th [Download full CV](#)
 PROFILE EDUCATIONAL BACKGROUND RESEARCH INTERESTS TEACHING SELECTED PUBLICATIONS COMPLETED AND ONGOING PROJECTS AWARDS
 AND HONORS PROFESSIONAL AFFILIATIONS RESEARCH KEYWORDS

Dr. Ekbordin Winijkul is an Associate Professor in the Environmental Engineering and Management program, Asian Institute of Technology. He got his Ph.D. in Environmental Engineering from the University of Illinois at Urbana-Champaign, USA in 2015. Before joining AIT, Dr. Ekbordin worked as project coordinator for the World Bank and Thailand Pollution Control Department to reduce air pollution emission from diesel vehicles in Bangkok. He also worked at Argonne National Laboratory (USA), International Institute for Applied System Analysis (Austria) and Atmospheric and Environmental Research, Inc. (USA), focusing on emission inventory development of different anthropogenic combustion sources. His current research includes near real-time emission inventory, air quality management, satellite remote sensing for air quality monitoring and airborne microplastics.

- D. in Environmental Engineering, University of Illinois at Urban-Champaign, USA (2015)
- Eng. in Environmental Technology and Management, AIT, Thailand (2002)
- Eng. in Environmental Engineering, Chiang Mai University, Thailand (2000)

Dr. Ekbordin's research interests are emission inventory, air pollution modeling and monitoring, air quality management, system dynamic and environmental technology and management.

ED78.9034: Emission Inventory and Air Pollution Modeling for Air Quality Management

ED78.24: Design of Air Pollution Control Systems

ED78.37: Air Pollution Engineering and Management

ED78.08: Environmental Quality Management

ED78.20: Industrial Waste Abatement and Management

Dr. Govindarajalu Srinivasan

Position Adjunct Faculty
Unit Department of Civil and Infrastructure Engineering (CIE)
PROFILE EDUCATIONAL BACKGROUND RESEARCH
INTERESTS TEACHING SELECTED PUBLICATIONS ONGOING AND COMPLETED PROJECTS AWARDS AND HONORS PROFESSIONAL
AFFILIATIONS RESEARCH KEYWORDS

Dr. Srinivasan is a climate scientist with extensive experience working for the academe, governments, and international organizations. He has been an Adjunct Faculty at AIT since 2016. He worked as a Chief Scientist for Climate Applications at the Regional Integrated Multi-hazard Early Warning System (RIMES), Bangkok for 15 years until 2023 and as Director of the Climate Unit at the India Meteorological Department (IMD) in addition to serving in various capacities as an operational Meteorologist/weather forecasting (1985–2008).

His work focuses on bridging climate science and practice by understanding climate risks to societal systems and developing decision support tools. He has been working closely with governments departments in RIMES Member countries, such as Bangladesh, Bhutan, Cambodia, India, Lao PDR, Myanmar, Maldives, and Sri Lanka to design, build and implement application platforms to use weather and climate information for planning and decision-making in agriculture, health and water sectors.

He worked as a Senior consultant, Climate Adaptation and Prediction branch, World Meteorological Organization (WMO) to enhance national and regional climate services. Prior to joining RIMES, he worked in various capacities within the Government of India as Program Manager, Climate Change, Ministry of Earth Sciences; Scientist, Department of Science & Technology and Director, Climate Unit, India Meteorological Department (IMD). He represented India at UNFCCC and IPCC contributing to policy issues of climate change. He has served/serving on the editorial board of the international journals, including Agricultural and Forest Meteorology and Climate Research.

He has a PhD in Atmospheric Sciences (Climate Modelling) from the Indian Institute of Technology (IIT), Delhi and Masters in Agricultural Meteorology from the Punjab Agricultural University (PAU), Ludhiana, India.

- Post-Doctoral Research– On performance of AGCMs, at the Climatic Research Unit (CRU), University of East Anglia, Norwich, UK (1994).
- PhD Atmospheric Sciences, Centre for Atmospheric Sciences, Indian Institute of Technology (IIT), Delhi, India (August 1994).
- Masters in Agricultural Meteorology, Department of Agricultural Meteorology, Punjab Agricultural University, Ludhiana, Punjab, India (October 1983).
- Bachelor of Science with Honors, University of Delhi, Delhi, India (August 1980)

Dr. Srinivasan's research interest is on climate applications for risk management by bringing together best available science and diverse climate sensitive decision contexts for sustained climate resilience in short and longer-term time horizons.

- A Program to support South Asia Regional Development in Operational Forecasting and Services Delivery under South Asia HydroMet Forum (SAHF) World Bank initiative. Funding: World Bank. Period: Dec 2020 – Mar 2023; location: Regional – South Asia. Role: Team Lead and overall project formulation and technical implementation with RIMES.
- Development of regional-specific Guidance on production of objective seasonal forecasts for the Southern African region. Funding: World Meteorological Organization (WMO). Period: Aug 2020 – Apr 2021; location: Regional – Southern Africa. Role: Lead Technical expert
- Operational Evaluation for Regional Climate Center for Southern Africa and implementation of Climate Services Toolkit (CST) under ClimSA. Funding: EU through WMO. Period: Apr 2022 – May 2024 (ongoing); location: regional – Southern Africa. Role: Lead climate scientist (until RIMES tenure)
- Enhancing Climate Services in South Asia within the UK aid-funded Asia – Regional Resilience to Changing Climate (ARRCC) Programme implemented by UK Met Office. Funding: UK Met Office (UKMO) funded by UK government's Foreign, Commonwealth and Development Office (FCDO). Period: Nov 2018 – Sept 2022, Location: Regional – South Asia. Role: Team Lead and overall technical implementation with RIMES
- Development of Climate Scenarios and Climate Change Scenarios considering the results of the Fifth IPCC assessment results through National, Sub-National or other level of scaling. Funding: Cellule de Prévention et Gestion des Urgences (CPGU) under Pilot Program for Climate Resilience (PPCR) through a World Bank grant. Period: Jan 2018 – June 2019, Location: Madagascar. Role: Team Lead, Climate Change scenario generation and overall implementation with RIMES
- Developing effective Climate Services in Bhutan through implementation of Climate Services Toolkit (CST). Funding: Supported by the World Meteorological Organization (WMO) through funds from Korean Meteorological Administration (KMA) and implemented at the National Centre for Hydrology and Meteorology (NCHM), Royal Govt of Bhutan. Period: Aug 2020 – Sept 2022, Location: Bhutan. Role: Team Lead and conceptualization & implementation of the CST design.
- Developing an Agro-Met Decision Support System for Farm Advisory. Funding: Supported by the World Bank in collaboration with the Department of Agriculture (DoAF), Royal Govt of Bhutan. Year: July 2018 – Dec 2019. Location: Bhutan. Role: Team Lead and overall technical implementation with RIMES
- Support to Global Framework for Climate Services (GFCS) implementation in South Asia. Funding: World Meteorological Organization (WMO) technical implementation funded by Canada Government. Period: Feb 2016 – Mar 2018, Location: Regional South Asia, with pilots in India, Maldives, and Sri Lanka. Role: Team Lead and overall technical implementation
- Capacity building on generation and application of downscaled climate change projections. Funding: UN Economic and Social Commission for Asia and Pacific (UN ESCAP). Period: 2014–2016, Location: Myanmar, Pakistan, Sri Lanka. Role: Team Leader, climate change scientist, design, and implementation with RIMES.
- Strengthening multi-hazard early warning system through the application of agro-meteorological products and services. Funding: UN Economic and Social Commission for Asia and Pacific (UN ESCAP). Period: 2013–2015, Location: Myanmar. Role: Team Leader, overall assessment, design, and implementation with RIMES.

- Climate Adaptation through Sub-Basin Development Investment Program Cauvery Delta Tamil Nadu, IndiaFunding: UNESCO-IHE & Asian Development Bank (ADB)Period: 2012-2013, Location: Tamil Nadu, IndiaRole: Team Lead and overall technical implementation
- Enhancing Utility of Seasonal Climate Forecasts and Managing Climate Change Risks under Linking Information and Decision-Making to Improve Food Security in Selected Countries of the Greater Mekong Sub-RegionFunding: European Commission (EC)/Food and Agriculture Organization (FAO-RAP) Regional Office for the Asia & the PacificPeriod: 2010-11, Location: Cambodia, Lao PDR, and MyanmarRole: Team leader/Chief Scientist Climate Change with RIMES
- Strengthening Resilience of Urban Water, Drainage and Sanitation Sector to Climate Change in Coastal Towns of BangladeshFunding: AECOM Asia with Asian Development Bank (ADB)Period: 2012-2013, Location: BangladeshRole: Team Leader, Climate Change Adaptation Specialist
- Providing climate change scenarios for Maldives using statistical and dynamical downscalingFunding: Govt. Of Maldives, Department of Environment, through UNDP fundsPeriod: 2010-11, Location: MaldivesRole: Team Leader, Lead Climate Scientist
- Climate Risk Management Technical Assistance Support Project (CRM-TASP)Funding: United Nations Development Programme (UNDP), GenevaPeriod: Aug 2008-2010, Locations: Armenia, Ecuador, Indonesia and MozambiqueRole: Technical Lead as Climate Change Scientist with Asian Disaster Preparedness Centre (ADPC)
- Natural disasters and climate change in Finnish aid from the perspective of poverty reductionFunding: Ramboll-Finnconsult Ltd./ Ministry of Foreign Affairs of FinlandPeriod: 2009-10, Location: Helsinki and project countries in the CaribbeanRole: Team Leader and Meteorologist Expert along with Ramboll-Finnconsult team.
- Member of the 7th Indian Scientific Expedition to the Antarctic (Nov, 1987-88), Ministry of Earth Sciences, Govt of India.
- Elected to the prestigious Indian Meteorological Society (IMS) Fellowship, in recognition of his outstanding contributions to meteorology and allied fields of science and technology (Dec 2018), Indian Met Soc. (IMS).
- Felicitated for contributions to the services of India Meteorological Department (IMD) on 144th IMD Foundation Day on 15 Jan 2019 by Hon'ble Union Minister for Science & Technology, Earth Sciences and Environment and Forests & Climate Change, Government of India. (Jan 2019)
- Appreciated for extra-ordinary contribution and service to the Commission for Climatology (CCI) of the World Meteorological Organization (WMO). (Apr 2018), World Meteorological Organization (WMO).
- Member, Board of Trustees & Chair of Science Advisory Group, EarthWatch INDIA
- Life-Member and Fellow of the Indian Meteorological Society (IMS)
- Life-Member of the Association of Agrometeorologists, India.
- Member of the ASEAN Climate Outlook Forum (ASEANCOF) Working Group, ASEAN Specialised Meteorological Centre, Singapore (2020-present)
- Member of the Task Team on WMO accredited ENSO information (April 2023 – Mar 2024)
- Chair of the WMO Technical Commission on Climatology (CCI) Task Team on Guide to Climatological Practices (2014 – 2019)
- Member of the Editorial Board, International Journal – Agricultural and Forest Meteorology, Elsevier (2007 – present)
- Review Editor, Climate Research, an International and Multidisciplinary Journal, Inter-Research, Germany (1997- 2007)
- Contributing author to Intergovernmental Panel on Climate Change (IPCC)'s Third Assessment Report Working Group II (1997-2000)
- Expert/Governmental reviewer of the IPCC Assessment Reports (2006-2022)
- Member of the Indian Delegation at the IPCC, UNFCCC COP and SB negotiation meetings (2002-2007)
- Member of the International Organizing Committee of the World Climate Conference – 3 (WCC-3) being organized by the WMO in 2009 (2008 – April, 2009)
- Climate Services
- Climate Risks
- Climate Change
- Agriculture and Hydromet Decision Support
- Multi-hazard Early Warning Systems

PROFILE EDUCATIONAL BACKGROUND RESEARCH INTERESTS TEACHING SELECTED PUBLICATIONS ONGOING AND COMPLETED PROJECTS AWARDS AND HONORS PROFESSIONAL AFFILIATIONS RESEARCH KEYWORDS

Dr. Huynh Trung Luong is a Professor in the Industrial Systems Engineering Program, School of Engineering and Technology, Asian Institute of Technology, Thailand. His research interests include establishing emergency inventory policies and inventory policies for perishable products, supply chain design, measures of bullwhip effect in supply chains, development of supply contracts, availability-based and reliability-based maintenance, and network flow-related problems.

- D.Eng., Industrial Systems Engineering, Asian Institute of Technology, Thailand, (2000)
- M.Eng., Industrial Systems Engineering, Asian Institute of Technology, Thailand, (1995)
- B.Eng., Chemical Engineering, Ho Chi Minh City University of Technology, Vietnam, (1992)
- establishing emergency inventory policies and inventory policies for perishable products
- supply chain network design
- supply contracts

- measures of bullwhip effect in supply chains
- measures of resilience in supply chains
- availability-based and reliability-based maintenance
- AT72.01: Deterministic Optimization Models

Completed Project:

Serving as the Principal Investigator for

- PMIEM&ISCM (Project Serial Number: SET-2014-A004): Project duration: January 2015 – May 2016
- PMIEM&ISCM (Project Serial Number: SET-2012-A001): Project duration: January 2012 – May 2013
- PMIEM&ISCM (Project Serial Number: SET-2011-A001): Project duration: January 2011 – May 2012
- PMIEM (Project Serial Number: SET-2009-005): 6,181,200 Baht Project duration: January 2009 – December 2009
- Flow Modeling in Hard Disk Drives – Extension: Project duration: January 2011 – June 2011 Total project value: 300,000 Baht

Serving as the co-PI for

- Flow Modeling in Hard Disk Drives: 1,000,000 Baht Project duration: December 2009 – December 2010
- PMIEM (Project Serial Number: SET-2008-051): Project duration: August 2008 – December 2009

Serving as a work package leader for

- MSIE 4.0 project: Project duration: January 2018 – December 2020 Funding: Erasmus + Programme – EU

Ongoing Project:

Serving as a member for

- RECAP 4.0 project: 1,000,000 EUR (start on January, 2021) Funding: Erasmus + Programme – EU

- The best paper award at the 18th Asia Pacific Industrial Engineering and Management Systems Conference (Yogyakarta, Indonesia, 2017)
- The James A. Linen III Memorial Prize for the most outstanding academic performance (Asian Institute of Technology, Thailand, 1995)
- Gold medal for the best academic performance (HoChiMinh City University of Technology, Vietnam, 1992)
- Member of Institute for Operations Research and the Management Sciences (INFORMS)
- Board member of Asia Pacific Industrial Engineering and Management Society (APIEMS)
- Area Editor – Journal of Industrial Engineering and Management Systems (from 2015)
- Advisory Committee – CGC Journal of Exploration in Science & Technology
- Member of Advisory Board – Industrial Engineering Journal
- Supply Contracts,
- Bullwhip Effect,
- Emergency Inventory Policies,
- Vendor-Managed Inventory,
- Supply Chain Resilience,
- Preventive Maintenance

Dr. Indrajit Pal presently working as Associate Professor and Chair at Disaster Preparedness, Mitigation, and Management program at the Asian Institute of Technology, Thailand. Prior to joining at AIT, Dr. Pal served as a faculty member at Centre for Disaster Management at Lal Bahadur Shastri National Academy of Administration, Mussoorie, India (Premier National Institute for training Indian Administrative Services Officers). Dr. Pal having 21 years of extensive work on disaster risk governance and policy, vulnerability and risk assessment, capacity development of decision-makers, coastal and delta resilience, critical infrastructure functional risk, systemic and cascading risk. Dr. Pal has written 15 books and more than 100 articles in international and national peer-reviewed journals.

Prof. Joyashree Roy

Position Distinguished Professor and Director Unit SMARTs Center (South and South-East Asia Multidisciplinary Applied Research Network for Transforming Societies of Global South) Contact Info (+66-2) 524 5779 524 5779) joyashree@ait.asia PROFILE EDUCATION EXPERTISE AWARDS AND HONORS SELECTED PUBLICATIONS

Joyashree Roy is currently the Distinguished Professor at the Asian Institute of Technology. She is also the Founder Director of the Centre on South and South East Asia Multidisciplinary Applied Research Network on Transforming Societies of Global South (SMARTs) and the Inaugural Bangabandhu Chair Professor (2018-2022, July) at the Asian Institute of Technology, Thailand. She is also currently the Honorary Professor at Centre for Disaster Management and Research (CDMR) at IIT, Guwahati, India. She is the Founding advisor of the two multi-year projects at Jadavpur University: Global Change Programme and SYLFF-JU programme. She is the former Professor of Economics in Jadavpur University, India. She is a national fellow of the Indian Council of Social Sciences Research (ICSSR). She was a Ford Foundation Postdoctoral Fellow at LBNL, Berkeley, USA. She is the recipient of the 2021 Paradigm award of The Breakthrough Institute, USA. She was in IPCC-2007 Nobel Peace Prize winning panel and continues as Coordinating Lead Author in Fifth and Sixth assessment cycles of WGIII of IPCC. In Sixth Assessment Cycle IPCC is also the co sharer of Gulbenkian Prize 2022. She has been a chapter author of Global Energy Assessment, has been associated with the Stern Review Report and many other global and National,

Subnational Reports. She is in the winning team of 2012 Prince Sultan Bin Aziz creativity award for water. She has published more than 176 peer reviewed journal articles, authored and edited books. She is in the Steering/advisory committee of several national and International science-policy interactive platforms and in editorial boards of many international journals. Her research interests are: Resource and Environmental Economics, Economics of Pollution and Climate Change, Modeling industrial and other sectoral energy demand, Economy-wide modeling exercises for deriving policy implications, Water quality demand modeling, Water, Energy, Carbon pricing, Sustainable development, Natural resource accounting, Valuing environmental services, Developmental and environmental issues relevant for informal sectors, Coastal Ecosystem service evaluation. She features in the documentary Juice: How Electricity Explains the World which explains among other things how developing countries are trying to bring people out of the dark and to the lights and transforming lives. She is listed among the world's top 2% of influential scientists in the field of Energy as per rankings published by Stanford University.

- Ph.D in Economics, Jadavpur University, Kolkata, India, 1991. Concentration: Econometric Modelling of Producer Behaviour for Indian Industries to understand Demand for Energy.

Dr. Khin Myat Kyaw is adjunct faculty in Structural Engineering program and coordinator in Regional Network Office for Urban Safety (RNUS) at Asian Institute of Technology. She received her doctorate degree from University of Tokyo, Japan on 2020 and have joined Structural Engineering program at AIT on December 2023. She has been Research Associate in W. Takeuchi Lab., Institute of Industrial Science, University of Tokyo since October 2022. She's currently conducting research studies in the areas of structural health monitoring using remote sensing techniques.

- Ph.D. in Earthquake Disaster Mitigation Engineering, The University of Tokyo, Japan, 2020Topic: Soil-structure-interaction effects on the damage state of typical buildings in Yangon
- Master of Engineering in Structural Engineering, Asian Institute of Technology, Thailand, 2014Topic: Suppression of tall building responses from distance large earthquake by fluid viscous dampers
- Bachelor of Engineering in Civil Engineering, West Yangon Technological University, Myanmar, 2010
- Earthquake engineering
- Numerical modeling
- Disaster risk reduction
- Remote sensing-based Structural health monitoring.

Prof. Kunnawee Kanitpong is an accomplished academic with a Ph.D. in Civil Engineering from the University of Wisconsin-Madison, USA (2005). Her educational journey also includes earning an M.S. in Civil Engineering from the University of Maryland at College Park. With a specialization in

Highway Materials and a focus on Transportation Engineering, she has made significant contributions to the field. Her expertise extends to teaching and research, making her a valuable asset to the academic community. Prof. Kunawee has been actively involved in the Transportation Engineering Program at the Asian Institute of Technology as an Associate Professor. Her dedication to education is evident through her contributions to off-campus educational management at the bachelor's degree level, displaying a commitment to both research and teaching.

Dr.Kuo-Chieh Chao

Position Associate Professor, Head of CIE Department Director of ACSIG Unit Civil and Infrastructure Engineering (CIE) Faculty of Infrastructure Contact Info (662) 524 5503 524 5503 geoffchao@ait.asia Media Links [Personal website](#) PROFILE EDUCATIONAL BACKGROUND RESEARCH INTERESTS TEACHING SELECTED PUBLICATIONS ONGOING AND COMPLETED PROJECTS PROFESSIONAL AFFILIATIONS RESEARCH KEYWORDS

Geoff Chao, Ph.D., P.E. has over 28 years of geotechnical and construction engineering experience. He received his Master's and Ph.D. degrees from Colorado State University, Fort Collins, Colorado, USA in 1995 and 2007, respectively. He is currently an Associate Professor at Asian Institute of Technology (AIT) in Bangkok, Thailand. Before joining AIT, he was the Vice President of Engineering Analytics, Inc., a geotechnical and environmental engineering consulting company in Fort Collins, Colorado, USA. Dr. Chao has extensive experience in the areas of geotechnical engineering design and mitigation, ground improvement, construction and design defect investigations, and construction oversight experience on a diversity of infrastructure projects. His technical specialties include rainfall-induced landslide/debris flow investigation and mitigation, unsaturated soil numerical modeling, soil/ground improvement methods, problematic soil evaluation, foundation design, soil-foundation interaction, soil behavior under dynamic loadings, and mining reclamation. Dr. Chao was an Adjunct Professor at Colorado State University. He is the co-author of a textbook titled "Foundation Engineering for Expansive Soils." Dr. Chao has authored over 50 technical papers, many of them dealing with structures on problematic soils.

- Ph.D., Department of Civil and Environmental Engineering (2007), Colorado State University, Fort Collins, Colorado, USA
- Master of Science, Department of Civil and Environmental Engineering (1995), Colorado State University, Fort Collins, Colorado, USA

- Evaluation of Rainfall-Induced Failures of Embankment Slopes due to Climate Change, Timor-Leste. Project Manager for a distress investigation to the roadways under Package R2 of the Road Network Development Sector Project (RNDSP) in Timor-Leste. Rainfall-induced slope failures due to excessive rainfall were observed at the site. The causes of the slope failures were evaluated using seepage and slope stability modeling. Climate change analysis was conducted to predict the climate conditions in the next 100 years. The predicted climate data obtained from the climate change analysis were used as an input parameter for our seepage analysis to calculate the changes of pore water pressure in the soils due to climate change. Slope stability analysis was conducted using the pore water pressure results obtained from the seepage analysis to determine the remedial measures for the embankment slopes.
- Evaluation of Debris Flow Potential by Using TRIGRS and DEBRIS-2D Programs in Nan Province, Thailand: A debris flow happened in July 2028 at a village located in Nan province, Thailand, and caused eight people to die at the event. After the disaster, the village was relocated to the Ban Na Lum area. The primary objective of the study is to evaluate the debris flow potential at the new village location to ensure the safety of the village. The TRIGRS and DEBRIS-2D software were used in the debris flow analysis. It was concluded that the village would be safe under the current climate conditions. However, there is a debris flow potential if severe weather condition occurs in the area. It was recommended that a slope stability monitoring program be set up at the project site.
- Landslide Hazard Mapping Using a Combination of Artificial Intelligence and Geotechnical Engineering Approach, Mae Yao, Thailand. Advisor for a study to map potential landslide areas in Mae Yao, Thailand, by combining the geotechnical engineering approach and the Artificial Intelligence (AI) approach. Factors affecting the landslide potential for the areas will be evaluated. A technique using the AI approach will be proposed to map large-scale landslide potential areas (ongoing research project).
- Roadway Analyses and Stabilization Plans, Colorado Springs, Colorado. Geotechnical Engineer for a distress investigation to the roadways of a large private housing development in Colorado Springs, Colorado. A majority of the distress was determined to be from settlement of soils due to inadequate construction, and inadequate compaction of fill soils. Additionally, the development had 23 active landslides on the site, and two of the landslides were causing major distress to the roadways. The investigation included geologic mapping, review of aerial photographs, excavation of borings, and laboratory testing. The borings were instrumented with piezometers and slope inclinometers, and movement has been recorded over the last several years. Plans and specifications were prepared for repair of nine areas. Construction oversight was provided during the construction of the repairs.
- Evaluation of Threshold Stress for High-Speed Railway Foundation on Bangkok Soft Clay Under Cyclic Loading, Bangkok, Thailand. Advisor for a study focused on the effect of cyclic loading on the behavior the soft clay. A high-speedrailroad foundation with a fine-grained subgrade can potentially build up excessive pore water pressure under cyclic loading from the operation of the train. The generation of the excess pore water pressure in the foundation clay could result in progressive shear failure at a stress level less than its shear strength under static loading conditions. This study showed that the shear strengths of the NC and OC Bangkok soft clays under cyclic loading could reduce up to approximately 20 and 30%, respectively, compared to those obtained from the monotonic compression tests.
- Geotechnical Investigation for Daikyo New Factory Project, Samut Prakan, Thailand. Project Manager for an investigation focused on determining the causes of the retaining wall movement and provided recommendations for remedial measures of the retaining wall. Subsoil investigation including drilling and sampling of four boreholes to the maximum boring depth of 41 m was conducted at the site. Laboratory testing was conducted to determine soil properties for our geotechnical analyses. Numerical modeling was conducted to determine the cause of the retaining wall distress. It was concluded that the soft clay had an excessive amount of movement induced by the heavy truckloads and the fill placement, which resulted in the distress of the retaining wall at the site. Options for the remedial measures were proposed in the study.
- Pavement Distress Investigation, DIA Employee Parking Lot, Denver, Colorado. Senior Geotechnical Engineer for evaluation of distress and responsible parties for an employee parking facility at Denver International Airport, Denver, Colorado. The parking facility included two parking lots and two buildings. The parking lots had an area of 57 acres and were graded and paved with hot bituminous pavement. Portions of the subgrade materials for the parking lots were lime treated. The observed pavement and building distress was caused by design and construction deficiencies, such as improper lime-treated subgrade materials, expansive soils, insufficient foundation design, etc.
- US. Army Reserve Center, Windsor, Colorado. Geotechnical Engineer of Record for the design of drilled pier foundation and pavements at the U.S. Army Reserve Center in Windsor, Colorado for the Omaha District of the US Army Corps of Engineer.
- Florence High School, Florence, Colorado. Geotechnical Engineer of Record for remediation of the grandstand at the school. The grandstand had undergone distress due to heaving of expansive soils at the site. The foundation of the grandstand was underpinned with deep straight shaft piers to stabilize the grandstand.
- FAA TRACON Facility, Denver, Colorado. Project Manager for the design of the foundation at a chiller facility constructed on highly expansive soils for the FAA at the Denver International Airport, Denver, Colorado.

- Florence Water Treatment Plant, Florence, Colorado. Geotechnical Engineer for evaluation of the heave potential and proposed foundation systems for the Florence Regional Water Treatment System. Analyses of the site indicated that the original locations of some of the structures were on highly expansive soils that would result in unacceptable levels of heave. These buildings were relocated and analyses were performed of various foundations treatment options that would allow for acceptable levels of post-construction heave.
- FAA Rocky Mountain Regional Airport, Broomfield, Colorado. Senior Geotechnical Engineer for review of the foundation design of a control tower facility for the FAA at the Rocky Mountain Regional Airport.
- Secretary-General, Southeast Asian Geotechnical Society (SEAGS)
- Editor-in-Chief, The Geotechnical Engineering Journal of the SEAGS & AGSSEA
- Professional Engineer: California, Colorado, Texas, New Mexico, Montana, and Ohio, USA

KEYWORDS

Dr Makoto Fujiu is a Professor at Kanazawa University and visiting faculty at AIT. He joined Structural Engineering Program at AIT in 2024. His research is currently focused on urban planning and disaster management and to enhance disaster preparedness.

Dr Fujiu’s work addresses the situations that arises during earthquake and flooding particularly emphasizing on ensuring the supplies of essentials and on better evacuation plans. He helps the local government with plans to respond in case of an emergency.

Dr Fujiu plays an important role in advancing sustainable disaster management practices ensuring the communities are least affected in the disaster-prone zones and the local body have a better action plan to address the situations that arises during it.

Dr. Mohana Sundaram Shanmugam

Position Assistant Professor
 Unit Water Engineering and Management (WEM)
 Department of Water Resources and Environmental Engineering (WREE)
 Contact Info +66-2-524-5796 mohanasundaram@ait.ac.th
 PROFILE EDUCATIONAL BACKGROUND RESEARCH INTERESTS
 TEACHING SELECTED PUBLICATIONS ONGOING AND COMPLETED PROJECTS
 AWARDS AND HONORS PROFESSIONAL AFFILIATIONS RESEARCH KEYWORDS

Dr. Mohana Sundaram Shanmugam is an assistant professor at Water Engineering and Management program in the School of Engineering and Technology, Asian Institute of Technology Thailand. His research interests include irrigation water management, groundwater assessment and management, water quality monitoring and modelling, chemical leaching assessment, remote sensing and GIS applications for crop water management.

- Postdoctoral research associate in Nebraska Water Center, University of Nebraska-Lincoln, USA (2018)
- Ph.D in Water Resources Engineering. Indian Institute of Technology Madras, India (2016)
- M.Tech in Agricultural Systems and Management. Indian Institute of Technology Kharagpur, India (2009)
- B.Tech in Agricultural Engineering. Tamil Nadu Agricultural University, India (2007)

Research interests include crop water management, climate change impacts on crop systems, water level and water quality monitoring with remote sensing data and methods.

Dr. Mongkol Ekpanyapong is an Associate Professor and Department Head at the Asian Institute of Technology (AIT), Thailand. With expertise in VLSI design, physical design automation, microarchitecture, compiler, Embedded Systems, Mechatronics, and Computer Vision, he has made significant contributions to these fields. Dr. Ekpanyapong has conducted research on topics such as highly-sensitive surface-enhanced Raman spectroscopy-based chemical sensors using 3D graphene foam decorated with silver nanoparticles. He is dedicated to advancing knowledge and innovation in his areas of interest, enhancing both academic and industrial landscapes.

Dr. Mukand S. Babel is Professor of the Water Engineering and Management (WEM) Program and Director of the Centre for Water and Climate Adaptation (CWCA) at the Asian Institute of Technology (AIT), Thailand. He is also Adjunct Professor, at UNU-FLORES, Germany, Honorary Professor at the University of Exeter, UK, Honorary Professor at the Indian Institute of Technology Guwahati, India, and Visiting Professor at the Indian Institute of Technology Roorkee, India. His professional experience in teaching, research, and consultancy spans 40 years mainly in Asia in fields of hydrological and water resources modelling; integrated water resources management; water supply and sanitation; climate change impact and adaptation; flood and drought analysis, forecasting, and management and Water-Energy-Food Nexus. He has co-authored more than 190 journal articles in high impact factor international journals with a current h-index of 44.

- D. Eng. In Water Resources Engineering, Asian Institute of Technology, Thailand (1993)
- M. Eng. In Soil and Water Engineering, Asian Institute of Technology, Thailand (1983)
- B. Eng. with Honors in Agricultural Engineering, Rajasthan Agricultural University, India (1981)

Climate change risks, impacts, vulnerability and adaptation in water and agriculture sectors; Drought and flood risk assessment and management; Hydrology; Hydrologic and water resources modelling; Integrated water resources management; Groundwater modelling and management; Monitoring and Evaluation frameworks for water sector; Water security assessment and enhancement; Water supply and sanitation; Water-energy-food nexus.

Dr. Natthachet Tangdamrongsub is an assistant professor of the Water Engineering and Management Program. His research interests include land surface modeling, data assimilation, artificial intelligence, and satellite geodesy and remote sensing. He focuses on integrating satellite Earth observations (e.g., soil moisture, terrestrial water storage, surface water) with model estimates to address grand challenges in water resources, climate, and natural hazards at both global and regional scales.

- 2007 – 2012: PhD, Civil Engineering, National Chiao Tung University, Taiwan
- 2005 – 2007: MSE., Radio Astronomy and Space Sciences, Chalmers University of Technology, Sweden
- 2000 – 2004: BEng, Electrical Engineering, Thammasat University, Thailand

His research interests are Remote sensing of environment, Hydrology and land surface modeling, Data assimilation, Artificial intelligence, Natural hazards, Flood and drought analysis, Climate change, and Statistical optimization

Dr. Naveed Anwar, a distinguished Pakistani-born structural engineer, serves as the CEO of CSI Bangkok and previously held the role of Vice President for Knowledge Transfer at the Asian Institute of Technology (AIT). With over 40 years of experience, he has contributed extensively to civil and structural engineering knowledge through teaching, research supervision, publications, and international project engagement. Dr. Anwar's expertise spans various domains including finite element modeling, advanced concrete design, and performance-based design of tall buildings. As an academician, he has supervised over 50 MS and PhD research theses, authored numerous publications, and delivered keynote speeches at international conferences. His commitment to knowledge transfer is evident through his leadership in initiatives such as ACECOMS and AIT

Solutions, as well as his involvement in capacity-building seminars and workshops across multiple countries. Dr. Anwar's dedication to integrating emerging technologies into structural engineering reflects his forward-thinking approach to education and innovation within the field.

- Ph.D. in Structural Engineering, Asian Institute of Technology, Thailand (2004)
- M.Eng. in Structural Engineering, Asian Institute of Technology, Thailand (1988)
- B.Sc. in Civil Engineering, University of Engineering & Technology, Lahore (1982)
- Structural engineering, software development, and sustainable infrastructure at the nexus of research.
- Specialization in performance-based design methodologies to enhance building and infrastructure resilience and efficiency.
- Expertise in structural analysis software development and seismic evaluation and retrofitting techniques.
- Focus on advancing engineering solutions for affordable housing, disaster resilience, and sustainable urban development.
- Multilingual proficiency facilitating collaboration in international research and consultancy projects tackling global infrastructure challenges.

Regular courses:

- CE72.52: Advanced Concrete Structures
- CE72.33: Structural Design of Tall Buildings

PMTB/ Online courses:

- CE75.08: Design of Reinforced Concrete Components
- CE75.01: Design of Tall Buildings
- CE75.07: Performance Based Seismic Design

Academic Research:

- Naveed A., "Component-Based Information Oriented Framework for Integrated Structural Engineering Applications", AIT Diss no. ST-04-1, 2004, Asian Institute of Technology Bangkok

Ongoing Projects:

- Development of CSiBridge program, funding: CSI
- Structural Design of shop drawings – Acrpolis Building, funding: Unique Group
- Structural Code Based Design – Banani Building, funding: Unique Group

Completed Projects:

- Design Review of Precast Concrete Wall, funding: Pruska Real Estate
 - Forensic Investigation on WSB Project, funding: Makati Development Corporation
 - Talimarjan Power Project, funding: ADB
 - Effective Bridge Management System, funding: AIT Consulting
-
- Award of Appreciation from ACBM-CI Committee, during the International Conference on Advances in Cement Based Materials and Applications in Civil Infrastructure (ACBM-CI) Pakistan, as invited research presenter, dated 12-14 December 2007
 - Award of Appreciation from CBM-CI Committee, during the International Conference on Cement Based Materials and Applications in Civil Infrastructure (CBM-CI), Pakistan, as invited research presenter, dated 10-11 December 2007
 - Award of Appreciation from Universities Atma Jaya Yogyakarta, Indonesia, during the National Seminar in Civil Engineering as invited lecturer, dated 09 November 2007
 - Award of Appreciation from Angeles University Foundation, Angeles City, Philippines during International Seminar on Graphical Modeling for Structural Analysis and Design and Detailing and Pushover Analysis for Performance Based Design of Buildings for being key speaker on title Graphical Modeling for Structural Analysis, Design and Detailing and Pushover Analysis for Performance Based Design of Buildings, dated 18 Oct 2006
 - Award of Appreciation from Angeles University Foundation, Angeles City, Philippines during International Civil Engineering Education Congress 2006 and 7th National Civil Engineering Education Congress 2006 as keynote speaker on title Visualization Techniques for Innovative Teaching and Learning, dated 19 Oct 2006
 - Award of Appreciation from Association of Structural Engineers of the Philippines Inc, Philippines during ACEE 2006 2nd Asia Conference on Earthquake Engineering as key speaker on title Seismic Analysis and Design of Buildings and Effective Modeling and Seismic Design of Bridge Structures, dated 10-11 March 2006
 - Award of Appreciation from The Institute of Engineering, and University of Malaysia Sarawak, Malaysia during Workshop on Computer Aided Analysis and Design key speaker on title Finite Element Analysis and Design of RC Buildings, dated 25-26 May 2005
 - Award of Appreciation from Mapua Institute of Technology, Manila, Philippines during International Seminar on Computations in Civil Engineering as key speaker on title Computations in Civil Engineering, dated 23 May 2005
 - Award of Appreciation from Association of Structural Engineers of the Philippines Inc, Philippines during 11th ASEP International Convention as speaker on title Integrated Flexural Design for Serviceability, Strength and Performance, dated 20-21 May 2005
 - Award of Appreciation from Angeles University Foundation, Angeles City, Philippines during Regional Seminar in Civil Engineering Computations as keynote speaker on title in Civil Engineering Computations, dated 19 May 2005
 - Award of Appreciation from Civil Engineering Dept. U.E.T. Lahore, Pakistan during International Seminar on Computer Aided Analysis and Design of Structures as guest speaker on title Computer Aided Analysis and Design of Structures, dated 5 April 2005
 - Award of Appreciation from Philippine Institute of Civil Engineers Inc, Cebu, Philippines during Annual General Membership Meeting as key speaker on title Various Computer Applications for Civil Engineering, dated 30 for Civil Engineering, dated 30 September 2004
 - Award of Appreciation from University of San Jose Recoletos, Cebu, Philippines during Seminar on Finite Element Analysis of Structures as key speaker on title Finite Element Analysis of Structures, dated 29 September 2004
 - Award of Appreciation from Association of Structural Engineers of the Philippines Inc, Philippines during Seminar on Analysis and Design of RC Structural Systems as key speaker on title Analysis and Design of RC Structural Systems, dated 25 September 2004
 - Award of Appreciation from Association of Structural Engineers of the Philippines Inc, Philippines during Seminar on Performance Based Design and Push-Over Analysis of Buildings as key speaker on title Performance Based Design and Push-Over Analysis of Buildings, dated 18-19 June 2004
 - Award of Appreciation from De La Salle University, College of Engineering, Philippines during International Seminar on Modeling, Analysis and Design of Bridge Structures as key speaker on title Modeling, Analysis and Design of Bridge Structures, dated 22-23 August 2003
 - Award of Appreciation from De La Salle University, College of Engineering, Philippines during International Seminar on Finite Element Analysis of Structures as key speaker on title Finite Element Analysis of Structures Strengthening and Retrofitting of Concrete Structures, dated 7-8 March 2003
 - Award of Appreciation from The Institution of Engineers, Malaysia during A 2-Day Intensive Course on "Practical Computer Modeling and Design of High Rise Buildings to BS8110 from Consulting Engineer's Perspective as key speaker on title Practical Computer Modeling and Design of

High Rise Buildings to BS8110 from Consulting Engineer's Perspective, dated 23-24 August 2002

- Award of Appreciation from De La Salle University, College of Engineering, Philippines during International Seminar on "Advanced Integrated Analysis and Design of Tall Buildings" as key speaker on title Advanced Integrated Analysis and Design of Tall Buildings, dated 4-5 June 2002
- Award of Appreciation from University of Engineering and Technology, Lahore, Pakistan during International Seminar on Computer Aided Analysis and Design as key speaker on title Computer Aided Analysis and Design, dated 1-2 August 2002
- Award of Appreciation from NED University of Engineering and Technology, Karachi, Pakistan during International Seminar on Computer Aided Analysis and Design as key speaker on title Computer Aided Analysis and Design, dated 18-19 January 2002
- Award of Appreciation from The Institution of Engineers, Malaysia during Seminar on Computer Aided Analysis and Design of Concrete Structures as key speaker on title Computer Aided Analysis and Design of Concrete Structures, dated 9-10 May 2001
- Award of Appreciation from Baguio Colleges Foundation, Baguio, Philippines during International Workshop on Integrated Analysis and Design of Buildings in 3D as key speaker on title Integrated Analysis and Design of Buildings in 3D, dated 21-22 November 2001
- Award of Appreciation from Cor Jesu College, Digos, Davao Del Sur and Philippine Institute of Civil Engineers, Philippines during PICE-IBC Mindanao Regional Technical Seminar in 3D as key speaker on title An Integrated Overview of Structural Engineering and Structural Design, dated 28 April 2001
- Founder & Chief Executive Officer, CSI Bangkok Company Ltd., Thailand
- Secretary, AIT Consulting Advisory Board and Technical Council, Thailand
- Chairman, AIT-Pakistan Task Force
- Chair, IFM Outsourcing Contract
- Coordinator, Technical Working Group (TWG) at Professional Master Program for Civil Engineering Practices
- Chief Editor, ACECOMS Civil Computing Magazine
- Software design and development
- Finite element analysis
- Structural modeling and analysis
- Design engineering and optimization
- Performance based design and design evaluation of tall buildings

Prof. Kim Oanh is the Distinguished Professor of the Environmental Engineering and Management Program at the Asian Institute of Technology (AIT), Thailand. She is also the founding Director of Center for Nexus of Air Quality, Health, Ecosystem, and Climate at AIT. She has over 35 years of working experience in research, education, consultancy, and capacity building and is internationally recognized for her work on air pollution and climate in Asia with a focus on Southeast Asia. She spends untiring efforts to provide a better characterization of air pollution issues in Asian developing countries through field measurements, emission inventory, and modeling studies at urban, national, and regional scales. She has published 2 books (ed.), 130+ international peer-reviewed scientific papers, 45+ book chapters, and 60+ important development reports. With her extensive experience and professional networking capacity she has conducted, as PI or Co-PI, 60+ regional collaboration research projects. She also organized, co-organized, and served as a key resource person for 200+ training courses in air quality and climate related topics. Under her supervision as the advisor, as of 2024, there are 145 Master's and 16 Ph D AIT graduates who are now working in Asia and beyond. Professor Kim Oanh has taken sabbaticals at the University of Washington in Seattle and University of Illinois at Urbana Champaign, USA (2004), and the Institute for Advanced Sustainability Studies, Germany (2012).

Nitin Kumar Tripathi is a Professor in Remote Sensing (RS) and Geographical Information Systems (GIS) in Asian Institute of Technology (AIT), Thailand as with over 35 years' experience in teaching, research and projects. Currently, he is Vice President of Academic Affairs in AIT. Apart from his regular responsibilities of teaching and research at AIT, he has also served as the Leader of Information and Communication Technology (ICT) and Coordinator for the RS and GIS field of study. He has earlier served in various administrative positions in AIT such as Dean-School of Engineering and Technology, Director- Academic Quality Assurance and Accreditation, Chairman- Academic Development Review Committee, Director-Unified Program and Chairman Academic senate of AIT.

Prof Tripathi was actively involved as Life Members in Indian Society of Remote Sensing and Indian Society of Geomatics. He also served as Life Members of Institution of Engineers – India and Indian Society of Technical education-India. He was active member of Asian Conference on Remote Sensing and launched the first Asian Journal of Geoinformatics from AIT in the year 2001. He is Editor in Chief of International Journal of Geoinformatics that he launched in 2005. He is in editorial board of Journal of Remote Sensing published by Springer and ISRS journal Published by Taylor and Francis. He has been serving on the advisory board of a number of international journals.

Dr.Nurul Husna Hassan

PositionAssistant ProfessorUnitWater Engineering and Management (WEM)Department of Water Resources and Environmental Engineering (WREE)Contact Info nurulhusna@ait.asia Media Links [Personal website](#) PROFILEEDUCATIONAL BACKGROUNDRESEARCH INTERESTSTEACHINGSELECTED PUBLICATIONSONGOING AND COMPLETED PROJECTSAWARDS AND HONORSPROFESSIONAL AFFILIATIONSRESEARCH KEYWORDS

Dr. Nurul Husna is an Assistant Professor in the Water Engineering and Management program at the School of Engineering and Technology, Asian Institute of Technology, Thailand. Her research focuses on hydraulic and hydrologic engineering, hydraulic physical modeling, energy sustainability, computational fluid dynamics (CFD), and fluid–structure interaction in hydraulic structures. She has developed technical and field experience, particularly at dam spillway sites in Malaysia, enhancing her practical expertise in hydraulic engineering. Dr. Nurul Husna has actively contributed to projects on dam safety by integrating computational, experimental, and field-based approaches. Her work also explores innovative and sustainable water management technologies to support climate resilience and infrastructure reliability. She received the Best Thesis Award/Research Development Award (World Water Day 2025) from the Malaysia Department of Irrigation and Drainage and several Gold Awards from SIIF, IPITEX, iCAN, and ITEX. She has also served as an invited lecturer for Hydrology and Engineering Geology at Henan Vocational College of Water Conservancy and Environment, China.

An international expert in wastewater management and environmental impact assessment, he is currently strongly interested in ecological engineering. Founder of the unique AIT Freshwater Mangrove Museum, he developed novel Eco-technology which underpins its sustainable performance. He was a long-term director of AIT WHO Collaborating Centre for water supply and waste disposal in 2004-2017. Knowledge of global geographic, ethnic, zoological and botanical diversity informs his extensive experience in developing and developed communities on as many as five continents. Having received his Ph.D. in Eco-Microbiology in Russia (1986) he worked for the Academy of Sciences on biotechnology until 1990. He then moved over to South Africa to do R & D in prominent universities and advise to infrastructure development & consulting companies on global water and waste issues. He moved over to AIT from South Africa in 2002.

PhD, Microbiology, Inst. of Biochemistry and Physiology of Microorganisms, Puschino, Moscow region, Russia (1986)

MSc, Biochemistry, Saratov State University, Saratov, Russia (1981)

Water and wastewater related courses of the South African Institution of Civil Engineering (SAICE), SA Association of Consulting Engineers (SAACE) and University of Pretoria (1998-2000)

- M.Sc. in Biological chemistry, Biological Faculty, Saratov State University, Russia (1981)
- Ph.D. in Ecological Microbiology, Centre for Biological Research in Pushchino-on-Oka, Moscow Region, Russia (1986)
- Wastewater treatment courses, South African Institution of Civil Engineering (SAICE), South African Association of Consulting Engineers (SAACE), and University of Pretoria (1998-2002)

Research focuses on advancing earthquake and tsunami engineering through physics-based numerical modeling, nonlinear structural response analysis, and integrated earthquake simulation. Therefore, a multi-hazard risk assessment tool is being developed, incorporating statistical modeling and uncertainty quantification to enhance disaster resilience. The work integrates coupling systems for large-scale analysis and utilizes parallel programming on CPUs and GPUs to accelerate computational simulations. The goal is to bridge fundamental research with real-world applications for improving the accuracy and efficiency of disaster risk assessments

Dr. Pennung Warnitchai is professor and chair of Structural Engineering program at Asian Institute of Technology. He received his doctorate degree from University of Tokyo, Japan on 1990 and have joined Structural Engineering program at AIT since 1992. He is supervising master and doctoral students and conducting research studies in the areas of structural dynamics, bridge engineering, earthquake engineering, and wind effects on structures.

- Development of A Catastrophe Model for Evaluating Seismic Losses and Impacts in Chiang Mai and Chiang Rai (Year 2) Thailand (2023 – 2024) (on-going) Role: Project Leader; Sponsor: National Research Council of Thailand (NRCT); Project duration: April 2023 to April 2024; Total budget: 3,874,000 Baht; Overhead: 334,000 Baht; Payroll Recovery Cost: 94,000 Baht
- Development of A Catastrophe Model for Evaluating Seismic Losses and Impacts in Chiang Mai and Chiang Rai (Year 1) Thailand (2022-2023) (on-going) Role: Project Leader; Sponsor: National Research Council of Thailand (NRCT); Project duration: April 2022 to March 2023 (extended to present); Total budget: 4,212,000 Baht; Overhead: 312,000 Baht; Payroll Recovery Cost: 93,332 Baht
- Seismic Resistant Design Procedure for Tall Buildings in Thailand (2018-2021) Role: Project Leader; Sponsor: Thailand Research Fund (TRF); Project duration: September 2018 to June 2021; Total budget: 3,624,000 Baht; Overhead: 2,400+92,000+148,235 Baht; Faculty time income: 211,765 Baht
- Tsunami Hazard Evaluation in Thailand and Tsunami Evacuation Simulation for Identifying Effective Disaster Risk Reduction Measures (2018-2021) Role: Project Leader; Sponsor: Thailand Research Fund (TRF); Project duration: September 2018 to June 2021; Total budget: 3,228,340 Baht; Overhead: 4000+51,769+148,240 Baht; Faculty time income: 211,711 Baht
- Mitigation of Seismic Risk of Tall Buildings in Bangkok Metropolitan Area from Large Distant Earthquakes (2015-2019) Role: Project Leader; Sponsor: Thailand Research Fund (TRF); Project duration: August 2015 to April 2019; Total budget: 3,368,000 Baht; Overhead: 596,659 Baht; Faculty time income: 236,352 Baht
- Seismic Hazard and Risk Assessment of Six Cities in Bangladesh (2012-2014) Role: Project Leader; Sponsor & Partner: Asian Disaster Preparedness Center (ADPC); Project duration: August 1st, 2012 to August 31st, 2014; Total budget: 5,800,000 Baht; Overhead: 596,659 Baht; Faculty time income: 236,352 Baht
- Action Plan for Earthquake Disaster Prevention and Mitigation in Bangkok (2012-2014) Role: Project Leader; Sponsor & Partner: Panya Consultants Co Ltd.; Project duration: November 15st, 2012 to March 31st, 2014; Total budget: 8,560,000 Baht; AIT Solutions Project
- Structural peer review of Buddha Statue, Thailand (2012-2013) Role: Project Initiator and Leader; Budget: 980,000 Baht; Client: The Crown Property Bureau; AIT Solutions Project.
- Development of Probabilistic Seismic Hazard Map for Manila, Philippines (2011-2011) Role: Principal Seismic Hazard Analyst; Budget: 3,000,000 Baht (100,000 USD); Client: Sy²+Associates, Inc., Philippines; AIT Solutions Project.
- Structural Integrity Evaluation of the Burapa Withi Expressway (2010-2014) Role: Project Leader; Sponsor: Expressway Authority of Thailand (EXAT); Project duration: June 1st, 2010 to February 28th, 2014; Total budget: 26,980,000 Baht; Overhead: 1,874,280 Baht; Faculty time income: 456,000 Baht.
- 2015 ASEAN Federation of Engineering Organization (AFEO) Honorary Member Award, received on November 25, 2015 during the 33th Conference of AFEO (CAFE033) at Penang, Malaysia.
- 2012 Award for Innovative Scientific Research Project with High Social Impact for Year 2012, awarded by the Committee on Science, Technology and Telecommunications of Senate of Thailand for research project on earthquake risk mitigation in Thailand.
- 2010 TRF's Excellent Research Award for Year 2010, awarded by the Thailand Research Fund (TRF) for the research program entitled "Earthquake Disaster Mitigation in Thailand—Phases I and II (2002-2010)". The research program was selected for this award due to its great impact to the earthquake disaster preparedness of the country. This program was executed by a team of 17 researchers from 6 universities and 2 government agencies in Thailand. Dr. Pennung was the research program leader.
- 1987-1990 The Hitachi Scholarship, awarded by the Hitachi Scholarship Foundation to study at the University of Tokyo (D. Eng. program)
- 1982-1985 The Japanese Government Scholarship, awarded by the Ministry of Education of Japan to study at the University of Tokyo (M. Eng. program)
- 1982 First Class Honors, awarded by Faculty of Engineering, Chulalongkorn University, for outstanding academic performance in the B. Eng. Program.
- Founding Director of Earthquake Research Center of Thailand (EARTH), 2023-2025.
- Leader of a Research Program of National Research Council of Thailand (NRCT) on Mitigation of Seismic Risk in Thailand, 2022-present.
- Expert Member of National Disaster Warning System Executive Committee, 2022-present.
- National Delegate of Thailand in the International Association for Earthquake Engineering (IAEE), 2021-2025.
- Commissioner, Extraordinary Commission to Investigate the Critical Delay of the New Parliament Building Construction Project, 2019-2020. Appointed by the House of Representatives of Thailand.
- Leader of a Research Program of Thailand Research Fund (TRF) on Mitigation of Seismic Risk in Thailand, 2001-2021.
- Science Board Member, The Global Earthquake Model (GEM), 2012-2019.

- Chair, Chapter on the Effects of Earthquakes and Wind Loads, Engineering Institute of Thailand under H.M. the King's Patronage (EIT), 2002-2016.
- Director, World Seismic Safety Initiative (WSSI), International Association for Earthquake Engineering (IAEE), January 2010-2016.
- Structural dynamics,
- Earthquake engineering,
- Wind engineering,
- Seismic hazard assessment,
- bridge engineering,
- vibration control

Prof. Sangam Shrestha

Position Professor, Director Unit School of Engineering and Technology / Global Water Sanitation Center Contact Info [\(662\) 524 6055](tel:6625246055), [\(662\) 524 6022](tel:6625246022), [\(662\) 524 6054](tel:6625246054) 524 6055, (662) 524 6022, (662) 524 6054 sangam@ait.ac.th Media Links [Personal website](#) PROFILE EDUCATIONAL BACKGROUND RESEARCH INTERESTS TEACHING SELECTED PUBLICATIONS ONGOING AND COMPLETED PROJECTS AWARDS AND HONORS PROFESSIONAL AFFILIATIONS RESEARCH KEYWORDS

Dr. Sangam Shrestha is a Dean of School of Engineering and Technology and Professor of Water Engineering and Management at the Asian Institute of Technology, Thailand. He is also founding Co-Director of Global Water & Sanitation Center at AIT. Dr. Shrestha is also a Visiting Professor of Beijing Normal University in China, University of Yamanashi, Japan, National University of Laos, and SEI Associate of Stockholm Environment Institute (SEI). His research interests are within the field of hydrology and water resources including, climate change impact assessment and adaptation in the water, integrated water resources management and groundwater assessment and management. Dr. Shrestha has published more than 200 papers in peer-reviewed international journals and presented more than 100 conference papers ranging from hydrological modelling to climate change impacts and adaptation in the water sector. Dr. Shrestha has been awarded 'Distinguished Research Leader Award' in 2015 and 2019 at AIT. Recently, he has been named as one of the world's top climate scientists in the 'Reuters Hot List' that identifies and ranks 1,000 climate academics according to how influential they are. Similarly, in 2020, 2021 & 2022 his name appeared in the top 2% list of scientists for research impact based on the most recent single year (2019, 2020 & 2021) achievement in a paper published by Stanford University researchers in PLOS Biology.

- Diploma, Connection and Flows: Water, Energy and Digital Information in the Global South, Brown University, USA (July 2013)
- Ph.D. in Integrated River Basin Management (IRBM), University of Yamanashi, Japan (2007)
- M.Sc. in Integrated Water Resources Management (IWRM), Asian Institute of Technology, Thailand (2004)
- M.Sc. in Agriculture (1 year, Major: Soil Science), Institute of Agriculture and Animal Science, Tribhuvan University, Nepal (2002)

Research and development areas include, but not limited to climate change and adaptation in water, integrated water resources management and groundwater development and management.

- CE 74.13: Water Resources Systems
- CE 74.52: Groundwater Development and Management
- CE 74.21: Irrigation and Drainage Engineering
- CE 74.15 Research Design and Experimental Methods
- CE 74.18 Climate Change and Water Resources

Below are some of the latest selected journal articles by Dr. Shrestha:

- Ghimire, S., Shrestha, S., Hok, P., Heng, S., Nittivattanaon, V., Sabo, J. (2023). Integrated assessment of climate change and reservoir operation on flow regime and fisheries of the Sekong river basin in Lao PDR and Cambodia. *Environmental Research*, 220, art. no. 115087, Publisher: Elsevier, Impact factor: 8.431(2022).
- Mohanasundaram, S., Baghel, T., Thakur, V., Udmale, P., Shrestha, S. (2023). Reconstructing NDVI and land surface temperature for cloud cover pixels of Landsat-8 images for assessing vegetation health index in the Northeast region of Thailand. *Environmental Monitoring and Assessment*, 195 (1), art. no. 211, Publisher: Springer, Impact factor: 3.307(2021).
- Aslam, R.A., Shrestha, S., Usman, M.N., Khan, S.N., Ali, S., Sharif, M.S., Sarwar, M.W., Saddique, N., Sarwar, A., Ali, M.U., Arshad, A. (2022). Integrated SWAT-MODFLOW Modeling-Based Groundwater Adaptation Policy Guidelines for Lahore, Pakistan under Projected Climate Change, and Human Development Scenarios. *Atmosphere*, 13 (12), art. no. 2001, Publisher: MDPI, Impact factor: 3.110(2022).
- Sokneth, L., Mohanasundaram, S., Shrestha, S., Babel, M.S., Virdis, S.G.P. (2022). Evaluating aquifer stress and resilience with GRACE information at different spatial scales in Cambodia. *Hydrogeology Journal*, 30 (8), pp. 2359–2377, Publisher: Springer, Impact factor: 3.151(2021).
- Nontikansak, P., Shrestha, S., Shanmugam, M.S., Loc, H.H., Virdis, S.G.P. (2022). Rainfall extremes under climate change in the Pasak River Basin, Thailand *Journal of Water and Climate Change*, 13 (10), pp. 3729–3746, Publisher: IWA Publishing, Impact factor: 2.803(2022).
- Hu, X., Hu, M., Zhu, Y., Wang, G., Xue, B., Shrestha, S. (2022). Phytoplankton community variation and ecological health assessment for impounded lakes along the eastern route of China's South-to-North Water Diversion Project. *Journal of Environmental Management*, 318, art. no. 115561, Publisher: Elsevier, Impact factor: 8.91(2022). Citation: 4
- Han, Q., Zhou, L., Sun, W., Wang, G., Shrestha, S., Xue, B., Li, Z. (2022). Assessing alterations of water level due to environmental water allocation at multiple temporal scales and its impact on water quality in Baiyangdian Lake, China. *Environmental Research*, 212, art. no. 113366, Publisher: Elsevier, Impact factor: 8.431(2022).
- Wang, L., Wang, G., Xue, B., A, Y., Fang, Q., Shrestha, S. (2022) Spatiotemporal variations in evapotranspiration and its influencing factors in the semiarid Hailar river basin, Northern China. *Environmental Research*, 212, art. no. 113275, Publisher: Elsevier, Impact factor: 8.431(2022).
- Zhou, L., Sun, W., Han, Q., Bastola, S., Wang, G., Shrestha, S., Tong, R., Xue, B. (2022) Evaluating the influence of different environmental water allocation schemes on the water level of a typical shallow lake in semiarid regions: From the perspective of an integrated modeling approach. *Environmental Research*, 212, art. no. 112991, Publisher: Elsevier, Impact factor: 8.431(2022).
- Chathuranika, I.M., Gunathilake, M.B., Baddewela, P.K., Sachinthanie, E., Babel, M.S., Shrestha, S., Jha, M.K., Rathnayake, U.S. (2022). Comparison of Two Hydrological Models, HEC-HMS, and SWAT in Runoff Estimation: Application to Huai Bang Sai Tropical Watershed, Thailand. *Fluids*, 7 (8), art. no. 267, Publisher: MDPI
- Muenratch, P., Nguyen, T.P.L., Shrestha, S., Chatterjee, J.S., Virdis, S.G.P. (2022). Governance and policy responses to anthropogenic and climate pressures on groundwater resources in the Greater Mekong Subregion urbanizing cities *Groundwater for Sustainable Development*, 18, art. no. 100791, Publisher: Elsevier, Impact factor: 6.27(2021).
- Pinsri, P., Shrestha, S., KC, S., Mohanasundaram, S., Virdis, S.G.P., Nguyen, T.P.L., Chaowiwat, W. (2022). Assessing the future climate change, land use change, and abstraction impacts on groundwater resources in the Tak Special Economic Zone, Thailand. *Environmental Research*, 211, art. no. 113026, Publisher: Elsevier, Impact factor: 8.431(2022).
- Fang, Q., Wang, G., Zhang, S., Peng, Y., Xue, B., Cao, Y., Shrestha, S. (2022). A novel ecohydrological model by capturing variations in climate change and vegetation coverage in a semi-arid region of China. *Environmental Research*, 211, art. no. 113085, Publisher: Elsevier, Impact factor: 8.431(2022).
- Buhay Bucton, B.G., Shrestha, S., KC, S., Mohanasundaram, S., Virdis, S.G.P., Chaowiwat, W. (2022) Impacts of climate and land use change on groundwater recharge under shared socioeconomic pathways: A case of Siem Reap, Cambodia. *Environmental Research*, 211, art. no. 113070, Publisher: Elsevier, Impact factor: 8.431(2022).
- Baghel, T., Babel, M.S., Shrestha, S., Salin, K.R., Virdis, S.G.P., Shinde, V.R. (2022). A generalized methodology for ranking climate models based on climate indices for sector-specific studies: An application to the Mekong sub-basin. *Science of the Total Environment*, 829, art. no. 154551, Publisher: Elsevier, Impact factor: 10.75(2022).

For more information, download Dr. Shrestha's Full CV.

See latest information below on on-going and completed projects by Dr. Shrestha. For more information, please download his Full CV.

- Establishment of Global Water & Sanitation Center at AIT (GWSC) Funding: Bill & Melinda Gates Foundation (BMGF) Period: October 2022 – October 2025; Total Budget: US\$ 8.1 million; Role: PI (with Prof. Thammarat Koottatep)
- Climate Change Adaptation in Agriculture for Enhanced Recovery and Sustainability of Highlands (ADB TA 9993) Funding: Asian Development Bank (ADB) Period: March 2020 –December 2023; Total Budget: US\$ 2 million; Role: PI (with Prof. Mukand S. Babel)
- Strengthening groundwater governance in rapidly urbanizing areas of the Lower Mekong Region (GIRA) Funding: Stockholm Environment Institute (SEI)- Asia Period: March 2020 –June 2023; Total Budget: US\$ 200,000; Role: PI
- Climate Change Adaptation in Agriculture for Enhanced Recovery and Sustainability of Highlands (CC Thailand) Funding: Asian Development Bank (ADB) Period: March 2020 –December 2023; Total Budget: US\$ 20,000; Role: PI
- Safeguarding the Regional Food Security under Climate Change impacts via mainstreaming Nature-based Solutions-centered adaptation strategies (NAFOS) Funding: Asia-Pacific Network for Global Change Research (APN) Period: December 2022 –September 2024; Total Budget:

US\$ 99,350; Role: Co-PI (with Dr. Ho Huu Loc)

- Assessment of Groundwater Sustainability in the Special Economic Zone of Thailand for Operational Groundwater Management (GISA) Funding: Stockholm Environment Institute (SEI)- Asia Period: December 2020 – June 2023; Total Budget: US\$ 45,000; Role: PI
- Towards mainstreaming the Ecosystem-based Adaptations for Sustainable Groundwater Resources Management in the Transboundary Cambodia-Viet Nam Mekong Delta Aquifer, Lower Mekong Region (GEBA) Funding: Stockholm Environment Institute (SEI)- Asia Period: June 2021 – June 2023; Total Budget: US\$ 45,000; Role: Co-PI (with Dr. Ho Huu Loc)
- Climate change risk assessment for Southeast Asian lakes (CCRASEAL) Funding: Asia-Pacific Network for Global Change Research (APN) Period: October 2020 – September 2023; Total Budget: US\$ 92,000; Role: Co-PI (with Dr. Salvatore Viridis)
- ICUE 2022 on Energy, Environment and Climate Change Funding: Conference Period: November 2021 – March 2023; Total Budget: US\$ 60,000; Role: Co-PI (with Dr. Wenchao Xue)
- Water Resources Management in the Mekong River Basin (Water Mekong) Funding: United States Agency for International Development (USAID) Period: January 2020–September 2022; Total Budget: US\$ 120,000; Role: PI
- Sustainable groundwater management under socio-economic and climate change in Mekong Delta, Vietnam (GW-Mekong) Funding: United States Agency for International Development (USAID) Period: January 2020–December 2023; Total Budget: US\$ 25,000; Role: PI
- Connecting climate change, hydrology & fisheries for energy and food security in Lower Mekong Basin (CC-HYDRO) Funding: United States Agency for International Development (USAID) Period: January 2017 – December 2020; Total Budget: US\$ 210,000; Role: PI (with Dr. Vilas Nittivatanon, Co-PI) Overhead: Baht 857,095.00, Faculty time: –, Student Scholarships/Fellowships: Baht 448,000.00
- Mapping groundwater resilience to climate change and human development in Asian cities (GROUNDWATER-ASIA) Funding: Asia Pacific Network for Global Change Research (APN) Period: September 2018 – August 2021; Total Budget: US\$ 92,900; Role: PI Overhead: –, Faculty time: –; Student Scholarships/Fellowships: Baht 1,134,000.00
- A comparative study of global and local model for climate change impact assessment in Asia region (HYDRO-ASIA) Funding: Sejong University Industry Academy Cooperation Foundation, Korea Period: January 2018 – December 2019; Total Budget: US\$ 92,300; Role: PI Overhead: Baht 426,266.85, Faculty time: Baht 175,000; Student Scholarships/Fellowships: Baht 264,000.
- World's top climate scientists (out of 1,000 climate academics) in the 'Reuters Hot List' in 2021.
- Top 2% list of scientists for research impact based on the most recent single year (2019, 2020, 2021 & 2023) achievement in a paper published by Stanford University researchers in PLOS Biology.
- Awarded "AIT Distinguished Researcher Awards" for 2019 by Asian Institute of Technology.
- Awarded "Groundwater Award 2019" for significant contribution in groundwater research in Nepal by Nepal-National Water Week 2019.
- Awarded "AIT Distinguished Researcher Awards" for 2015 by Asian Institute of Technology.
- Designated as "NPA Ambassador for the Nepal PhD Association (NPA) International Chapter in Thailand."
- Nominated (among 3 top scientist) for "Young Scientist Award 2011" by Nepal Academy of Science and Technology (NAST).
- The Takeda Techno-Entrepreneurship Award (2007) by The Takeda Foundation, Japan for techno-entrepreneurial achievement for world environmental well-being.
- Best Full Paper Award, the 3rd IWA Young Researcher Conference (YRC2006) for the paper entitled 'Development of land use export coefficients for the modeling of non-point source pollution loads in Fuji River basin, Japan'.
- AIT – DANIDA full scholarship (2002–2004) to pursue Master of Science in Integrated Water Resources Management in Asian Institute of Technology, Thailand.
- Tribhuvan University (Nepal) Merit Scholarship (1997–2000) to pursue Bachelor of Science in Agriculture in Institute of Agriculture and Animal Science, Nepal.
- Board Member, Asia Water Council (AWC)
- Member, World Association of Soil and Water Conservation (WAWSC)
- Member, American Geophysical Union (AGU)
- Member, International Association of Hydrological Sciences (IAHS)

- Member, International Water Association (IWA)
- Member, Japan Society of Civil Engineers (JSCE)
- Member, AIT Alumni Association (AITAA)
- Member, Environment and Public Health Organization (ENPHO)
- International Coordinator, Rotary Community Corps (RCC), Dhulikhel, Nepal.
- Coordinator, Indonesia Earthquake Victim Relief Fund, University of Yamanashi, Japan.
- Coordinator, University of Yamanashi, Japan – Environment, and Public Health Organization, Nepal Research Group.
- General Secretary, Asian Institute of Technology Nepalese Society, Thailand. (2002-2003)
- Advisor, Post Graduate Society, Institute of Agriculture and Animal Science, Nepal. (2001-2002)
- Vice-Chairmen, Hitkari Samiti, Institute of Agriculture and Animal Science, Nepal. (2000- 2001)
- Vice-Chairmen, Nepal Youth Red-Cross Society, IAAS, Nepal. (1999-2000)
- Editor, The Profile of Agricultural Graduates, 2001, IAAS, Nepal. (2001)
- Editor, The Springtide, IAAS, Nepal. (2000)
- Climate Change and Adaptation,
- Integrated Water Resources Management,
- Hydrology and Water Quality Modelling,
- Groundwater Development and Management,
- Sustainable Water Management Policy

ExpertiseDegreesCoursesCURRENT RESEARCH TOPICSPROFESSIONAL ACTIVITIESAWARDSSELECTED PUBLICATIONS

Managing Technology; Innovation & New Product Development within and across firms (i.e., strategic alliances); Green Innovation; Green (low-carbon) Technology Assessment; Employees Innovativeness.

- PhD in Management of Technology, EPFL Lausanne, Switzerland (2006);
- Master in Logistics and Supply Chain Management, EPFL Lausanne, Switzerland (2000);
- MSc in Project Management, University of Putra Malaysia (UPM), Kuala Lumpur, Malaysia (1998);
- B.Sc., Civil Engineering in Project Management, University of Garyounis, Benghazi, Libya (1993)

Managing Technology & Innovation; Corporate Technology Strategy in Renewable Energy; International Merger & Acquisition, JV, and Strategic Alliances; Qualitative Research Method (PhD course); Management Research Design & Methodology (PhD course)

- Green and sustainable innovation and their impact on firm's performance
- Leaders and employees' innovative work behaviour in organisations
- New product development process management within and across firms (i.e., strategic alliances)

Academic positions

- AIT, School of Management: Doctoral Program Director, July 2017 to present; Associate Professor, Jan. 2015 to Present; Assistant Professor, Oct. 08 to Dec. 14

- Tokyo Institute of Technology, Science of Institutional Management of Technology (SIMOT), Postdoctoral Researcher, Jan. 2007 – Oct. 2008
- The Swiss Federal Institute of Technology, College of Management of Technology – EPFL, Research Associate Lausanne, 2001 – 2006
- Visiting Scholar, New York University (NYU), Stern School of Business, NY, USA, 2005
- University of Putra Malaysia (UPM), Housing Research Centre, Research Assistant KL, 1996 – 1998
- Best paper award (Dec., 2017) in Strategic Marketing and Branding Track, Paper Title: Implementing green innovation: Strategy, operation, and cooperation, Australian and New Zealand Marketing Academy Conference (ANZMAC), Melbourne, Australia, December 4-6, 2017. (Co-authored with Jirakraisiri, J. & Frank, B.)
- Best paper award (Dec., 2016) in Entrepreneurship and Innovation Track, Paper Title: Consumer motivation to switch to disruptive technology products, Marketing in a Post-Disciplinary Era, Australian and New Zealand Marketing Academy Conference (ANZMAC), Christchurch, New Zealand, December 5-7, 2016. (Co-authored with Kamolsook, A. & Frank, B.).
- Best article award (Feb., 2014), the international conference on: Emerging Trends in Business and Economy: Mapping the Way Ahead, Jaipur, India, February 14-15, 201
- One of my articles (PMJ, 2003) has been recognised by IEEE USA Today's Engineer (December, 2003) as one of the top ten 2003 engineering "works of value." <http://www.todaysengineer.org/2003/Dec/worldbytes.asp>

- Post-doc. 2001-2002: AIT & Institute of Aquaculture, University of Stirling, Scotland, UK
- Doctoral degree (Aquaculture): Dec. 1999, Asian Institute of Technology (AIT), Thailand
- Master's degree (Aquaculture): Aug 1994, AIT, Thailand
- Bachelor of Science (Animal Science): 1992, Institute of Agriculture and Animal Science (IAAS), Tri-Bhuvan University, Nepal
- Seafood and Nutrition Security
- Aquaculture nutrition, feed formulations, manufacturing and feeding management
- Small-scale / rural aquaculture and SDGs
- Commercial aquaculture techniques – breeding, nursing and grow-out of tilapia, carps, catfish, Pangasius, prawn/shrimp, seabass, ornamental fishes, rainbow trout, seaweeds, oysters, mussels, clams, cockles etc.
- Aquaculture development planning and fisheries management
- Integrated farming with vegetables and livestock and rice
- Gender in Fisheries/aquaculture
- Socio-Economics analysis
- Team Leader/Coordinator,Oct 2017-2021: Sustainable Seafood Security (SSN) Program, Funded by Erasmus+ Program of the European Union (EU). Partner countries: Indonesia (Bogor, Gadjahmada & Jakarta Fisheries Uni), Thailand (Maejo and Khonkaen Univ), Vietnam (RIA1, Can Tho & Nong Lam Univ.) Greece (EuroTraining & Univ. of Thessaly), Norway (NTNU), and UK (Univ of Stirling).
- Coordinator/PI at AIT (Jan 2013-2016):Development Rural Aquaculture through Entrepreneurship in Women in Myanmar (eWomen) funded by the Foreign Ministry of Italy, Rome, Italy via University of Tuscia, Italy.
- Deputy Chief of Party / Project Coordinator (Jul 2013 –2017): Agricultural Learning Exchange for Regional Networking (AgLEARN), funded by USAID (Budget, approx. US\$1 million), program countries: Bangladesh, Cambodia and Nepal.
- Affiliated Faculty(2005-2014): Taught at Post-graduate students on Statistics for Aquaculture, Inland Aquaculture (Aquaculture program) and Research Design (Rural & Regional Development Program).
- Visiting Faculty, Can Tho University, Vietnam(2010 – 2014): Teach Graduate students – Statistics and Experimental Design'
- Senior Research Scientist:(2004 Oct – July 2014): Research on tilapia fry production and grow-out farming at AARM/AIT and technology transfer to private and public sector.
- Visiting Scholar(May 2012): Univ of Montpellier III, France: Egide Project, Franco-Thai Cooperation.
- Coordinator for Asia(Jan 2008 – Present) – Sustainable Aquaculture Research Network for Sub-Saharan Africa (SARNISSA) funded by EU.
- Team Leader(2007-2010):Women in Aquaculture funded by Aquaculture without Frontiers funded by AwF-UK. Programs – Gorkha, Lamjung and Nawalparasi, Nepal.
- Project ManagerAquaculture Curriculum Development in Asia (200 5 – 2008) and Aqua-Internship (2007-2010) projects funded by EU under Asia Link Program.
- Visiting Fellow(2000 & 2001): Institute of Aquaculture (IoA), Univ. of Stirling (UoS), UK: Visiting Fellow working on "Role of lipids on tilapia seed production" and "Fish Seed quality project in Asia" funded by DFID.
- Research Scientist(2000 Jan –2003 Dec): Exotic Species in Aquaculture in SE Asia (Cambodia, Thailand, Laos and Vietnam): Problems and Prospects- funded by SIDA. Publication for "Seed quality project in Asia" funded by DFID, UK. Other publication related to brood stock management, nutrition and fry production.
- Project Coordinator(2000–2004): "Women in Aquaculture in Nepal" funded by German NGO, WDP German Committee.

Research Associate and PhD Scholar(1994-1999): AARM, SERD, AIT, Thailand. Regular monitor quality of tilapia fry produced by private sector, design and conduct research trials based on the need of the commercial farms, data analysis, paper writing and publication, technology transfer to the private sector.

-
- Aquaculture Training and Study Visit to Thailand during 9-13 December 2024 for 11 Government officers, other public and private sector professionals from Papua New Guinea. Approx. 20,000 USD.
- Freshwater Aquaculture Technical Services” subcontracted to AIT under the “ADB Grant No. JFPR 9226-CAM: Community-Based Tourism COVID-19 Recovery Project CSAF-CS10. Budget 66,000 USD. July 2024-June 2026.
- Reducing effects of Mycotoxins (REMS): testing of commercial product in shrimp funded by BIONTE SL, Spain. Budget approx. 19,380 Euros.
- Tilapia promotion and training (TPT) in India: Oct 2022 – Sept 2026: Organize tilapia training for groups of farmers and professionals in India sponsored by MM Group of companies. Budget: 48,000 USD.
- Aquaculture Internship & Training (AI&T) – Five students are trained for 3 months with different aquaculture activities. May 1 – Dec 31, 2022. Budget: 0.835 million Baht.
- Growing Seafood in the Lab (GSIL) project has been initiated in collaboration with ShioK Meats Pvt, Ltd., Singapore – Budget 11.95 million Baht Period: Dec 1, 2021 – Nov 30, 2026.
- Mariculture techniques – March 1 – Dec 31, 2022. Training of 10 government officials from the Department of Fisheries, Government of Tanzania. Budget: 1.17 million Baht.
- Testing of commercial feed additives of Lucta in Tilapia (TAFL) – testing products against aflatoxins in tilapia feed sponsored by a private company, Lucta company headquartered in Spain and branch in China: 1 Jun 2021 – 31 May 2022 (1.35 mil Baht).
- Aqua-Agri Workshop/conference in New Normal (AAWIN) – initiated with the estimated Budget of about 8 million Baht. Sep 2020 – Dec. 2022.
- BRAC Fish –technology transfer to BRAC Fisheries, Bangladesh, Aug 2020-July 2023. Budget 0.8 million Baht.
- Aqua-Dev, Nepal- upgrading aquaculture farm through technology transfer to Vaidya group, budget 1.7 million Baht – Aug 2020-July 2023.
- Aqua-Internship provide 3-months training to 10 students of College of Fisheries, Odisha University of Agriculture and Technology (OUAT), Odisha, India. Budget approx. US\$56,000.
- SOS – Sun-Oxygen-System: Energy efficient fishpond aeration enhancing integrated small-scale farming in Cambodia, ZHAW, Switzerland and Smiling Gecko Cambodia (SGC). 2020-2022. Budget CHF45,500.
- TALAT, Pakistan: Tilapia hatchery project in Karachi, Pakistan with LAARH, 2019-2022. L Budget 1.2 million Baht.
- ATF – Aflatoxins in tilapia feed – testing products of Patent company (Serbia) as solution 15 Dec 2020 – 31 Dec 2021 (0.7 mil Baht).
- Curriculum Development for “Sustainable Seafood and Nutrition Security (SSNSseafood-security.org)”, Indonesia, Thailand and Vietnam in collaboration with European partners in Greece, Norway and UK. Oct 2017- Dec 2021: 36+12 months: 999,556 Euro.
- Ex-Mad: Exchanges, Training and Study tour for Madagascar group. Dec 2019-Jun 2020.
- Testing Feed pellet stability funded by Anpario Co., UK. Budget GBP10,170.
- Testing of commercial products (feed additives) in tilapia diet to replace fishmeal funded by Biomin Holding, GbmH, Austria. Budget 41,248 Euro (Jan 2018-Dec. 2019).
- Testing of commercial phytogetic products in tilapia funded by Delacon Company based in Austria. Budget 13,179 Euro (Jan 2018-Dec. 2019).
- Aquaculture Training, Workshop & Tours (AquaTT), Budget 3.954 million Baht. (Nov 2017-Nov. 2018).
- Tilapia Training and Workshop, Budget 3.1654 million Baht (Dec 2016-Nov 2017).
- Aqua-Tech., Aquaculture and agriculture related training and study tours (2014 – 2016): Budget approx. US\$100,000.
- Fish farming for income generation in Preah Vihear, Cambodia funded by JCI, Japan, 2017.
- Testing of Feed Supplements: A series of research on feed supplement products with Biomin Holding Company headquartered in Vienna, Austria (2016 Jan – Nov 2017).
- Aqua-Dev: Aquaculture and agriculture related training and study tours (2014 – 2016) – Budget approx. US\$150,000.
- Myanmar-Dev. (2013-2014), Rakhine Myanmar funded by OXFAM, UK, Budget US\$100,000.
- Development of Rural Aquaculture through Entrepreneurship in Women in Myanmar (eWomen), Foreign Affairs Ministry, Govt. of Italy, 2013, Budget –EUR332,000.
- Sustainable Aquaculture Research Network for Sub-Saharan Africa (AIT component) – funded by EU under FP7 program 2008-2011 (Budget Euro 996,036, 2 European and 5 Asian partners in Bangladesh, Cambodia, Nepal, Thailand and Vietnam).
- Linking the post-graduate education in aquaculture and aquatic resources management with its industries through internship program. (Euro 959,157, Sept 2007 – Aug 2010).
- Empowering women through aquaculture and vegetable gardening in rural areas funded by Aquaculture without Frontiers (AwF), Jan 2007 – Dec 2009 (US\$9,259).

- Asia Link Project (Euro 386,957). Title: "Improving Master's Degree level education in Aquaculture and Aquatic Resources Management in Cambodia, Nepal and Vietnam" – Partners – University of Stirling (UK), Univ. of Aveiro (Portugal), Royal Univ. Of Agriculture (Cambodia), IAAS (Nepal), Uni. Of Forestry and Fisheries (Ho Chi Minh, Vietnam), Research Aquaculture No. 1 (Hanoi, Vietnam).
- Women in Aquaculture in Nepal project funded by Canadian Cooperation Office (2006 –2008 (Phase III: ~CAD35,000).
- Women in Aquaculture in Nepal project funded by WDP-German Committee (2000 –2002 (Phase I: 25,000 US\$) and 2002 – 2004 (Phase II: 28,000 US\$).
- Post-Doc. Research/Publication (2002) from DFID, UK (~£10,000).
- Exotic fish species in SE Asia – Problems and Prospects", funded by SIDA, 2000-2001 (~30,000 US\$).
- Support from AgriBrands/Cargill Inc. and Nam Sai Farm Co. Ltd., for Post-doc research on effects on lipids on fish eggs and fry (Approx. US\$30,000).
- Support from Narai Technologies and Nam Sai Farm Co. Ltd., for doctoral and Post-doctoral research (approx. 100,000 US\$). 1994-1999.

Dr.Salvatore G.P. Virdis

PositionAssociate ProfessorUnitRemote Sensing and Geographic Information SystemsFaculty of TechnologyContact Info ([662\)524 6196](tel:6625246196) 524 6196)
virdis@ait.asia Media Links [Personal website](#) PROFILEEDUCATION BACKGROUNDRESEARCH INTERESTSTEACHINGSELECTED PUBLICATIONSONGOING AND COMPLETED PROJECTSRESEARCH KEYWORDS

Dr. Salvatore G.P. Virdis is an Associate Professor at the Asian Institute of Technology (AIT) in Thailand, boasting a solid career spanning over two decades in environmental Geo-Information and Earth Observation Science. Dr. Virdis has made substantial academic contributions, authoring more than 40 peer-reviewed publications and delivering numerous presentations at international conferences and various scientific and professional forums. His research expertly combines advanced remote sensing techniques, geospatial modeling, and climate science to tackle critical environmental and societal challenges across diverse global regions on a variety of spatial and temporal scales.

- Ph.D. in Science and Technologies Applied to the Environment, University of Siena, Italy, 2006.Thesis:Land subsidence monitoring in relation to industrial exploitation of groundwater in coastal plains, utilizing SAR interferometry, GPS, and high precision leveling measurements.
- Master DESS in Remote Sensing: Methods, Applications, and Environment, Université Pierre et Marie Curie (UPMC), Paris VI, France, 2004.
- M.Sc. in Geological Science (Specialization in Applied Geology), Five-Year Degree, obtained cum laude at the University of Siena, Italy, 2002.

My recent and current research focuses on applying Geo-Information, Earth Observation Science and Environmental Modelling to assess and evaluate climate and anthropogenic changes, as well as their impacts on natural and human environments across historical, current, and future time scales. Moreover, I am also keen on exploring the dynamics of physical landscapes while considering the social and human dimensions of geographical issues. My research agenda can be encapsulated in the following research questions:1. To what extent are the individual and combined effects of land use/cover changes and climate change exacerbating the impacts on both the natural and built environments?2. How are emerging data-driven methods enhancing the understanding of environmental changes, particularly in regions with limited data availability, such as Southeast Asia?For my research, I integrate a range of field-based Earth Observation techniques with advanced geospatial and environmental modeling approaches.

Ongoing

- "Assessment of Environmental Inequalities of Air Pollution of Vulnerable Socioeconomic Groups in the World of Work in Bangkok City, Thailand" funded by Stockholm Environment Institute (SEI). Budget: 400,000 SEK. Period: 2021-2022. Role: Co-PI.
- "Application of Big Earth Data in Support of the Sustainable Development Goals in Thailand", funded by the National Research Council of Thailand (NRCT). Budget 10,758,131 THB, Period: 2021-2023. Role: Co-PI.
- "Climate Change Risk Assessment for Southeast Asian Lakes (CCRASEAL)" funded by Asia-Pacific Network for Gobar Change research (APN). Budget: 87,000 USD. Period 2020-2022, Role PI.
- "Assessment of Groundwater Sustainability in the Special Economic Zone of Thailand for Operational Groundwater Management" funded by Stockholm Environment Institute (SEI). Budget: 52,300 USD. Period 2020-2022. Role Co-PI.
- "Integrated Assessment of SDGs Using Big Earth Observation Data for Bangkok Metropolitan Region (BMR)" funded by the National Research Council of Thailand (NRCT). Budget 2,195,000 THB. Period: 2020-2022. Role: Co-PI.

Completed

- "Water harvesting and Agricultural techniques in Dry lands: an Integrated and Sustainable model in MAGhreb Regions WADIS-MAR" (ENPI/2011/280-008) large scale EU funded project. Budget 3.5 Million Euros. Period: 2012-2014. Role Co-PI.
- "Integrated Multidisciplinary Approach to flood Risk Analysis IMARA". EU funded project. Period: 2010. Role: Co-PI.
- "Multitemporal approach for an integrated study of Sardinia Region coastal zone changes AMSICORA". Funded by Regione Autonoma della Sardegna. Budget: 75,000 Euro. Period: 2009-2011. Role: PI.
- "Geomatics for the management of mineral resource" Capacity building project funded by Italian Ministry of Education, University and Research. Budget: 13,800 Euro. Period: 2009-2010. Role: Co-PI
- L'Aquila town earthquake ground displacements measurements by means of field survey, GPS data collection and post-processing, DInSAR analysis. Post-earthquake disaster and civil protection-oriented project funded with core-funds from the University of Siena. Period: 2009. Role: Co-PI.

- Geo-Information and Earth Observation Science;
- Climate change and land use / land cover impact assessment;
- Geospatial data-driven methods and environmental monitoring and assessment;
- Satellite radar interferometry (InSAR).

Dr. Sarawut Ninsawatreceived the Doctoral degree at Osaka City University (OCU), Japan. He was a Postdoctoral researcher at National Institute of Advanced Industrial Science and Technology (AIST), Tsukuba, Japan. Currently, he is Associate Professor in Remote Sensing program, Department of ICT, School of Engineering and technology, Asian Institute of Technology.

- Doctoral of Creative Cities in Urban Information, Osaka City University, Japan, (2009)
- M. Sc. in Space Technology Applications and Research), Asian Institute of Technology, Thailand, (2002)
- B. Sc. in Environment Science, Silpakorn University, Thailand, (2000)

His research interests are the application of machine learning using Remote Sensing and GIS for agriculture and natural resource management. Additionally, he is also expert in the development Web Mapping Application and framework especially focus on the implementation of standard OGC Web services (OWS) framework and the various Location-Based Service applications were developed to utilize the location information for logistic purpose.

Dr. Sein Minn is an Assistant Professor in the Data Science and Artificial Intelligence and Computer Science programs within the Department of Information and Communications Technologies (ICT). He earned his Ph.D. in Computer Engineering from the Université de Montréal, where he advanced student knowledge tracing and Q-matrix refinement through AI and machine learning techniques. Prior to his current role, he held research positions at INRIA, École Polytechnique, CNRS, and the Université du Québec à Montréal, leading projects on interpretable AI for education. Dr. Minn has published in leading venues such as AAAI, AIED, and ICDM, and serves as a reviewer and review editor for major journals including IEEE Transactions on Education and Frontiers in AI. His work, supported by grants from NSERC, Inria, and international partners, reflects his commitment to advancing trustworthy, adaptive AI for learning and beyond.

- Ph.D. in Computer Engineering (AI in Education), Université de Montréal, Canada 2020

- M.Eng. in Software Engineering, Huaqiao University, P.R.China 2015
- B.C.Sc. in Computer Science, University of Computer Studies Yangon, Myanmar 2010
- His research focuses on human-centered and interpretable AI, bridging machine learning, user modeling, and cognitive modeling to develop adaptive, transparent systems that align trust and effectiveness in real-world applications.

Dr.Simon Guerrero Cruz

PositionAssociate ProfessorUnitEnvironmental Engineering and ManagementFaculty of InfrastructureContact Info [66-2-524 5644](tel:66-2-524 5644) simongc@ait.ac.th Download full CV Media Links PROFILEEDUCATIONAL BACKGROUNDRESEARCH INTERESTSTEACHINGSELECTED PUBLICATIONSON GOING AND COMPLETED PROJECTSAWARDS AND HONORSPROFESSIONAL AFFILIATIONSRESEARCH KEYWORDS

Dr. Simon is an environmental scientist & Microbiologist, with 10 years of experience specializing in the microbiology of greenhouse gases (GHGs) for Climate Change mitigation and management adaptation in human-mismanaged ecosystems.

His main interests are, but not limited to:

- The microbial eco-physiology of GHG emissions, in particular from the Carbon and Nitrogen cycles in wastewater treatment and in water-intensive rice agriculture.
- He strives to spread awareness on microbial drivers GHG mitigation and the adaptation in management and restoration of geochemical cycles, accounting for microbial drivers which ultimately rule GHG emissions and are the key to Climate Change mitigation.
- The development of international networks and strategies oriented to exploit the benefits of Microbiology for Climate Change Mitigation.

During his career, Dr. Simon has collectively secured € 2.34 million through various international funding schemes encompassing:

- Internationally competitive postgraduate scholarships, from diverse Mexican ministries and councils.
- Globally prestigious individual postdoctoral fellowships from the HORIZON Marie Curie actions.
- Globally intercontinental funding schemes in consortia such as EU – SE Asia Joint Funding Scheme, and the European Commission HORIZON Marie Curie Staff Exchange.

Multi country and multidisciplinary collaborations are the vehicle of his international impact, as he currently collaborates with scientists from diverse disciplines from 9 countries in 3 continents on aspects related to GHG mitigation, Climate Change adaptation in Agriculture through microbiology, microbial resource recovery, geochemical cycles primarily in wastewater and flooded paddy fields.

- PhD. in Environmental Microbiology, Radboud University Nijmegen, The Netherlands (2018).
- MEng. in Environmental Technology and Engineering (IMETE), an Erasmus Mundus Master program between: Universiteit Gent, Belgium & Vysoká škola chemicko-technologická v Praze, Prague, Czech Republic, (2013).
- MSc. Environmental Sciences, UNESCO-IHE, Institute for Water Education, Delft, The Netherlands (2013).
- BSc. Biology, Chemistry and Pharmaceutical Technology, Universidad de Guadalajara, México (2010).
- VET Pharmaceutical Chemistry and & Technology, Centro Enseñanza Técnica Industrial (CETI), México (2004).

Mitigation of greenhouse gases (GHGs) in anthropogenic ecosystems such as:

- rice agriculture.
- wastewater treatment.
- urban & agricultural canals and ponds.

Microbiology of GHG emissions and mitigation for the development of microbial-inspired technologies to enable:

- Climate-smart and GHG-mitigating agricultural biotechnologies.
- Microbial biotechnologies for resource recovery, enabling circular economy societies.

Microbial diversity and function in crucial world challenges to ensure planetary health, focus on:

- Microbiology and the relationship with microplastics in Mangroves.
- Microbial degradation of emerging pollutants, e.g., microplastics.
- Climate Change induced by microbial response to human management in anthropogenic ecosystems.

Bridging the science of microbiology of GHG to environmental management and policy through:

- Constant engagement with NGOs in North America.

Creating research networks with private initiatives.

ED78.01: Environmental Chemistry and Laboratory (Mandatory Required general course)

ED78.19: Environmental Impact Assessment (Required elective for Environmental Technology and Management specialization)

ED78.9038: Fundamentals of Microbiology in Environmental Engineering (recommended prerequisite for the next subjects):

ED78.9039: Applied Microbiology and Laboratory (Elective)

ED78.9035: Microbiology of anthropogenic ecosystems and management (Elective)

ED78.9036: Microbiology of Climate Change Mitigation and Resource Recovery (Elective)

- MicroSOS: Plants Crying for Help.

Funding: European Commission under the HORIZON Marie Curie Staff Exchange actions.

Duration: January 2024 to December 2027.

Role: Dr. Simon is the AIT representative as Associated Partner in a successful consortium with 5 European partners worth 1.6 million euros with a grant allocated to AIT of up to 257 thousand euros with a maximum of 56 month for staff academic exchanges to Europe.

- MicroGR2ICE: Microbial GHG reduction in RICE.

Funding: European Commission and the Southeast Asia Joint Funding Scheme (JFS).

Duration: April 2023 to March 2026.

Role: leader of a consortium partners in The Netherlands and Germany. 2021. With a total allocated grant worth 360 thousand euros.

Awards and Grant honors:

- Awarded with a HORIZON2020 Marie Skłodowska Curie Individual Fellowship: Career Restart in 2020, for the top 2% of Postdoctoral researchers in Europe. Fellowship value 259,000 euros for the destination country: Spain, Catalan Institute of Water Research.
- Awarded the "Seal of Excellence" by the European Commission HORIZON2020 program Marie Skłodowska Curie Actions (2018) for my Postdoctoral outstanding proposal "MICROWATER", placing in the top 5% of young researchers in a globally competitive scheme from approximately 10 thousand applications worldwide.

- Awarded an international scholarship for Doctoral Education Programme worth 48 thousand euros by the National Council of Science and Technology of Mexico (CONACyT). An award given to the top 1% of undergraduate students in Mexico from approximately 20 thousand applications to all fields and all destinations. 2017 with destination country: The Netherlands.
- Awarded with a supplementary scholarship by the Ministry of Education, Mexico, for postgraduate education support in 2012.
- Awarded an international scholarship for International postgraduate education worth 40 thousand euros by the National Council of Science and Technology of Mexico (CONACyT). An award given to the top 1% of undergraduate students in Mexico from approximately 20 thousand applications to all fields and all destinations. 2011 with the destination countries: The Netherlands, Czech Republic and Belgium.

Honors as an International Scientist:

- Invited Expert to the International Expert Panel for Research funding scheme from the Slovak Research and Development Agency (SRDA). Field: Agriculture, Q3-Q4 2024, Slovakia.
- Invited Expert Reviewer for the First Order Draft (FOD) of the Global Nitrous Oxide Assessment report. Invited by: The Climate and Clean Air Coalition (CCAC) Secretariat & United Nations Environment Programme. July 2024, UNITED NATIONS ENVIRONMENTAL PROGRAMME.
- Invited juror for the European Commission HORIZON-CL5-2021-D3-02-02 program RES4CITY, serving as an evaluator for project incubation grants in the framework of the "RES4CITY STARTUP EUROPE ACCELERATHON initiative" for technological solutions to transform cities into circular economy networks. July 2024. European Commission.
- Invited reviewer for the "Initiation grants on Atmospheric Methane Removal" by the NGO Spark Climate Solutions. April 2024, United States of America.
- Invited panelist in a closed session on Methane Mitigation in the framework of the International Rice Congress 2023. Host: The Global Methane Hub, October 28th2023, Pasig City, The Philippines.
- Invited Scientist to a closed per-invitation global convening on "Atmospheric Methane Destruction". Hosted by the NGO Spark Climate Solutions and Stanford University, April 10-14th, San Francisco, United States of America.
- Invited delegate on the AIT Hub Vietnam project for academic expansion. Host: Van Lang University, June 31st2022, Ho Chi Minh City, Vietnam.

Honors as a speaker:

- Invited Key-note speaker at "the 4th International Symposium on Sustainable Agriculture for Sub-Tropical Regions (ISSASR-4) held between June 21stto June 25th2024 in Changsha, China.
- Invited speaker on "Micro-solutions for Macro-challenges: the role of microbiology in GHG mitigation", by the University of The Philippines campus Diliman, Institute of Environmental Sciences and Meteorology. October 20th2023, Quezon City, The Philippines.
- Invited panelist in a closed session on Short Lived Climate Pollutants, at UNITED NATIONS ESCAP within the framework of the Clean Air and Climate Conference 2023. Host: Clean Air Task Force (CATF), June 1st2013, Bangkok, Thailand.

Invited panelist in by-invitation closed session on Greening Education in Asia at UNITED NATIONS ESCAP. Host: UN ESCAP, May 17th2023, Bangkok Thailand.

- "Atmospheric Methane Destruction Network, lead by Spark Climate Solutions."
- "The Methane Emissions Technology Alliance (META)".

Climate Change Mitigation, Greenhouse Gases, GHG, Greenhouse Gas Mitigation, Rice Agriculture, Wastewater Treatment, Wetlands, Microbiology, Resource recovery, Methane Microbiology, Methane Mitigation, Methanotrophy.

- Functional Coating: This industrial-driven research focuses on hierarchical engineering of surface by mimicking surface feature found in nature, particularly the surface of lotus leaf. The properties of particular interest include self-cleaning, anti-dusting, anti-fouling, anti-reflection, as well as flame-retardant. The study covers both hierarchical structural design of the coating and chemical composition manipulation that give rise to the desired properties at an acceptable cost. The coatings are deposited by using the dip-coating and spray on methods which are simple, versatile, and can be modified for large-scaled coating for large panels such as solar cells.

- Nanostructured materials: The research covers the synthesis of nanomaterials such as WO₃-based nanowires, SnO₂ nanorod, TiO₂-based nanofibers, and electrospun TiO₂ fibers, and covers the application of the nanomaterials for anti-bacterial and depollution.
- Solar-reflective pigments: The NIR reflective pigments (cool pigments) are synthesized by solid-state reaction and be utilized in building envelopes for energy saving.

Ms.Stacey Huang

Position Adjunct Faculty Unit Faculty of Business Management Contact Info stacey.huang@changevoyage.com Expertise Position Certification Profile

Change Management, Agile thinking for Digital Transformation

Co-Founder, Change Voyage; Executive Director, PARIMA

HOGAN, MBTI I, MBTI II, FIROB, SWIFT, TRANSACTIONAL ANALYSIS, LEVEL A, LEVEL B, 16PF, PROSCI, MSP PRACTITIONER, CCMP

Stacey is the co-founder of Change Voyage, she has over 13 years of consulting experience predominantly in the field of business transformation and large-scale organizational programmes. Her past projects include enabling Fortune 500 companies with their business improvement transitions, moving to target operating models, changing culture, bringing in agile, new technologies and increasing employee engagement. In her consulting roles, she has worked across multiple industries, countries and cultures, having spent time in Kenya, London, Hong Kong and Singapore. She has worked with companies in both private and public sector where she has clients from Insurance, Finance, FMCG, Oil & Gas, Energy and Healthcare.

As the Executive Director of the Pan-Asia Risk and Insurance Management Association (PARIMA), she is responsible for managing PARIMA's growth agenda, strategies and programs. She has since established PARIMA as the fastest growing professional association for Risk managers. In addition to managing operations for the association made up of 3000+ corporate risk members and more than 1800 companies, she organizes APAC-wide conferences, educational platforms and dialogue targeted to strengthen the risk community. She regularly hosts and speaks with risk managers and insurers on topics that deal with organizational sustainability, resilience, change, disruption and overall risk management. As an organizational psychologist, she also regularly conducts psychometric assessments and coaching for leaders, teams and individuals understanding their strengths, development area, motivation, influence and working styles. She continues her passion for education and is also a regular course leader and lecturer

in the National University of Singapore. Stacey has a double degree in Business and Psychology from Singapore Management University and a Master's degree in Industrial and Organizational Psychology from University College London (UCL) where she graduated with distinction. She is currently residing in Hong Kong where she enjoys the hiking trails over the weekend. She is passionate about all things change, risk and psychology related. She believes that adults learn best by doing and her sessions are often designed to be highly practical and applied with a healthy balance of challenge and fun.

Dr. Sutat Weesakul is a distinguished figure in the field of hydraulic and coastal engineering, boasting over 35 years of valuable experience in both teaching and research. He holds a Doctor of Engineering (D.Eng.) degree in Hydraulic/Coastal Engineering from the Asian Institute of Technology, displaying his strong educational background. As an expert in his field, Dr. Weesakul has actively contributed to academia, serving as a session chair for conferences and holding teaching responsibilities for courses such as Coastal and Estuarine Processes. His research interests primarily focus on water-related topics, reflecting his commitment to advancing knowledge in hydraulic and coastal engineering.

Ongoing projects:

- Circular System Innovation for Polyurethane Foam: Catalytic approach to upcycle foam waste from mattresses and beyond Funded by: The Royal Academy of Engineering, UK & Circularity Co. Ltd, Thailand Project value: £100,000 (\$126,419); Period: 2021–2024 Role: Project Leader Collaborating partners: The University of Cambridge, UK & Circularity Co. Ltd., Thailand
- Development of a nanomagnetic flow system for the recovery of water from polyurethane acidolysis Funded by: The National Science and Technology Development Agency (NSTDA), Thailand Project value: £80,000 (\$101,114), Period: 2021–2024 Role: Project Leader Collaborating partners: The University of Cambridge, UK & Circularity Co. Ltd., Thailand
- Self-Healing and Electrically Conducting Photopolymer for Tactile Sensors Funded by: The National Science and Technology Development Agency (NSTDA), Thailand Project value: THB 487,100 (\$13,668); Period: 2021–2025 Role: Project Leader Collaborating partner: National Metal and Materials Technology Center, Thailand
- Superhydrophobic Self-Cleaning Coatings with Improved Electrical Properties for Porcelain Insulators Funded by: The National Science and Technology Development Agency (NSTDA), Thailand Project value: THB 487,100 (\$13,668); Period: 2020 – 2024 Role: Project Leader Collaborating partner: National Metal and Materials Technology Center, Thailand
- SERS-based Biosensors for the Detection of Cortisol Biomarker in Sweat Funded by: The National Science and Technology Development Agency (NSTDA), Thailand Project value: THB 487,100 (\$13,668); Period: 2020 – 2024 Role: Project Leader Collaborating partner: National

Completed projects:

- Anti-reflective Coatings for Solar PanelsFunded by: NEON Infotech South East Asia Co. LTD., ThailandProject value: 290,000 THB (\$8,138); Period: 2021 – 2022Role: Project Leader
- Solar Panel Coating DeviceFunded by: NEON Infotech South East Asia Co. LTD., ThailandProject value: THB 546,000 (\$15,321) ; Period: 2022 (7 months)Role: Co-PI
- Design and Fabrication of Aptamer-Based SERS Chips for Selective Detection of Paraquat Herbicide Residues in Water and SoilFunded by: The National Science and Technology Development Agency(NSTDA), ThailandProject value: THB 290,000 (\$8,138) ; Period: 2020 – 2022Role: Project LeaderCollaborating partner: National Electronics and Computer Technology Center,Thailand
- Sol-Gel Synthesis of Core-Shell Metal Oxide Nanoparticles and their Application in NIR Reflective CoatingsFunded by: The National Science and Technology Development Agency(NSTDA), ThailandProject value: THB 290,000 (\$8,138) ; Period: 2020 – 2022Role: Project LeaderCollaborating partner: National Metal and Materials Technology Center,Thailand
- Evaluation of Metal Oxide Nanostructured Anti-Reflection Coatings for Reduced Optical Losses in Solar PanelsFunded by: NEON Infotech South East Asia Co. LTD., ThailandProject value: THB 1,150,000 (\$32,269) ; Period: 2019 – 2020Role: Project Leader
- Low-Cost 3D Printed Microfluidic Sensing Devices for Rapid Chemical DetectionFunded by: AIT Research Initiation GrantProject amount: THB 50,000 (\$1,403) ; Period: 2019 – 2020Role: Project Leader
- Development of Robust Coating for Fastener IndustryFunded by: IDEAL Fastener Asia Ltd. Hong KongProject value: THB 11,759,020 (\$329,957) ; Period: 2016 – 2020Role: Project Coordinator
- Simulation and Nanotechnology to Enhance Selected Solar Cell MaterialsFunded by: NEON Infotech South East Asia Co. LTD., ThailandProject value: THB 1,500,000 (\$42,090) ; Period: 2018 – 2019Role: Co-PI
- Inter-Comparison of Nanoparticle Size MeasurementFunded by: Asia Nano Forum (Coordinated by NANOTEC, Thailand)Period: 2018 (9 months)Role: Project Participant (Total 17 participants from 7 countries)
- Portable Raman Spectrometer to Differentiate Infected from Ischemic Bone in Sickle Cell PatientsFunded by: The Research Council, OmanPeriod: 2015 – 2016Role: Project Key Personnel
- Transforming Systems through Partnership 20/21 Research Grant awarded by the Royal Academy of Engineering, UK. Award value: GBP 80,000.
- Master thesis supervised selected for the ADB-JSP Thesis of the Year Award 2022 under the special category of “Research and Development for Technological Innovation”. Thesis title: “Design and Fabrication of Multi-walled carbon nanotube-Polydimethylsiloxane (MWCNT-PDMS) Composite Polymer-Based Flow Sensor for Low Fluid Flow Detection”
- The National Research Award (2018), awarded by The Research Council, Oman.
- AIT Distinguished Teaching Award (2018), awarded by the Asian Institute of Technology, Thailand
- Sheikh Saqr Al Qasimi Graduate Research Fellowship during PhD (2010 – 2012)
- Best AIT Master Thesis Award in 2009
- Infineon Prize for Outstanding Academic Performance in Microelectronics in 2009
- AIT Fellowship during Master of Engineering (2007 – 2009)
- Merit Scholarship by North East Council of Education, India during B. Tech. (2002 – 2006)
- Assam High School Scholarship up to Class X (1993 – 1998)
- Nominated Member of Sigma Xi: The Scientific Research Honor Society
- Member of the International Water Association
- Member of Nanotechnology Association Thailand
- Member in IEEE Nanotechnology Council
- Member in IEEE Electron Devices Society
- Member in IEEE Photonics Society

Dr.Teerapat Sanguankotchakorn

Dr. Teerapat Sa-nguankotchakorn is currently an Associate Professor at the Asian Institute of Technology (AIT), School of Engineering and Technology. He was invited as a visiting professor at National Institute of Information and Communications Technology (NICT) in year 2008 and 2012. He was also invited as a visiting researcher at NHK Science and Technology Research Lab in year 2008 and 2009. He has graduated 142 master+4 doctoral graduates from 12 countries under his supervision.

His main research is in the area of Quality of Service in networks, Wireless Access Networks, High Speed Communication Protocol design, etc.

He also received Certificate of Completion of Director Certification Program (class 148/2011) and Advanced Audit Committee Program (class 14/2014) from Thai Institute of Directors (IOD). Currently, he holds many significant positions in various government organizations as well as listed company in stock exchange of Thailand namely, Board of Directors (Banpu Public Company Limited), Board of Governors (Thai Public Broadcasting Service; ThaiPBS) and Chairman of Audit Committee (ThaiPBS).

In addition to Thai language, he is also fluent in English and Japanese.

- D.Eng in Information Processing, Tokyo Institute of Technology, Japan, (1993)
- M.Eng in Information Processing, Tokyo Institute of Technology, Japan, (1990)
- Certificate in Japanese Language, Osaka University of Foreign Study, Japan (1987)
- B.Eng. in Electrical Engineering, Chulalongkorn University, Thailand, (1987)

My research interests are in the area of Quality of Service in Networks, Wireless Access Networks, High Speed Network Protocol Design, Mobile Ad Hoc Networks, Digital Terrestrial Television Broadcasting Technology, and Mobile Network Technology

Prof. Thanakorn Pheeraphan

Position Adjunct Faculty
Unit Structural Engineering (STE) / Civil and Infrastructure Engineering (CIE) Program
Faculty of Infrastructure
Contact Info thanakorn@ait.ac.th
PROFILE EDUCATIONAL BACKGROUND RESEARCH INTERESTS TEACHING SELECTED PUBLICATIONS ONGOING AND COMPLETED PROJECTS AWARDS AND HONORS PROFESSIONAL AFFILIATIONS RESEARCH KEYWORDS

Group Captain Prof. Thanakorn Pheeraphan is an adjunct faculty at Department of Civil and Infrastructure Engineering at the Asian Institute of Technology since 1999 where he has taught and continued working on research in the area of mortar and concrete technology with graduate students. He is also a deputy director of graduate school and Professor of Civil Engineering at Navaminda Kasatriyadhiraj Royal Air Force Academy (NKRAFA).

- Ph.D. in Department of Civil and Environmental engineering, Massachusetts Institute of Technology (MIT), USA, 1997
- Master of Science in Civil Engineering in Department of Civil and Environmental engineering, Massachusetts Institute of Technology (MIT), USA, 1993
- Bachelor of Science (Distinguished) in Civil Engineering, Virginia Military Institute (VMI), USA, 1991
- Director Certification Program, DCP 201/2015, Thai Institute of Directors (IOD), 2015
- Corporate Governance for Directors and Senior Executives of Regulator, State Enterprises and Public Organizations (PDI Class 18), 2018

His research focuses on preplaced concrete aggregate, design and inspection of airfield pavement, development of repairing material and special concrete, development of special mortar products for commercial application, and design and testing of protective structures for military applications. Recently, his interest has been in the area of supporting the pathway of Net Zero Cement and Concrete Roadmap for Thailand.

Dr. Wenchao Xue is an Associate Professor at the Faculty of Infrastructure. She lectures in Environmental Engineering and Management Program. Dr. Xue is meanwhile serving as the Founding Director of AIT Belt and Road Research Center since 2019.

PROFILE EDUCATIONAL BACKGROUND RESEARCH INTERESTS TEACHING SELECTED PUBLICATIONS ONGOING AND COMPLETED PROJECTS AWARDS AND HONORS PROFESSIONAL AFFILIATIONS RESEARCH KEYWORDS

Dr. Wenchao Xue is an Environmental Scientist and Engineer with a doctorate in urban engineering and over ten years of experience in water pollution control, water and wastewater treatment technologies, emerging contaminants and microplastic pollution control in aquatic environments, and sustainable watershed management. Dr. Xue is meanwhile the Founding Director of the AIT Belt and Road Research Center (BRRC). She has extensive experience in leading regional and international cooperation and projects to support sustainable development in the Belt and Road region. As Principal Investigator (PI) and Co-Principal Investigator (CO-PI), Dr. Xue has secured over 25 million THB in project funding, collaborating on national and international projects with both public and private sector involvement. Dr. Xue's commitment to research and knowledge dissemination is reflected in an H-index of 17, with 44 peer-reviewed publications indexed on SCOPUS.

Prof. Worsak Kanok Nukulchai

Position Emeritus Professor Unit
Structural Engineering Department of Civil and Infrastructure (CIE)
Contact Info worsak@ait.ac.th Media Links
PROFILE EDUCATIONAL BACKGROUND RESEARCH INTERESTS SELECTED PUBLICATIONS ONGOING AND COMPLETED PROJECTS AWARDS AND HONORS PROFESSIONAL AFFILIATIONS RESEARCH KEYWORDS

Prof. Worsak Kanok-Nukulchai is a distinguished figure in the field of Structural Engineering and Construction. He earned his B. Eng. from Chulalongkorn University in 1971, followed by an M. Eng. from the Asian Institute of Technology in 1973. His academic journey culminated in a Ph.D. in Structural Engineering and Structural Mechanics as a Fulbright Scholar. Prof. Worsak has an extensive teaching career since 1980, and he attained

his Professorship of Structural Engineering and Construction in 1989. He was part of the pioneer team involved in the early-stage development of Finite Element Methods in 1974. In addition to his academic contributions, he assumed the role of Interim AIT President, officially appointed by the AIT Board of Trustees in 2013, and later as AIT President from 2014–2018. Today Professor Worsak is a member of the Executive Committee of AIT.

- Ph.D., Structural Engineering and Structural Mechanics, University of California, Berkeley, California, USA, 1978
- M.Eng., Structural Engineering, Asian Institute of Technology, Thailand, 1973
- B.Eng., Civil Engineering, Chulalongkorn University, Bangkok, Thailand, 1971 (Hons)
- Computational Mechanics
- Finite Element Method
- Structural Engineering
- Civil Engineering

Prof Worsak has extensive research experiences in Structural Engineering, Matrix Method of Structural Analysis, Finite Element Methods, and Computational Mechanics. His publication record includes 50 refereed journal articles, 2 books, 2 book chapters, 117 conference papers, 14 papers in conference proceedings.

- 2008 Investigation and Renovation of Wat Borvornnives Chedi in Bangkok, for Department of Fine Arts, Royal Thai Government; Chief Design Engineer.
- 2002 Development of Rubberized Asphalt from Used Rubber Tire Scrap for Infrastructure Construction, sponsored by the National Metal and Material Technology Center (MTEC), National Science and Technology Development Agency, Thailand, Team Leader.
- 2002 Adjustments of Building Energy Codes in Thailand, a study for Department of Energy Development and Promotion under the sponsorship of Danish Agency for Environment and Development (DANCED), Team Leader.
- 1993 7 highway interchanges of the New Bangkok Choburi Motorway (Bang Prakong, Bang Pra, Bangkok, Romklao, Lad Krabang, Pantong and Choburi), for Thai Engineering Consultants, Co., Ltd.; Structural Consultant.
- 1993 8 highway interchanges of Outer Ring Road Highway (Lam Lukka, Sukhabhival, Klong Klum, Thanyaburi, Ram Indra, On-Nuj, Tap Chang, and Wat Salud), for Thai Engineering Consultants, Co., Ltd.; Structural Consultant.
- 1991 Don Muang Tollway Project, in association with DYWIDAG (Thailand) and Thai Engineering Consultants, Co., Ltd.; Chief Structural Engineer (Local Counterpart).
- Mar 16, 2022– Inducted into the Hall of Fame of Chulalongkorn University's Faculty of Engineering as Senior Distinguished Alumnus..
- May 01, 2021– Bestowed the Royal Decoration of the Member (Fifth Class) of the Most Noble Order of the Crown of Thailand.
- October 24, 2019– Inducted into the Hall of Fame of Asian Institute of Technology (AIT) on the occasion AIT of 60th Anniversary
- Dec 24, 2016– Honorary Degree of Doctor of Philosophy, awarded by KL University, Andhra Pradesh, India, in recognition of exceptional contribution to the public through professional activity
- June 8, 2016– Inducted into Thailand's Academy of Science of the Royal Society of Thailand by the Royal Command of His majesty the King Bhumibol Adulyadej of Thailand
- Mar 18, 2015– Honoris Causa Doctor of Science (D.Sc.), awarded by Sam Higginbottom Institute of Agriculture, Technology and Sciences (SHIATS), Allahabad, India, "for his wisdom and dedication, as a scholar and top administrator of an international institute with the noble goal to foster international cooperation in this Asian Century".
- Nov 19, 2008– The First Nishino Medal, An award in memorial of the late Professor Fumio Nishino, in recognition for international contribution in the area of structural engineering. The award was presented at the beginning of the Eleventh East Asia Pacific Conference on Structural

Engineering and Construction (EASEC-11) in Taipei, Taiwan.

- Dec 05, 2003– Bestowed the Royal Decoration of the Companion of the Most Admirable Order of Direkgunabhorn (4th class) by H.M. King Bhumibol.
- Nov 25, 1997– Model Concrete Man of the Year” awarded by the Association of Thai Concrete Product Industry for the benevolent contributions to the civil engineering industry.
- Sep 1, 1977– Earle C. Anthony Award from University of California, Berkeley.
- May 1, 1973– Top Academic Performance Award (G.P.A. 4.0) among 1973 AIT graduating class of 400 students, honored by AIT Alumni Association.

Current (As of 2024)

- Professor Emeritus, Asian Institute of Technology, Thailand.
- Member of the Executive Committee, Asian Institute of Technology, Thailand.
- Founding Council Member, Executive Committee Member, and Chair of Academic Committee of VISTEC since 2015.
- Council Member of King Mongkut University of Technology, Thonburi (KMUTT).
- Council Member of Hua Chiew Chalerm Prakiat University, Bangkok, Thailand.
- Chair of Academic Board, HOG International Academy
- Fellow, Thailand Academy of Science and Technology
- Fellow, The Royal Society of Thailand

Past Affiliation

- Vice President, Engineering Institute of Thailand (EIT) under H.M. the King's Patronage
- Member, American Society of Civil Engineers (ASCE)
- Member, International Association for Bridge and Structural Engineering (IABSE)
- Member of the Executive Council, International Association for Computational Mechanics (IACM)
- Founding Secretary General and Chairman Emeritus of the International Steering Committee, The East Asia-Pacific Conference on Structural Engineering & Construction (EASEC)

Agri-Business Management (ABM)

Agriculture plays a vital role in the economic development of a majority of developing countries. Moreover, agriculture is the provider of food and feed to the world. The agro-industries are also contributing to the growing industrialization of developing countries leading to the increasing importance of agri-products. The development of agribusinesses is also influenced by trade policies. Thus, the management of agribusinesses requires a holistic skill set to navigate challenges posed by the inherently unpredictable nature of agricultural products and government policies. Agribusiness management has far-reaching consequences for many sustainable development goals, including but not limited to SDG1 (no poverty), SDG2 (zero hunger), SDG3 (good health and well-being), SDG5 (gender equality), SDG6 (clean water and sanitation), SDG8 (decent work and economic growth), SDG9 (industry, innovation, and infrastructure), SDG12 (responsible consumption and production), SDG13 (climate action). Thus, there is a need for sustainable transformation of agro-food enterprises which requires a new breed of agribusiness managers. Hence, the agribusiness management program at AIT caters to the unique needs of agribusiness professionals by equipping them with the knowledge and skills required to excel in globally competitive agro-industries. The agribusiness managers trained at AIT are market-ready to enhance the performance of small, medium, and large-scale enterprises. Agribusiness Management also aims at enhancing entrepreneurship among primary producers of agri-food products, and traders and other market intermediaries in the value chain.

FOCUS AREAS

- Agribusiness Development
- Agricultural Sector and Policy Analysis
- Agri-Food Value Chain Management
- Agro-Industrial Systems Development
- Climate Smart Agriculture and Food Security Contributions of Agribusinesses
- Food Safety, Food Waste, and Standardization
- Innovations and Entrepreneurship in Agribusinesses
- Risk Management in Food Marketing Channels
- Sustainable Agro-Food Systems
- Sustainability Assessment of Agro-Industries

PREFERRED BACKGROUND

The applicant should hold a Bachelor's degree in an appropriate field of study (for Master's program), and Masters's with coursework and thesis study (for Ph.D.). Eligible undergraduate degrees include: Agricultural Sciences, Environmental Sciences, Management Sciences, Social Sciences, or other relevant degree programs.

Minimum GPA – 2.75 or equivalent at Bachelors level (for Master program) and 3.5 or equivalent at Masters level (for Ph.D.).

COURSE STRUCTURE

Course Code	Course	Number of Credits	Description/Course Objective	Semester
ED80.03	Agribusiness Management: Principles and Practices	3	Agriculture has traditionally been viewed as a subsistence activity. This perspective is rapidly changing due to globalization of commercial food markets. Agribusiness management, bearing multi-disciplinary characteristics, covers aspects of policy, finance, technology and entrepreneurship. The course will provide a broad overview of agribusiness management and will introduce various contemporary issues in terms of their influence on agribusiness development. Furthermore, this course aims to equip students with theoretical principles of management, its functions, and its practical applications.	Aug Sem
ED80.04	Safety and Standardization of Food Products	3	To provide the students with knowledge on the need for greater quality assurance, standardization and traceability in the food systems. The course emphasizes food quality control as the mechanism for the prevention of food-borne illness and food spoilage at the "farm-to-fork" level.	Aug Sem

Course Code	Course	Number of Credits	Description/Course Objective	Semester
ED80.05	Agri-Food Supply Chain Management	3	This course provides broad knowledge of various management issues related to food supply chains, including farm level production to post-harvest management. The course discusses functioning of each sector of food supply chains and how these sectors can be coordinated and integrated to ensure availability of safe food.	Jan Sem
ED80.07	Marketing Management and Trade Policies in Agribusiness	3	This course provides students with marketing management skills and exposes them to issues of trade policies in agribusiness. It also examines how the issues of trade policies and marketing can be managed effectively.	Aug Sem
ED80.08	Applied Managerial and Agribusiness Economics	3	This course provides students with marketing management skills and exposes them to issues of trade policies in agribusiness. It also examines how the issues of trade policies and marketing can be managed effectively.	Aug Sem
ED80.09	Agro-Industrial Development	3	The objective of this course is to provide the framework and strategies of establishing and operating enterprises in the agro-industry for development. The interactions among raw material supply, processing, factors affecting site selection and layout for retail, wholesale and processing enterprises will be important aspects of this course.	Jan Sem
ED80.10	Statistical Methods for Research in Agribusiness	3	This course provides students with statistical techniques and useful skills for collecting, designing, analyzing and interpretation of data that can be used in the research and decision making process in agribusiness environments.	Jan Sem
ED80.11	Analytical Techniques and Decision Tools for Agribusiness	3	Sound understanding and working knowledge of decision making techniques and tools are important in agribusiness management. This course provides understanding to quantitative decision-making methods for effective agribusiness management in resource allocation, scheduling, risk analysis, and forecasting. Emphasis is given to problem identification, model formulation and analysis, and interpretation of results under multiple criteria decision making conditions.	Jan Sem

Minor details : The following courses have been identified to be offered as 'Minor' in the ABM Academic Program

Course code	Course title	Credit	Semester
ED80.03	Agribusiness Management: Principles and Practices	3(45-0)	August
ED80.07	Marketing Management and Trade Policies in Agribusiness	3(45-0)	August
ED80.09	Agro-Industrial Development	3(45-0)	January
ED80.10	Statistical Methods for Research in Agribusiness	3(45-0)	January

Agricultural Systems And Engineering (ASE)

In response to regional demand for professional training, two areas of specialization are offered: Agricultural Systems (AS) and Agricultural Engineering (AE). Students are trained to develop, adopt, and disseminate knowledge that focus on the utilization of technologies and management of biological and agricultural systems and natural resources. Both AS and AE are in a productive alliance to complement each other within the wide spectrum of activities being undertaken at Agricultural Systems and Engineering (ASE). The ASE places its emphasis on sustainable agricultural development based on a holistic understanding of agronomic and biophysical production factors, from the perspective of producers and the effects of economic and social forces on agricultural enterprises. It highlights the application of biological sciences, engineering, socio-economic policies and programs, and support services to agriculture to increase the efficiency of agricultural production systems through availability and efficient use of inputs and management of natural resources.

FOCUS AREAS

Agricultural Systems (AS)

- Crop Water Management
- Crop Tolerance to Soil and Environment Stresses
- Climate Change Adaptation and Food Security
- Climate-Smart Agriculture
- Sustainable Crop Production
- Conservation Agriculture
- Crop Nutrient/Pest Management

Agricultural Engineering (AE)

- Precision Agriculture
- Cropping System Modelling
- IoT and Drones in Smart Agriculture
- On-Farm Irrigation Water Management
- Agricultural Machinery and Mechanization
- Artificial Intelligence and Big Data in Agriculture
- Remote Sensing and GIS Applications in Agriculture
-

PREFERRED BACKGROUND

- Bachelor of Science and Biological Sciences
- Bachelor of Agricultural/Electronics/Biotechnology/Mechanical Engineering
- Bachelor of Computer Science/or Any Relevant Engineering Discipline
- Bachelor of Science in Agriculture
- Bachelor of Food Science and Technology
- Bachelor of Dairy Technology
- Bachelor of Science in Biochemistry
- Bachelor of Science Biotechnology

COURSE STRUCTURE

Course Code	Course	Number of Credits	Description/Course Objective	Semester
ED70.03	Agricultural Systems Analysis	3	Agricultural systems with biological components interacting with social and economic elements are extremely complex in nature. This course is designed to introduce concepts and techniques of systems analysis in an agricultural context and to illustrate the value of holistic approach through a number of quite different case studies. The manager or the administrator of such a system constantly looks forward to those techniques or methods, which helps him in planning, scheduling and controlling the activities in the system. The course should help students in identifying rational ways to improve the efficiency of agricultural systems.	Jan Sem

Course Code	Course	Number of Credits	Description/Course Objective	Semester
ED70.05	Design and Testing of Agricultural Equipment	3	This course is essential for practicing design engineers, providing combined theoretical and practical techniques as well as using computer graphic design that can improve the design efficiency and improvement in performance of agricultural equipment through standard testing and evaluation. Students will have their opportunities to use engineering principle, innovation and computer aided design to develop selected machine and tool that appropriated to agricultural production in most of Asia.	Aug Sem
ED70.07	Agricultural Environments	3	Increased food production depends on judicious use of the changes of the environment, how they could be modified by land-management practices, and their consequences for land productivity. available agro-ecological resources. Therefore, maintenance of vegetation, management of pests, conservation and efficient management of soil, water and nutrients, and plant-residue management are essential components of appropriate land utilization. The selection of suitable crops and cropping systems and their management require knowledge of the climatic, physical and biotic determinants of plant growth, both in terms of their magnitude and quality. This course provides information on short-term and long-term.	Aug Sem
ED70.08	Crop Productivity Management	3	Crop productivity depends on eco-physiological conditions and crop management practices, and their interactions. Crops respond differently to soil and climatic conditions. The selection of suitable crops and crop-management practices for given geographical locations is critical for the sustainability of crop productivity. Crop productivity management demands a systems approach. Hence, understanding soil and aerial environments and their variability, performance of crops under such changing conditions while maintaining soil parameters that govern soil productivity are important in the overall management of crop productivity. This course provides students with an understanding of soil productivity, the dynamics of soil processes and their relevance for biomass production of crops.	Aug Sem
ED70.11	Farm Management Economics	3	To provide a framework for better understanding the operation and management of farming system by the subsistence and semi-subsistence farm household in the Asian region by (i) incorporation of the use of tools of farm management analysis in solving local problems, (ii) demonstration of the relationship of farm management research to policy formulation and its impact on farmers' income; and, (iii) development of the students' awareness of farm problems in different countries.	Aug Sem
ED70.12	Precision Agriculture	3	Precision agriculture is a new concept in production. The course aims to educate students to deal with the comprehensive approach to crop production planning and implementation. It deals with three key elements: information and advanced agricultural technologies, and management.	Jan Sem
ED70.13	Agricultural Soil Mechanics	3	Knowledge of soil-water interactions is necessary to understand the crop water response to inputs. Similarly, to design the mechanisms or systems and tools used in for off-road conditions and in soils knowledge of tillage and traction theories is essential. This course is designed to upgrade students with related theories and practices.	Jan Sem
ED70.14	Instrumentation and Measurement Techniques	3	There is no substitute for careful experimentation as well as analyses techniques interpreting experimental data in many areas of basic research and applied product development. It is mandatory to use reliable instruments and to follow standard procedures to obtain accurate results in experimental research. This course is designed to give students a sufficient background of analytical and experimental considerations of various instruments and how to use them for the measurement of various parameters some of which they might come across in their thesis research and further professional activities.	Jan Sem
ED70.16	Controlled Environment Agriculture	3	Intensive agricultural production in controlled environment is becoming popular to overcome limitations of agricultural land and vagaries of nature, especially for the production of high value crops. The objective of the course is to provide understanding of the factors involved in greenhouse and nursery production of high value crops and plants.	Aug Sem
ED70.17	Crop Eco-physiology and Modeling	3	Crop responses to physical, biotic and management parameters determine the magnitude and quality of yield. Physiological parameters determine the net assimilation in a crop system. Knowledge of physical, biotic and management parameters and their interactions will help ensure optimal productivity of cropping systems. Computer simulation models of the soil/crop/atmosphere system help understand the processes determining crop responses to changes in system components, predict crop performance under different location-specific conditions, and guide management decisions.	Jan Sem
ED70.18	Integrated Pest Management	3	Integrated pest management (IPM) has become the conceptual basis for small- and large-scale plant protection programs, throughout Asia. This course emphasizes the ecological basis of pest management, the techniques and experiences involved and place them in context with socio-economic aspects. Therefore, this course will be offered to provide guidance on how to approach pest management in its entirety and how to practically handle a case using a learning cycle approach, experimentation based on science.	Jan Sem

Course Code	Course	Number of Credits	Description/Course Objective	Semester
ED70.21	Agricultural Sector and Policy Analysis	3	To develop an understanding of the role of agriculture sector on economic growth and its policy impact on food security, income distribution and environmental improvement which are essential for sustainable development.	Aug Sem
ED70.24	Sustainable Agriculture: Production, Operations & Systems	3	Agricultural production systems differ widely in terms of their operations and performance. Selection of appropriate production system is largely influenced by (and vice-versa, affects to) the region's prevailing demography, environment, economy and infrastructure which eventually determines the status of poverty and food security. This course provides broad knowledge of the various farm production activities carried out by suitable agricultural machines and equipment – in the broader context of sustainability. Energy input-output analysis approach is followed to meter and compare different operations and systems on sustainability yardstick.	Aug Sem
ED70.25	Sustainable Agriculture and Ecological Farming	3	To impart knowledge on major and emerging issues and viewpoints confronting modern, high-input industrialized agriculture and society in relation to conservation of the soil, environment and sustainable development through effective management of agricultural resources.	Aug Sem
ED70.9003	Smart Irrigation System	3	Smart irrigation systems can save a huge amount of water and help to achieve agricultural sustainability. A significant amount of water is wasted if traditional irrigation methods are used due to inefficiencies in irrigation, evaporation, and overwatering Smart irrigation systems use the latest technologies such as sensors/models/IoT devices for real-time or historical data monitoring to provide efficient irrigation schedules. The course provides students with an understanding of applications of smart irrigation technologies to optimize water use for crops. Students will also become familiar with variable rate irrigation (VRI) technology and cropping system modeling. The course aims to educate students to better understand and deal with sensor- and crop-model-based decision support tools for efficient irrigation management using smart irrigation technologies.	Aug Sem
ED70.9004	Remote Sensing & GIS Applications in Agriculture	3	For optimum utilization of available agricultural land resources on a sustainable basis, timely and reliable information regarding their nature, extent, spatial distribution, potential and limitations are very important. The efficiency and accuracy of data are improved when remote sensing data products and Geographic Information Systems (GIS) are used. The course provides students with an understanding of applications of spatial tools such as Remote Sensing, GIS, and GPS for storing and analyzing spatial data that can help in decision-making in agriculture. Students will also become familiar with applications of Remote Sensing and GIS in the context of agriculture in the assessment of crop area extent, identification of pest infestation, management of water resources, yield assessment studies, agriculture disaster management, and precision agriculture. The course aims to educate students to apply their new skills to one of several case studies in topics on agriculture, pest management, crop monitoring, water resource management, and risk assessment among others.	Jan Sem

The following courses have been identified to be offered as 'Minor' in the ASE Academic Program:

Agricultural Systems, Engineering, and Agribusiness (ASEA)

Introduction / Background

The Agricultural Systems, Engineering and Agribusiness (ASEA) program is an interdisciplinary program that integrates agricultural science, engineering, and agribusiness to address the challenges of modern and sustainable food systems. The program equips students with technical knowledge and practical skills across agricultural production, bio-processing, value chains, and agribusiness management.

With a strong focus on sustainability, climate resilience, and innovation, ASEA prepares graduates for careers in agriculture and agribusiness sectors, agri-technology, food industries, digital agriculture and development sectors, as well as for advanced study and research in agriculture and related fields. The program aligns closely with international development priorities, including climate-smart agriculture, sustainable intensification, digital agriculture, and the United Nations Sustainable Development Goals (SDGs)—particularly SDG 2 (Zero Hunger), SDG 12 (Responsible Consumption and Production), and SDG 13 (Climate Action).

Areas of Specialization

- Agribusiness Management (ABM)
- Agricultural Economics (AgEcon)
- Soil and Water Conservation Engineering (SWCE)
- Digital Agriculture (D-Agri)
- Agronomy
- Horticulture
- Soil Science

Focus Areas

The ASEA program integrates three critical focus areas:

Agricultural Systems– emphasizing crop and natural resource systems within socio-economic and environmental contexts;

Agricultural Engineering and Technology– focusing on precision agriculture, irrigation systems, mechanization, automation, sensing, modeling, and digital agriculture solutions; and

Agribusiness Management– covering value chains, agri-entrepreneurship, market analysis, supply chain logistics, and policy frameworks.

Preferred Background

The applicant should hold a minimum GPA of 2.75 or equivalent at the Bachelor's level (for Master's program) and 3.5 or equivalent at the Master's level (for Ph.D.).

Eligible undergraduate degrees include:

- Bachelor of Science and Biological Sciences
- Bachelor of Agricultural/Electronics/Biotechnology/Mechanical Engineering
- Bachelor of Computer Science/or Any Relevant Engineering Discipline
- Bachelor of Science in Agriculture
- Bachelor of Food Science and Technology
- Bachelor of Dairy Technology
- Bachelor of Science in Biochemistry
- Bachelor of Science in Biotechnology
- Bachelor of Agricultural Sciences, Environmental Sciences, Management Sciences or Social Sciences

Aquaculture and Aquatic Resources Management (AARM)

Introduction / Background

AARM is committed to improving regional institutional capacity in aquaculture and aquatic resources management through innovative approaches that integrate education, research, and outreach. These activities support the sustainable development of aquatic food systems and contribute to food security, nutrition, and socio-economic resilience in the region.

Asia contributes over 90% of global aquaculture production and plays a key role in the development of appropriate cultural systems and technologies. Aquaculture production accounts for almost half of the world's fish supply and continues to increase. Further development of aquaculture is also expected to help us move away from dependence on overexploited capture fisheries resources and to enhance and conserve aquatic habitats and biodiversity, but this expansion should not exceed the carrying capacity of water resources.

Wild aquatic resources are essential sources of nutrition for rural populations. Any degradation of these resources from over-fishing, use of illegal fishing gears, the introduction of exotic fish, misuse of chemicals, agro-industrial waste discharge, deforestation, breeding ground degradation and dam construction that can lead to blocking of migratory pathways will have dramatic impacts on the nutritional and health status of rural people.

Population growth, poverty, resource use conflicts, illegal activities, pollution, biodiversity conservation, policy, and institutional gaps, and conflicts are the major issues and problems in coastal management. A management approach that integrates sectors (government agencies, non-government organizations, community, etc.), disciplines (science, engineering, and management), land- and sea-based activities (agriculture, livestock, aquaculture, fisheries, tourism, etc.) is important to address the various issues and problems in the coastal area.

Areas of Specialization

The areas of specialization offered by AIT Aquaculture that integrate cross-sectoral and multidisciplinary themes are:

Sustainable Asian Aquaculture Technology (SAAT)

- Appropriate systems and technologies for inland and coastal aquaculture
- Management of Asian aquaculture systems
- Artificial breeding technology for finfish and shellfish
- Genetic improvement of finfish and shellfish

Aquatic Animal Health Management (AAH)

- Diagnosis, prevention, and management of aquatic animal diseases
- Vaccine technologies and delivery systems
- Functional Immunostimulants
- Sustainable alternatives to antibiotics

Aquatic Resources and Ecosystem Management (AREM)

- Management of coastal and inland aquatic ecosystems and fisheries resources
- Combating over-fishing and indiscriminate fishing practices
- Impact of exotic fish, agro-industrial waste discharge, dam constructions

Integrated Coastal Management (ICM)

- Sustainable resource use considering competing claims
- Multisectoral and multidisciplinary management approach
- Combating climate change impacts on fisheries and aquaculture

Focus Areas

- Genetics and Stock Enhancement for Aquaculture
- Aquatic Animal Health Management
- Development of Vaccine & Functional Immunostimulants
- Sustainable Alternatives to Antibiotics
- Sustainable Aquaculture and Production Systems
- Aquatic Resource Management & Governance
- Climate Change Adaptation in Aquaculture

Preferred Background

Should hold a Bachelor's degree in an appropriate field of study (for Master's courses), and Masters with course work and thesis study (for PhD).

Eligible undergraduate degrees include: Fisheries Science, Aquaculture, Mariculture, Agricultural sciences, Biology, Marine Biology, Life Science, Geography, Environmental Sciences, Computer Science, Agricultural/Civil engineering, or Social Sciences.

Minimum GPA – 2.75 or equivalent at Bachelors level (for Master's courses) and 3.5 or equivalent at Masters level (for PhD).

Course Structure

Course Code	Course	Number of Credits	Description/Course Objective	Semester
ED71.04	Aquatic Seed Production	3	The objective of this course is to enable students to acquire a sound knowledge of the reproductive biology, breeding behaviour and larval development of the important cultivable finfish and shellfish in aquaculture. The course will familiarize them with specific hatchery techniques including broodstock management, larval rearing, feeding and nursery rearing protocols. The course also endeavours to provide skills necessary for hatchery managers through practicum and on-field training.	Aug Sem
ED71.36	Aquaculture Nutrition and Feed Technology	3	The objective of this course is to provide a thorough knowledge on the scientific principles of aquaculture nutrition and the application of that scientific knowledge (feed technology) to produce nutritious, water-stable, and aquatic-pollution-minimizing fish feeds. Students will also develop hands-on skills on formulating fish feeds, manufacturing techniques, feed storage, designing appropriate feeding systems, and conducting nutritional experimentation.	Aug Sem
ED71.52	Research Workshop	2	This course provides students with theoretical knowledge and practical skills to identify research problems in food production systems and to conceptualize research projects to resolve them. The students get familiar with various research planning approaches, proposal development tools, and writing and presentation of a research proposal and thesis/ dissertation.	Jan Sem
ED71.55	Statistics for Aquaculture and Fisheries Management	3	Research issues in aquaculture and fisheries are diverse which may range from conducting laboratory experiments under controlled environment to field surveys to collect data and analyze complex interactions of socio-economic and environmental factors. Students need in-depth knowledge and skill on both scientific experimentation and survey designs in order to generate or collect reliable data. After acquiring required data, they need both theoretical knowledge and practical competency in using relevant statistical tools. They also need skills on analyzing and interpreting both qualitative information and quantitative data to find solutions to the research problems. Therefore, this course provides theoretical knowledge to the students and helps them develop required skills to become experienced researchers.	Jan Sem
ED71.9021	Selected Topic: Applied Genetics in Aquaculture	3	The application of genetics and biotechnological tools to improve aquaculture production has advanced greatly over the past few decades. These include the characterization of wild genetic diversity and genetic improvement of cultured stocks. However, such applications are still lagging behind agriculture and livestock sectors as most of the cultured fish are still genetically similar to their wild counterparts. More emphasis on domestication of the stocks with high performance traits and adopting appropriate broodstock management strategies could help overcome the negative effects of inbreeding and unintentional selection. This course is aimed to provide students with the basic concepts of applied genetics and selective breeding with emphasis on sustainable management of fish stocks, and conservation of genetic resources for aquaculture.	Aug Sem

Course Code	Course	Number of Credits	Description/Course Objective	Semester
ED71.9022	Selected Topic: Cleaner Aquaculture Systems	3	Demand for fish as food is projected to increase manifold in the decades to come and so intensification of aquaculture production has been one of the major priorities worldwide. The primary goal is to boost outputs from aquaculture in tune with the increasing demand for fish as safe and nutritious food for a booming global population without compromising the environmental capacity to sustain production. The objective of this course is to provide students with knowledge on the emerging approaches that have potential to boost aquaculture outputs without compromising environmental sustainability, in our pursuit to produce cleaner, safe and nutritious food from aquatic environments.	Aug Sem
ED71.9023	Selected Topic: Sustainable Seafood and Nutrition Security	3	Rapidly increasing human population is creating food security problems. Over 2 billion people are suffering from one or more forms of malnutrition. Even where food might be adequate, without balanced food, people cannot be healthy. Poorer countries and communities are encountering malnutrition due to lack of food or inadequate macro nutrients such as energy and protein, and micronutrient deficiencies such as Vitamins A, D, and minerals e.g. Calcium, Iron, Zinc, etc.). At the same time, in rich countries and among rich people obesity is another problem caused by imbalanced diet. From health point of view, seafood or aquatic food is the best source of protein, which contains a good profile of essential amino acids. However, many people are not aware of this fact and seafood is still not consumed due to different taboos and traditional/cultural barriers. As a result, it has been difficult to reduce malnutrition in some countries.	Aug Sem
ED71.9024	Selected Topic: Sustainable Seafood Business	3	Seafood products are highly traded items in both the local and global markets. Seafood production, processing and trading have been highly commercial and globalized activities, which have resulted in a competition tougher than before. More recently, regulatory requirements are becoming stricter and often more complex. This course provides students with practical Seafood business management tools in the production, processing, quality control, and marketing of Seafood products in both the local and global markets to ensure the long-run sustainability of seafood production.	Jan Sem
ED71.9025	Selected Topic: Sustainable Seafood and SDGs	3	Rapidly increasing human population is creating food security problems. Over 2 billion people are suffering from one or more forms of malnutrition or hunger. Hunger is one of the most important goal amongst the UN's 17 Sustainable Development Goals. Even where food production might be adequate, but accessibility, affordability and utilization can be the problems. Nutritionally balanced and safe diet is necessary for healthy life. Poorer countries and communities are encountering malnutrition due to lack of food or inadequate macro nutrients i.e. energy and protein, and micronutrients such as Vitamins A, D, and minerals e.g. Calcium, Iron, Zinc, etc. On the other hand, in rich countries and among rich people obesity is the main problem caused by imbalanced diets. From health point of view, seafood or aquatic food is the best source of protein, which contains a good profile of essential amino acids. However, many people are not aware of this fact and seafood is still not consumed and its potential has not been realized due to different taboos and traditional/cultural barriers. As a result, it has been difficult to reduce malnutrition in some countries.	Aug Sem
ED71.9026	Selected Topic: Aquaculture Health Management	3	Increasing intensity and output from aquaculture in response to the growing demand for fish as food also brings in a number of challenges, particularly concerned with diseases. Proper understanding of the pathogenic organisms and their effective control measures is essential to overcome the adverse impact of aquatic animal diseases on aquaculture production. This course is intended for students to understand the basic principles of aquatic health management, and to impart knowledge on preventive and remedial measures for maintaining healthy aquaculture stocks. The course will also introduce the concepts of biosecurity in farm management and the significance of quarantine measures that govern the transboundary movement of aquatic animals.	Aug Sem
ED71.xxxx	Selected topic: Applied Microbiology and Biotechnology in Aquaculture	3	Microbiology and biotechnology are widely applied in modern aquaculture. This course is designed specifically for postgraduate students under the Aquaculture and Aquatic Resources Management (AARM) program, which aims to introduce the students to how microbiology and biotechnology can be applied in the field of aquaculture. The course also centers on recent advanced technologies in aquaculture and farm management. Besides lectures, laboratory sessions emphasize on demonstrations and practical experiences for students.	Jan Sem

Minor details: Please find the courses listed below, identified for being offered as 'Minor' in the AARM Academic Program.

Course code	Course title	Credit	Semester
ED71.9021	Selected Topic: Applied Genetics in Aquaculture	3(30-45)	August
ED71.36	Aquaculture Nutrition and Feed Technology	3(30-45)	August
ED71.9024	Selected Topic: Sustainable Seafood Business	3(45-0)	January
ED71.xxxx	Selected Topic: Applied Microbiology and Biotechnology in Aquaculture	3(30-45)	January

Biomedical Engineering (BME)

Area of Specialization under the Industrial Systems Engineering (ISE) program

Biomedical Engineering (BME) is a new interdisciplinary academic program merging robotics, biological, and medical sciences, tailored for students with scientific backgrounds in chemistry, biology, health & life sciences, medicine, nursing, engineering fields, and biomedical fields. Housed under the School of Engineering and Technology (SET) and launched within the Industrial Systems Engineering (ISE) department, the Master program is designed to train future professionals who will play a crucial role in the regional medical sector in the coming years. Medical Engineering, broadly defined, seeks to enhance health quality by delivering technologically advanced solutions customized for clients, innovating modern medicine through engineering methods and tools; this approach addresses healthcare challenges and creates new opportunities in both academia and industry.

Research Focus Area

- Biomaterials
- Biosensors
- Nanomaterials and Coatings
- Prosthetics
- Medical Instrumentation
- Medical Robotics

Preferred Background

The program is open to all Science and Engineering student who are currently studying or working or doing research in any of the following fields:

- Science: chemistry, biology, health and life sciences, medicine, nursing, biochemistry, natural sciences, material sciences, physics.
- Engineering: biomedical engineering, chemical engineering, mechanical engineering, and robotics or electronic engineering.
- Medical: Medicine, radiology, dentistry, pharmacy, nursing

Opportunities

Students have the opportunity to obtain a "Minor in Entrepreneurship" during their studies. Students will learn entrepreneurial and business skills helping them in their future job or to start their own company. Details are at this link: <https://ait.ac.th/study/minor-in-entrepreneurship>

Other opportunities are Exchange at another university and Internship at a company. All those opportunities count for 12 credits and integrated into the curriculum.

Course Structure

During the first two semesters, master’s students are expected to complete the coursework requirement. In summary, a master’s student in Medical Engineering (MDE) follows: AUGUST SEMESTER

Course ID	Course Title	Credits	Remark
AT86.01	Biomaterials for Medical Engineers	3(30-45)	Required
AT86.02	Physiology for Medical Engineering	3(30-45)	Required
AT86.03	Biomechanics	3(30-45)	Elective
AT74.03	Sensing and Actuation	3(30-45)	Elective
AT72.03	Statistical Models and Design of Experiments	3(45-0)	Elective
AT84.01	Nano-Micro Fabrication Technology	3(45-0)	Elective
AT84.9001	In the Mind of the Entrepreneur – Part A	1.5(22.5-0)	Elective
AT82.03	Machine Learning	3(45-0)	Elective
AT81.15	Embedded Systems Architecture	3(45-0)	Elective

JANUARY SEMESTER

Course ID	Course Title	Credits	Remark
AT84.07	Biosensors and Bioelectronics	3(30-45)	Required
AT86.05	Medical Instrumentation and Imaging	3(30-45)	Elective
AT86.04	Tissue Engineering and Prosthetics	3(30-45)	Elective
AT84.06	Biomimetics	3(30-45)	Elective
AT74.05	AI and Neuro-Fuzzy Theory	3(45-0)	Elective
AT84.11	Entrepreneur in Action	3(15-90)	Elective
AT74.06	Pattern Recognition and Image Processing	3(30-45)	Elective
AT82.09	Human-Computer Interaction and Information Visualization	3(45-0)	Elective
	In the Mind of the Entrepreneur – Part B	3(45-0)	Elective

Note: The following elective courses are suggested whether the student wants to pursue a specialization in “Biomechanical engineering and Neuro-control” (BENC): AT86.02 – Physiology for Medical Engineering AT86.03 – Biomechanics AT86.04 – Tissue Engineering and Prosthetics AT74.05 – AI and Neuro-Fuzzy Theory AT82.09 – Human-Computer Interaction and Information Visualization The following elective courses are suggested whether the student wants to pursue a specialization in “Sensing and Imaging for Healthcare (SI4H)”: AT86.02 – Physiology for Medical Engineering AT86.05 – Medical Instrumentation and Imaging AT84.01 – Nano-Micro Fabrication Technologies AT84.06 – Biomimetics AT84.08 – Nanomaterials and Nanotechnology

Master Program Duration

	Thesis Option	Research Option
Required Courses	9 credits	9 credits
Elective Courses	17 credits	27 credits
Option	22 credits	12 credits
Total	48 credits	48 credits

Doctoral Program

The Doctoral program requires a minimum of 84 credits, including a minimum of 12 credits of coursework at AIT, which may include 3 credits of special study. This minimum credit requirement must be completed before the student is advanced to candidacy. The dissertation is worth 72

credits for the regular doctoral program.

Testimonials from Current Students

"As a pioneer student, I've learned that the path of discovery is often paved with uncertainties. Yet, with each step into the unknown, I have realized that overcoming apprehensions is the gateway to profound growth. Every class, every challenge as a student of Medical engineering at AIT has shaped who I am today. We are the architects of our futures, equipped with the knowledge to build bridges where there were gaps. Here is to embracing the challenges, cherishing the victories, and carrying the pioneering spirit forward. The best is yet to come." –Zainoor Ahmad Choudhry, 1st year student

"As a current student in Medical Engineering (MDE), I am passionate about using technology to improve healthcare. Every day, I am inspired by the potential of this field to make a real difference in people's lives. I see Medical Engineering as a bridge between medicine and technology, where innovation meets compassion. My studies are not just about learning; they are about preparing to contribute to a field that has the power to change the world for the better." –Napasorn Wora-anuwattanakul, 1st year student

Highlights

Our program is uniquely designed to enhance students' education and careers. Unlike traditional biomedical courses, it emphasizes a dynamic, hands-on approach, blending classroom instruction with practical experiences. The curriculum focuses on real-world applications, ensuring that students not only grasp theoretical concepts but also develop practical skills. We are committed to societal improvement through sustainable development, encouraging students to apply their knowledge for a positive impact. The international academic environment fosters a global perspective and cultural diversity. Our faculty and staff bring strong expertise to guide students throughout their academic journey, actively involving students in research initiatives contributing to medical engineering advancements, especially in the following areas: biomaterials, prosthetics, and instrumentation. Strategically aligned with industry needs, our program provides access to diverse job opportunities. The acquired skill set enhances graduates' competitiveness and opens doors to a range of career prospects. We aim to prepare the next generation of medical engineers, emphasizing not only academic excellence but also nurturing individuals equipped to drive innovation in healthcare and technology.

Climate Change and Sustainable Development (CCSD)

Area of Specialization under the Climate Change, Disaster and Urban Sustainability (CCDUS) Program

To visit the academic program page, [click here](#)

Climate Change and Sustainable Development (CCSD) Program at AIT is designed to produce professionals capable of assessing, finding options and delivering them for low carbon and climate resilient development. We offer Certificate, Master's and Doctoral degrees, and provide opportunities for students to specialize in specific or sectoral topics, such as energy, agriculture-land-use-and-forest, water, infrastructure, disaster, development, policy, financing etc.

The program is also tailored to conduct cutting-edge and solution-oriented research in climate change in an interdisciplinary setting. Our research focuses on low carbon and climate resilient communities, greenhouse gas accounting, technology needs, climate policy assessment, climate

financing, disaster and risk management, impact and adaptation to climate change in water, land, agriculture, and their nexus.

Science has said that the stabilization of global climate change is possible and we “can” substantially reduce the risks imposed by climate change. This requires new knowledge and consolidated actions. We thrive to develop next-generation climate leaders ready to take on these challenges and take-on new research frontiers to build a better knowledge base and facilitate actions.

Focus Areas

- Climate Change
- Sustainable Development
- Climate negotiation
- Climate finance
- Climate change mitigation
- Adaptation to climate change
- Carbon policy and market
- Climate impacts and vulnerability
- Climate-resilient society
- Climate smart

Preferred Background

Bachelor’s degree in science, engineering, social science, humanities, or management.

Course Structure

Course Name	Credits(Lecture hrs. – Lab hrs.)	Course Type	Semester Offered
Introduction to Climate Change and Sustainability	3(45-0)	Required	August

Computer Science and Communication Technology (CSCT)

Introduction / Background

The Computer Science and Communication Technology (CSCT) program provides a strong academic foundation in computing and communication systems that underpin modern digital societies and economies. The program is designed to develop professionals capable of developing robust and scalable software systems, analyzing and modeling data to extract actionable insights, and applying artificial intelligence methods to support intelligent and data-driven digital solutions, alongside the development of secure and efficient communication infrastructures.

CSCT integrates core areas in Computer Science and Software Engineering, Data Science and Artificial Intelligence, Digital Technology and Enterprise Information Management, and Smart Networks and Communications Engineering. This integrated structure reflects the close interaction between software, data, and communication technologies in contemporary digital environments, while allowing students to build depth in selected areas of specialization.

The program emphasizes solid theoretical foundations, system-level understanding, and applied problem solving, preparing graduates to contribute effectively in industry, government, and research settings. Through advanced coursework, applied projects, and research-oriented learning, CSCT equips graduates with the technical competence, adaptability, and professional readiness needed to succeed in a rapidly evolving digital landscape.

Areas of Specialization

The Computer Science and Communication Technology (CSCT) program offers the following areas of specialization

- Computer Science and Software Engineering (CSSE)
- Data Science and Artificial Intelligence (DSAI)
- Digital Technology and Enterprise Information Management (DTEIM)
- Smart Networks and Communications Engineering (SNCE)

Focus Areas

The CSCT program focuses on education and research in the following areas:

Software Systems and Application Development

- Software engineering and modern development practices
- Application and platform development
- Scalable and distributed software systems

Data Science and Artificial Intelligence

- Data modeling and data management
- Data science and advanced data analytics
- Machine learning and artificial intelligence
- Data mining, big data technologies, and deep learning

Foundations of Computer Science and Advanced Computing

- Algorithms and data structures
- Computational models and advanced computing concepts
- Systems architecture and performance

Enterprise Information Systems and Digital Platforms

- Information management systems
- Enterprise systems and digital platforms
- Data-driven organizational processes

Smart Networks and Communication Technologies

- Computer networks and data communications
- Telecommunications systems
- Wireless and mobile communication technologies

Applied Computing and Industry-Oriented Practice

- Real-world digital applications and system integration
- Project-based learning and internships
- Industry collaboration and innovation

Preferred Background

Master's Program

Applicants should hold an undergraduate degree in one of the following fields:

- Computer Science, Computer Engineering, or Information and Communication Technology (ICT)
- Electronics, Electrical Engineering, or related engineering disciplines
- Mathematics or other quantitatively oriented fields

Applicants from diverse backgrounds (e.g., business, finance, or other non-engineering disciplines) may be considered, provided they demonstrate adequate mathematical and programming skills.

Doctoral Program

Applicants should hold a relevant master's degree in Computer Science, Computer Engineering, ICT, Electronics, Mathematics, or closely related disciplines, with academic preparation aligned to the intended area of research.

Construction, Engineering and Infrastructure Management (CEIM)

Area of Specialization under the Civil and Infrastructure Engineering (CIE) program

The Construction, Engineering, and Infrastructure Management (CEIM) field of study prepares students to become effective managers and decision-makers familiar with the modern techniques of construction management, engineering management, and infrastructure management. It trains professionals to play a leading role in the international construction industry. It molds students to become active leaders in infrastructure development and management.

Program Brochure [Download](#)

Areas of Specialization

Students may choose to either specialize in Construction Engineering and Management (CEM) or Infrastructure Management (IM).

Construction Engineering and Managementcover advanced project management approaches to finance, plan, design, construct, monitor, and control construction projects. This master's degree program emphasizes in-depth construction project management approaches such as project organization management, construction planning, and control, project procurement, contract management, productivity analysis, and improvement, quality and safety improvement, IT in project management, sustainable construction, project financing, Public-Private Partnerships (PPP) for infrastructure management, international construction joint ventures and construction business strategy.

Infrastructure Managementfocuses on the processes necessary for the planning and development of new infrastructure, and on maintaining and operating mature infrastructure for sustainability. A wide variety of management topics are covered, such as infrastructure planning, infrastructure economics, infrastructure management systems, optimal maintenance management, reliability of infrastructure systems, asset valuation and utilization, and infrastructure planning under risk and uncertainty.

Professional Master in Project Management(with specialization in Construction projects)

The aim of this MPM program is to provide applied and advanced project management knowledge to professionals working in large-scale construction projects. The program is designed for one year to study period. Selected students are construction industry professionals with at least 3 years of experience.

Preferred Background

- Master Program

Undergraduate degrees in Civil Engineering, Mechanical Engineering, Electrical Engineering, Construction Engineering, Architecture, Quantity Surveying, Landscape Design, Interior Design, Business Studies, and other bachelor's degrees related to construction projects.

Degrees in other fields of engineering, urban and regional planning, architecture, quantity surveying, etc., are also considered

- Doctoral Program

Master's degree in Construction Engineering and Management, Infrastructure Management, or in any other field of civil engineering. Candidates with significant research or professional experience are highly preferred.

Development Innovation and Sustainability (DIS)

Introduction / Background

The Development Innovation and Sustainability (DIS) academic program is a consolidated and forward-looking initiative of the Asian Institute of Technology (AIT), developed in response to increasingly complex development challenges in Asia and beyond. It integrates the strengths of two established programs—Development Planning, Management and Innovation (DPMI) and Development and Sustainability (DS)—into a coherent, interdisciplinary, and practice-oriented program aligned with the SDGs and the people–planet–prosperity nexus. Contemporary development challenges—including environmental degradation, climate variability, social inequality, food insecurity, and rapid socio-economic transformation—require professionals who can work across policy, innovation, governance, and sustainability domains. Rooted in AIT's long-standing tradition of development planning, DIS provides strong foundations in policy, planning, project management, and participatory practice, complemented by an interdisciplinary sustainability perspective integrating social, economic, and environmental dimensions.

Core teaching and research areas include public policy and sustainable development, development planning and implementation, innovation systems for sustainability, climate change adaptation and resilience, environmental governance, socio-ecological systems and rural development, and inclusive and equitable development. The program draws on systems thinking, political economy, institutional theory, resilience and transition frameworks, and innovation and development studies, while emphasizing methodological rigor, ethical research practice, reflexivity, and critical thinking.

DIS equips researchers, managers, practitioners, and policymakers with the theoretical and practical knowledge and competences needed to design, implement, and evaluate inclusive and sustainable development interventions across diverse contexts.

Areas of Specialization

- Development Planning, Management, and Innovation (DPMI)
- Environment, Society and Governance (ESG)

Focus Areas

- Development Planning & Management
- Development Policy, and Governance
- Poverty Reduction & Sustainable Livelihoods
- Development Economics & Sustainability
- Development, Equity, Inclusion & Social Justice
- Institutions, NGOs & Development Management
- Urban–Rural Linkages & Rural Revitalization
- Socio-Ecological Systems & Resilience
- Social Innovation & Sustainable Development
- Sustainable Agriculture & Rural Development
- Climate, Environmental & Social Justice

Preferred Background

DIS welcomes applicants from diverse academic disciplines and professional backgrounds, especially those with interests in development planning, public policy and governance, sustainability and climate resilience, social innovation, socio-ecological systems, rural and agricultural development, and climate, environmental, and social justice. Candidates seeking interdisciplinary knowledge and skills for careers in academia, government, NGOs/CSOs, international organizations, or the public and private sectors are encouraged to apply.

Course Structure

- Development Policy and Practice
- Development Planning Workshop
- Social Innovation, Community Business and Sustainability
- Community Development Planning and Management
- Science, Society and Environmental Governance
- Social Impact Assessment
- Development Project Planning and Management
- Economics of Development and Policy
- Agriculture Development and Social Innovation
- Gender, Climate Change and Migration
- Public Policy
- NGO Management, Policy and Development Administration
- Socio-ecological Systems and Governance
- Qualitative Research Methods for Development
- Quantitative Research Methods for Development

Development Planning Management and Innovation (DPMI)

FOCUS AREAS

- Rural and Regional Planning
- Rural Urban Relations and rural vitalization
- Development Policy and Governance
- Poverty Reduction
- Agricultural Development and zero hunger
- NGOs and Development Administration
- Management of Change
- Social Innovation and Sustainability
- Science, Technology and Innovation
- Decentralization and Governance

TYPE OF DEGREES OFFERED

- Doctor of Philosophy (PhD)
- Master of Philosophy (MPhil)
- Master by Research (MSc)
- One year Master
- Flexible Master
- Diploma degree

PREFERRED BACKGROUND

- Master Program

Applicants are required to have a Bachelor degree in social sciences, and development studies or any related discipline.

- Doctoral Program

Applicants must hold a Master degree in any of the above disciplines

Doctor of Business Administration [DBA]

Our Doctor of Business Administration (DBA) program equips professionals with strategic thinking and research insights to tackle business challenges. Whether you seek career advancement, transforming your business, or academic contribution, you will learn from distinguished faculty through a rigorous curriculum.

Joining our program at AIT provides an international experience where students from various backgrounds come together to exchange ideas, broaden perspectives, and connect globally.

[Download Brochure](#)

[Apply Now](#)

Why Choose SOM's DBA

1. Flexible Program

- Program Duration: 3 years, with an option to extend up to 6 years.
- Program Delivery: Delivered in a weekend format to accommodate working professionals.
- Bangkok Campus (7 minutes walking distance from BTS Asoke & MRT Sukhumvit)

2. Designed for Executives

- Tailored for senior professionals with a minimum of 7 years of working experience.
- Applied Research Focus: Tackle real-world business problems using evidence-based research methods.

3. Asia-Focused Insights

- Multicultural Ecosystem: Based in Bangkok, at the heart of SE Asia's dynamic business landscape.
- With a deep understanding of regional business dynamics, our programs equip leaders with the agility to navigate Asia's complex economic and cultural landscape.

Required Course

DBA students complete the required coursework before beginning the dissertation. The DBA curriculum requires 9 credits of research methodology courses (1.5 credits each) and 6 credits of knowledge building (management-related) courses of your choice from our MBA/MSc courses.

Doctoral-Level Methodology Courses (1.5 credits each):

- Foundations of management research
- Management research methods and writing
- Data strategies & hypotheses testing
- Building models that link to theory
- Approaches of qualitative research
- Methods of qualitative research

Knowledge Building Courses:

Students select a total of 6 credits (2 courses, 3 credits each) from our MBA & MSc courses.

Special Study

DBA students take a research specialization study of 3 credits (SS) toward the end of their coursework. The student works with his/her supervisor on a topic of interest.

It will be tailor-made to the student's research focus and require understanding and a critical review of the theories and research in the field of specialization. The student will be required to prepare a review paper (a report) based on published research.

Dissertation

The dissertation is self-study and does not involve any formal coursework. Students are expected to meet with their supervisor and the committee members regularly during the dissertation development.

To be eligible for admission to the DBA program, an applicant must:

- Hold a bachelor's degree (generally from a four-year program) or its equivalent in an appropriate field of study from an institution of good standing acceptable to AIT;
- Have undergraduate grades significantly above average; the minimum cGPA requirement is 2.75 or equivalent.
- English Proficiency Requirement: AIT-EET:6 or IELTS-Academic:6 (writing 6) or TOEFL IBT: 80 (writing 21-23) or PTE Academic: 62-73 (Writing Score)
- A minimum of seven years of experience .

Intake

- Two entry/Year (January & August)
- Application Deadline: 30 June (for overseas applicants, requiring an educational visa) and 25 July (for other applicants)

Fees

1st Year Registration & Tuition Fees : 600,000 Thai Baht

2nd Year Registration & Tuition Fees : 600,000 Thai Baht

Tuition fees upon Thesis commencement : 300,000 Thai Baht

Total Fees: 1,500,000 Thai Baht (84 Credits)

Dual Degree Master's Program with Telecom Sud Paris (France)

AIT and Telecom SudParis have joined forces to offer a unique Euro- Asian curriculum at the master's level that addresses key issues in communication networks and services in both the European and the Asian contexts. After successful completion of studies in Asia and Europe, students earn both a Master's degree from AIT and an MSc degree from TSP.

Dual Degree Master's Program in Data Science and AI with Brunel University London (UK)

MSc in Data Science from Asian Institute of Technology, Thailand, and MRes in Data Science and Analytics from Brunel University London, UK.

About the Program

The aim of this dual degree program is to equip students with the research skills, knowledge, and specialist skills required to progress in their careers in industry and research. It helps students to develop a critical, research-led awareness of the state-of-the-art in data science and demonstrate the practical skills necessary to create value in its application to business, scientific, and/or social domains.

Program Brochure [Download](#)

Advantages

- Students are awarded two degrees in two years from prestigious and world-renowned universities. A degree of MSc in Data Science from Asian Institute of Technology, Thailand, and MRes in Data Science and Analytics from Brunel University London, UK.
- Students have the opportunity to work with doctoral students and the staff in the leading Intelligent Data Analysis Group in the Department of Computer Science.
- Students have the opportunity to develop a broader set of skills including study skills, research skills, employment skills, and capability skills through teamwork, guest lectures or workshops from industry, and dissertation projects with industrial/academic collaborations

Target group

Highly motivated and ambitious candidates with a bachelor's degree preferably in Data Science, Artificial Intelligence, Computer Science, or related fields.

Minimum Admissions Requirements

- A 2:2 or above UK Honours degree or equivalent internationally recognized qualification from a scientific, engineering, or a numerate subject.
- In terms of English language requirements: IELTS: 6.5 (min 6 in all areas) • Pearson: 58 (51 in all subscores) • BrunELT: 65% (min 60% in all areas) TOEFL: 92 (min 20 in all)

Semester	Aug-Dec(Year 1)	Jan-May(Year 1)	May-July(Inter-sem)	Sep-Dec(Year 2)	Jan-May(Year 2)	May-Sep(Dissertation)
Institute	AIT(Thailand)	AIT(Thailand)	AIT(Thailand)	Brunel(UK)	Brunel(UK)	Brunel(UK)
Degree		MSc Data Science			MRes Data Science and Analytics	

Admission Process

Interested candidates apply for admission with AIT and Brunel simultaneously. The application website is www.ait.ac.th/admissions/application-form/ for AIT. The application deadline is on 30 April. AIT will coordinate with Brunel on admissions and short-listed candidates will be jointly interviewed for admissions. Students will be admitted to both AIT and Brunel.

Dual Degree Master's Program in Geotechnical and Earth Resources Engineering with Colorado State University (USA)

MEng/MSc in Geotechnical and Earth Resources Engineering from Asian Institute of Technology, Thailand and MS in Civil Engineering from Colorado State University, USA

About the Dual Degree

The dual degree program gives students the opportunity to obtain two Master's degrees in two years. The aim of this dual degree program is to prepare students for careers in geotechnical and geoenvironmental engineering fields by providing strong theoretical academic knowledge and applied practice experience to the students.

Advantages

- Students are awarded two degrees in two years from prestigious and world-renowned universities. A degree of MEng/MSc in Geotechnical and Earth Resources Engineering from Asian Institute of Technology, Thailand, and an MS in Civil Engineering from Colorado State University, USA.
- Students have opportunities of networking with other students, researchers, and faculty from more than 50 countries during their studies at AIT and CSU.
- Students acquire knowledge and skills from unique curricula offered by the two institutes, including laboratory and field-scale experimentation, and mathematical modeling with high-speed computing facilities.
- Students have the opportunity to work jointly with AIT and CSU faculty members for their research study.

Target group

Highly motivated and ambitious candidates with a bachelor's degree preferably in Civil, Geotechnical, Earth Resources, Geosystem Exploration & Petroleum Geoengineering, or related fields.

Minimum Admissions Requirements

- Hold a Bachelor's degree in engineering or a closely related field (normally from a four-year program), or its equivalent;
- Have undergraduate grades significantly above average; the minimum GPA requirement for admission to the Master's Program is 3.0 or equivalent at the Bachelor's degree level;
- English Proficiency Requirement: IELTS 6.5 (writing 6 minimum) or TOEFL IBT: 80 (writing 21-23);
- Three letters of recommendation

Semester	Aug-Dec(Year 1)	Jan-May(Year 1)	May-July(Inter-sem)	Aug-Dec(Year 2)	Jan-May(Year 2)
Institute	AIT(Thailand)	AIT(Thailand)	AIT(Thailand)	CSU(USA)	CSU(USA)
Degree	MEng/MSc in Geotechnical and Earth Resources Engineering			MS in Civil Engineering	

Admission Process

Interested candidates apply for admission with AIT and CSU simultaneously. The application website is <https://www.ait.ac.th/admissions/application-form/> for AIT and <https://gradadmissions.colostate.edu/apply/> for CSU. The application deadline is on 30 April. AIT will coordinate with CSU on admissions and short-listed candidates will be jointly interviewed for admissions and scholarships. Students will be admitted to both AIT and CSU.

Scholarships

AIT (First year): AIT will award AIT Scholarships based on the selected candidate's academic credentials.

CSU (Second year): CSU will award a graduate assistantship (GTA or GRA) which covers a monthly stipend of approximately US\$ 1,800 and tuition

Note: The cost does not include international and local travel expenses and students need to pay approximately US \$1,100 per semester in student fees at CSU.

Dual Degree Master’s Program in Semiconductor Engineering with the National Taipei University of Technology (Taipei Tech), Taiwan

MSc. Semiconductor Engineering Program of the Department of Industrial Systems Engineering (ISE) of the Asian Institute of Technology (AIT), Thailand and MS in Semiconductor Engineering of Innovation Frontier Institute of Research for Science and Technology at the National Taipei University of Technology (Taipei Tech), Taiwan.

About the Dual Degree

The objective of this dual degree program is to prepare students for careers in semiconductor engineering, integrated circuit design, microelectronics, and related fields, by providing a strong theoretical and practical foundation that is necessary for careers in various sectors such as engineering consultancy, research, and academia.

Advantages

- Students are awarded two Master’s degrees in two years: one from the Asian Institute of Technology (AIT), Thailand, and one from the National Taipei University of Technology (Taipei Tech), Taiwan.
- Students have the opportunity to network by studying in two institutions at AIT and Taipei Tech, enhancing both technical expertise and global practices in semiconductor engineering.
- Students acquire knowledge and skills from a comprehensive curriculum offered by both AIT and Taipei Tech, covering key aspects of semiconductor engineering, with opportunities to specialize in advanced topics like VLSI design, microelectronics, and automation technology.
- Students have the benefit of collaborating with AIT and Taipei Tech faculty and utilizing advanced research facilities to enhance their research study.

Target Group

This program is designed for highly motivated candidates, including fresh graduates and mid-level professionals with a background in Electrical Engineering or related fields, seeking global expertise in semiconductor engineering.

Minimum Admission Requirements

- Holds a bachelor’s degree in Electrical Engineering or a closely related field (normally from a four-year program), or its equivalent.
- Have undergraduate grades significantly above average; the minimum GPA requirement for admission is 3.0 or equivalent.
- English proficiency requirement: IELTS 6.5 (writing 6 minimum) or TOEFL IBT: 80 (writing 21-23).

Semester	Aug – Dec(Year 1)	Jan – May(Year 1)	May – July(Intersem)	Aug – Dec(Year 2)	Jan – May(Year 2)
Institute	AIT(Thailand)	AIT(Thailand)	AIT(Thailand)	Taipei Tech(Taiwan)	Taipei Tech(Taiwan)
Degree	MSc inSemi-conductorEngineering (AIT)	MSc inSemi-conductorEngineering (AIT)	MSc inSemi-conductorEngineering (AIT)	MSc inSemi-conductorEngineering (Taipei Tech)	MSc inSemi-conductorEngineering(Taipei Tech)

Admission Process

Interested candidates must apply directly to either AIT (Option 1) or Taipei Tech (Option 2) on or before May 30. After submission, a joint selection committee from both institutions will review the applications based on academic merit and program suitability. Shortlisted candidates will be invited for an interview by faculty from both universities. Successful candidates will be jointly admitted to both AIT and Taipei Tech and will begin their studies at the designated institution.

Scholarships & Internship Opportunities

AIT and Taipei Tech offer scholarships and assistantships based on academic performance to help cover tuition and living expenses. Students will also have the opportunity to undertake internships at Delta Electronics (Thailand) and Taiwan Semiconductor Manufacturing Company Limited (TSMC).

Engineering Entrepreneurship

Become an Engineer Entrepreneur, Join our Engineering Entrepreneurship Program.

ABOUT THE PROGRAM

The Engineering Entrepreneurship Program combines advanced engineering knowledge with entrepreneurial skills and mindset. Choose any engineering discipline in our School of Engineering and Technology (SET) and add our Entrepreneurship Minor. Get two major skills in one program.

- Learn advanced engineering knowledge
- Learn how to start your own business
- Learn how to create new and innovative products, services, and businesses
- Gain technical expertise alongside team working, management, and entrepreneurial skills
- Learn how to write a business plan and pitch for investment
- Create a strong network

A list of all our engineering programs [Click Here](#)

Details about the Minor in Entrepreneurship [Click Here](#)

Download the Engineer Entrepreneur flyer [Download](#)

HOW TO APPLY

To apply, go to the AIT online application form by [Click Here](#) and choose the engineering program you want to study, and email us atsetadmissions@ait.ac.th regarding your interest to pursue a minor in Entrepreneurship.

Deadline

The application deadline is like our other programs. [Check Deadline](#)

Cost and Payment

The cost is the same as any other engineering program. All details to make payments are on this website, [Click here](#).

Scholarships

You are eligible for the AIT Scholarship and various other scholarships, e.g. from the Royal Thai Government and other donors. You do not need to separately apply for scholarships; we will automatically match you with the best package of scholarships available at the time of your application. A full list of scholarships is here.

Food Innovation, Bioprocessing, Nutrition and Health (FIBNH)

Introduction / Background

The Food Innovation, Bioprocessing, Nutrition and Health (FIBNH) program is an interdisciplinary academic program designed for students interested in food science, food technology, food engineering, nutrition, and health. The program focuses on developing sustainable, safe, and nutritious food systems by integrating food innovation, bioprocessing technologies, and evidence-based nutrition.

Students in the FIBNH program gain practical knowledge in food processing, value addition, functional foods, nutrition and public health, and modern bioprocessing methods. With a strong emphasis on sustainability, food safety, and health outcomes, the program prepares graduates for careers in the food and beverage industry, food innovation and R&D, nutrition and health organizations, regulatory agencies, and for advanced study in food science and related fields.

Areas of Specialization

- Food Innovation, Nutrition and Health (FINH)
- Food Engineering and Bioprocess Technology (FEBT)

Focus Areas

- Food Innovation, Design Thinking and Healthy Food Product Development Nutrition, Diet and Health Food Waste Valorization and Bio-circular Green Economy. Traditional Foods, Bioprocessing and Biotransformations Functional Foods and Nutraceuticals Nutrigenomics and Personalized Foods Food Safety Management Systems Nanotechnology in Food Product Design and Delivery Systems Delivery and pharmacokinetics of bioactive molecules
- Food Engineering Postharvest Technology Novel Food Processing Technologies Chemical Sensors, Biosensors and Sensing Technology for Food Safety Application Innovative and Sustainable Packaging Systems Biotransformation of Agro-industrial Waste and Value Additions Molecular Biotechnology and Food Safety Advance Bioprocessing and Tissue Culture Nanobiotechnology Microbial Physiology and Metabolic Engineering.

Preferred Background

Students can be from:

- Food Science, Food Technology, Food Engineering
- Nutrition Science

- Biotechnology,
- Bioprocess Engineering and Technology
- Chemical Engineering and Biochemical Engineering
- Industrial Technology
- Science in Microbiology
- Science in Animal Produce Food Safety
- Pharmacy
- Science in Agriculture, Fisheries and Livestock.
- Science in Food Safety
- Veterinary Medicine
- Agriculture, Fisheries and Animal Science related Degree.
- Medicine
- Science in Microbiology
- Science in Animal Produce Food Safety

Course Structure

- Food Engineering and Bioprocess Technology (FEBT)
- Food Innovation, Nutrition and Health (FINH)

Food Innovation, Nutrition and Health (FINH)

Area of Specialization under the Food Innovation, Bioprocessing, Nutrition and Health (FIBNH) program

The academic program is created and developed within the framework of the project Erasmus+ Capacity Building-MSc Food Processing and Innovation (FOODI), reference number 598987 with co-funding from the EU.

This program encompasses particularly unraveling the food-health nexus and addresses the issues that have not been addressed up to now. This program will develop students' higher-level thinking skills to gain a deep understanding of the multi-dimensional and multi-sectoral nature of the food security, food safety, and nutrition challenges and to be able to identify the innovative solutions to these challenges, such as the necessity to maximize the utilization of resources and to global supply chain strategy and to integrate the food and nutrition security, food safety homogeneously in all the region. This course aims to address in a sustainable manner to develop the modules as Professional Master Program (1 year), Full Master Degree Program (2 Years), and Doctoral Degree Program (3.5 years) in "Food Innovation, Nutrition, and Health (FINH)" to cater the graduates with the holistic knowledge. The course will provide the students with the skills necessary to function in roles in the food industry, public health sector, and food regulatory agencies.

Graduates will develop enhanced knowledge, skills, and competencies in relation to food and nutrition security, particularly in areas of innovative food product development, policy analysis and implementation in food safety, product design, implementation and management, and impact assessment. These skills will be situated in an understanding of the multi-sectoral nature of the challenges of food insecurity, malnutrition, and designer foods (Superfoods). Within the industry, graduates will work in areas such as research and development, product innovation, hygienic design, technical sales, product quality enhancement with the distinct advantage of bringing a nutrition perspective to all aspects of the food industry including product development, marketing, and sales. Within public health and regulatory agencies, graduates will work in the areas of nutrition and health promotions, food labeling regulations, and/or safety and Quality Standardization.

FOCUS AREAS

- Food Innovation,
- Design Thinking and Healthy Food Product Development
- Nutrition, Diet and Health
- Food Waste Valorization and Bio-circular Green Economy.
- Traditional Foods, Bioprocessing and Biotransformations
- Functional Foods and Nutraceuticals
- Nutrigenomics and Personalized Foods
- Food Safety Management Systems
- Nanotechnology in Food Product Design and Delivery Systems
- Delivery and pharmacokinetics of bioactive molecules

PREFERRED BACKGROUND

What is the background a student must have to attend the program

- Food Science, Food Technology, Food Engineering
- Nutrition Science
- Biotechnology,
- Bioprocess Engineering and Technology
- Chemical Engineering and Biochemical Engineering
- Industrial Technology
- Science in Microbiology
- Science in Animal Produce Food Safety
- Pharmacy
- Science in Agriculture, Fisheries and Livestock.
- Science in Food Safety
- Veterinary Medicine
- Agriculture, Fisheries and Animal Science related Degree.
- Medicine

COURSE STRUCTURE

Course Code	Course	Number of Credits	Description/Course Objective	Semester
-------------	--------	-------------------	------------------------------	----------

Course Code	Course	Number of Credits	Description/Course Objective	Semester
ED87.01	Food Safety Standardizations, Risk Management, and Traceability Systems	4 (4-0)	The course emphasizes food quality control as the mechanism for the prevention of food spoilage at the “farm-to-fork” level and food-borne illness, thus securing good public health. This subject helps the student to understand how food science and business stakeholders will be able to control the food safety hazards associated with the food including minimization of risk by understanding the food safety management systems, food quality management systems, hygienic design and processes and innovations in traceability systems.	Aug Sem
ED87.02	Gut Physiology, Metabolic Diseases, and Health	3 (3-0)	This course aims to explain how humans can extract energy from macronutrients (i.e. carbohydrates, proteins and lipids) with the progression from their digestion, absorption and transportation. Selected metabolic pathways, their regulatory mechanism and interaction of the metabolic pathways and their effects on human health. This course enables the students to understand the complex relationship between gut and health in a simple manner.	Aug Sem
ED87.03	Sustainable Food Process Design	3 (3-0)	This course aims to provide the scientific knowledge of food manufacturing and its link with the sustainable and innovative food processing technology by emphasizing on the principles and design of the systems including minimal thermal processing and green technology. In this subject, students will be exposed to the latest technologies and will focus on process control, food quality and safety, food packaging, and sustainable food processing.	Aug Sem
ED87.04	Molecular Nutrition, Food Toxicology, and Health	3 (3-0)	This course aims to provide knowledge on the molecular interactions of food macromolecules and micromolecules and their effects on processing, formation of hazardous, non-hazardous compounds and nutritional attributes in complex food systems and their effects on human health. In this subject, the students will be able to learn to understand the principles and mechanisms at molecular and cellular levels, to discover the mechanism driving the relationship between food nutrition and health.	Jan Sem
ED87.05	Design Thinking, and Innovations in Healthy Food Product Development	2 (2-3)	This course will offer an immersive experience in Design Thinking as a tool for innovative ideas and strategy development in Food Processing. Students will start in the field, where they discover the needs of the industry as a challenge. The students will be able to iterate application/ industrial oriented ideas to develop a range of promising possible solutions, create rough prototypes to take back out into the field and try to test it with real people in the target audience.	Jan Sem
ED87.06	Properties of Food Biomaterials and Nutrients	3 (1-6)	This course familiarizes students with various physicochemical properties of foods, biomaterials and nutrients. At the end of the course, students will be able to: 1. Identify the properties of foods and biomaterials 2. Describe and perform related measurement methods 3. Relate engineering properties of food and biological material to process design and quality control.	Jan Sem
ED87.07	Sustainable Food Production	3 (3-0)	This course has been designed with a rationale to identify and formulate the global challenges of sustainable food production and consumption. Alongside, it aims to define sustainable food production from multiple perspectives through critical thinking skills. The students are expected to take an active role in dealing with the challenges of our time through envisioning opportunities and challenging values of food production.	Aug Sem
ED87.08	Consumer Behaviour, Diet Preferences, and Marketing	3 (3-0)	This subject helps students to understand the consumer behavioral patterns of food demand and helps students develop an in-depth understanding of dietary preferences and marketing of the food industry.	Aug Sem
ED87.09	Food Supply Chain Management and Sustainability	3 (3-0)	This subject helps students to provide advanced knowledge of various management issues related to food supply chains, including farm to post-harvest management, and on innovative concepts of sustainability and traceability for maintaining the food quality during processing, storage, and distribution.	Jan Sem
ED73.15	Processing Effects on Functional Components of Foods	3 (3-0)	This subject helps students to provide knowledge on the molecular interactions of components and their effects on processing, nutritional attributes in complex food systems.	Jan Sem
ED80.10	Statistical Methods for Research	3 (3-0)	This subject aims to impart knowledge on the essential statistical methods for designing, conduct, data analysis, and interpretations of both experimental and observational data. This course will provide the students with statistical skills and techniques to apply them to data analysis and interpretation.	Jan Sem
	Thesis/ Dissertation	24/72		
	Internship	0

Gender and Development Studies (GDS)

Introduction / Background

Gender and Development Studies (GDS) develops scholars, analysts and practitioners who can integrate gender approaches in to development planning and management, and conduct original gender and development-related research for advancing development goals, including the Sustainable Development Goals, globally and in Asia. As an academic arm of community-based efforts for gender equality and for the advancement of rights and inclusion of women and individuals of all sexual orientation and gender identity expression, GDS aims to be a center of excellence in gender and development studies by integrating gender equality as a key intellectual perspective and ethical concern in sustainable development.

In order to achieve this vision, GDS

- Trains specialists in gender and development;
- Increases gender awareness among technology, management and development professionals;
- Generates knowledge through interdisciplinary research and publications in technology, development, and gender relations in Asian societies;
- Assists other institutions in Asia to strengthen gender studies through training, research and outreach; and
- Functions as an academic arm of community-based efforts for the advancement of women and sustainable development and individuals of all sexual orientations and gender identity expression

Areas of Specialization

All students enrolled at GDS will be specializing in gender and development studies.

Focus Areas

- Gender transformative approach to development
- Gender analysis/ assessment of policy/ programs/ organizations/ communities
- Gender and forced displacement/ migration
- Gender and culture
- Gender and labor/ care work
- Gender politics and human rights
- Science, technology and gender
- Gender based violence and social justice
- Gender, peace and security

Preferred Background

Gender and Development Studies (GDS) is an interdisciplinary and practice-oriented academic program committed to realize gender and social inclusion (GESI) in Asia and beyond through impactful research and practice.

As such, GDS prefers applicants who are strongly committed to GESI values.

For master program, undergraduate students' qualifications are normally in a social sciences or humanities subject but other backgrounds are also welcome. The first semester offers basic course that will introduce gender and development perspectives in order to prepare students from various backgrounds to follow GDS courses.

For PhD program, master's degree in social sciences or humanities subject are preferred.

Course Structure

Required courses:

- Gender and development: Principles and concepts
- Science, technology and gender
- Gender, culture and human development
- Gender and human rights

Elective courses:

- Gender and labor migration in Asia
- Gender and the economy
- Forced migration and human trafficking in the Greater Mekong Sub-region
- Design, Data, and Justice in a Digital World
- SOGIESC and Inclusive Development
- Gender, power and politics
- Gender analysis and gender responsive development planning
- Gender, peace and security
- – Qualitative Research Methods for Development
- – Quantitative Research Methods for Development

Geotechnical and Earth Resources Engineering (GTE)

Area of Specialization under the Civil and Infrastructure Engineering (CIE) program

Besides the traditional topics of soil mechanics, foundation engineering, earth structures, underground excavations, land subsidence, and landslide mitigations, land reclamation, ground improvement, geosynthetics engineering, analytical and numerical analyses, geotechnical engineers and researchers are increasingly involved in many new and dynamic areas of geoengineering and geo exploration. They are also challenged to solve geoenvironmental problems, the reduction of construction wastes, clean-up of contaminated sites, geological-related hazards as well as onshore and offshore exploration and production of new mineral and energy resources.

Program Brochure [Download](#)

Research Focus Area

Area of Specialization

The Field of study of Geotechnical and earth resources engineering (GTE) offers three major areas of specialization. Soil Engineering (SE), Tunnel Engineering (TE) and Engineering and Environmental Geology (EEG).

Special sub- specialization under GTE is Geosystem Exploration and Petroleum Geoengineering offers two specific areas of Subsurface Engineering (SSE) and Facility Engineering (FE)

In addition to the GTEs program offered the 1-year master's program and flexible master's program at the mother AIT campus in Bangkok, the field offers both GTE and GEPG programs.

Keywords

- Geological principles
- Rock mechanics
- Geophysical techniques
- Mineral and energy exploration and development
- Land subsidence mitigation
- Natural hazard mitigation
- Site investigation
- Terrain evaluation
- Underground excavations and tunneling
- Rock slope engineering
- Soft ground improvement and construction techniques
- Soil dynamics earthquake engineering;
- Earth reinforcement and earth retaining structures;
- Pavement design and construction
- Risk analyses and probabilistic methods
- Numerical methods and computer-aided design
- Geosynthetic engineering; and lightweight materials
- Geosystem engineering and exploration
- Exploration geophysics
- Petrophysics,
- Well-log interpretation,
- Reservoir characterization and engineering

Preferred Background

- Master Program

Undergraduate degrees in Civil Engineering, Geology, Geotechnical Engineering, Mining, Geophysics, and Petroleum Engineering; other disciplines are considered on a case-to-case basis

- Doctoral Program

Master's degree in Engineering Geology, Geotechnical Engineering, Geoenvironmental Engineering, Geophysics, Petroleum Engineering, and Mining. January-May Semester (12 credits)

Course ID	Course Title	Credits
CE71.51	Foundation Engineering and Design	3(3-0)
CE71.56	Ground Improvement Techniques and Geosynthetics	3(3-0)
CE71.53	Underground Excavation and Tunneling	3(3-0)
CE71.xx	Advanced Geotechnical Testing & Modeling	3(2-3)

The students can consider selecting one of the following recommended courses or from other programs that they see fit:INTER SEMESTER JUNE-JULY (2 credits): one of the following customized courses can be offered depending on the demands and availability of the invited lecturers

International Executive MBA [I- EMBA]

While most I-EMBA programs on the market focus on Foundational knowledge in Economics and Business Management (Finance, Human Resources, Operations, Marketing,...), the I-EMBA at AIT takes a bold step forward. In response to the global shift toward sustainable development, our program offers a distinctive blend of advanced Business Management Expertise, Sustainable Leadership Thinking, and Technology Management. This unique integration empowers learners to enhance their creativity in business and drive impactful transformation.

[LEARN MORE](#)

Why AIT SOM's I-EMBA

1. Globally Recognized Degree: Awarded by AIT and accredited by the Ministry of Education and Training in Vietnam.
Cutting-edge Curriculum: Align with global trends in Dual transformation "Digital and Green"
2. Global Exposure: Engage in a two-week Study-trip at AIT's Main Campus in Thailand
Flexible Schedule: Designed for working professionals, with classes held outside regular office hours.
3. 100% International Professors and Faculties from diverse industries in the world
Access a network of over 28.000+ AIT alumni around the world and 4,400+ AIT Vietnam alumni who hold key positions in government and global organizations.

Program Structure

Core Courses (30 credits):

- Change Management
- Strategic Management
- Accounting for Decision-Making
- Leadership and Organizational Management
- Marketing Management
- Responsible and Sustainable Management Decision-Making
- Operations Management
- Managerial Economics
- Managing Technology and Innovation
- Corporate Finance

Electives/ Final Project

(6 credits):

- Students may either take the electives as arranged by the Institute or choose to complete a final project.

Admission Requirements

Admission

To be eligible for admission to this AIT Professional Master's program, an applicant must:

- Hold a bachelor's degree (normally from a 4-year program) or equivalent, appropriate major, final score above 2.75 GPA
- A minimum of 5 years of work experience is required for admission, with a preference for candidates possessing 7 or more years (base on CV)
- Input English level:
- IELTS (5.0) or equivalent
- Or applicants can apply for English Test offered by AIT at AITCV (writing task 2). English Test fee: 1.239.719 VND (47 USD)
- Depending on the profile, the program will consider an interview

Admission Requirements:

- Admission Application Form
- Resume (maximum 2 pages)
- University degree and transcript (English)
- IELTS 5.0 or equivalent or EET-AIT 5.0 or higher
- Passport (scan with photo)
- 01 ID Card photo size 3x4

Schedule:

- Application Deadline: July 2026
- English Language Tests: Every Tuesday and Wednesday
- Opening: September 2026

Tuition Fees

Tuition Fees

- Tuition fee (all-inclusive): 313,622,530 VND (11,890 USD)
- Cost for two study trips to AIT, Thailand (optional): 52,754,000 VND (2,000 USD) (Excluding meals and personal living expenses)

Total tuition fee: 366,376,530 VND (13,890 USD), payable in three installments within one year.

If a participant is unable to complete the program within 1 year, an extension fee of 4,396,167 VND (167 USD) will be charged for each additional semester.

No additional tuition fees are required.

This exchange rate (1 USD = 26,377 VND) is only for reference.

Internet of Things (IoT) Systems Engineering

Researchers estimate that within a few years from now, a whopping 20.4 billion Internet of Things (IoT) devices will be connected. This surge in the number of IoT devices in use will translate into a significant increase in the number of IoT jobs as well. Clearly, a job in IoT can pay well because of the

rising demand, but candidates will require a combination of skills to ensure a promising IoT career.

The new Master's degree program "Internet of Things (IoT) Systems Engineering" is being offered by the School of Engineering and Technology (SET), Internet Education and Research Laboratory (intERLab), and minor and entrepreneurship program, Asian Institute of Technology (AIT) will be first-time launching in August 2020.

Internship Opportunities with The following Partners:

- Data Science Research Laboratories, NEC Corporation, Tokyo, Japan
- Department of Electronics Science and Technology, Tongji University, China
- Fujitsu, Network Systems Laboratory, Kawasaki, Japan
- Fraunhofer Heinrich Hertz Institute (HHI), Wireless Communications and Networks, Berlin, Germany
- National Electronics and Computer Technology Center (NECTEC), Thailand
- Silicon Craft Technology, Thailand
- Equator Solar Capital, Thailand
- Delta Electronics, Thailand, PCL
- Bombardier, Thailand Program Brochure [Download](#)

Research Focus Areas

- IoT Systems Design/Implementation
- Business Intelligence: a combination of software applications
- Software tools and procedures
- Data Security
- IoT Application Design with Mobile Applications
- Cloud Computing
- Wireless, and Mobile Technologies for IoT
- IoT hardware (electronics and communications)
- Quality Management
- Networking Issues
- IoT with AI-based Solutions/Systems

Preferred Background

Degree Certificate and Transcript of Undergraduate Degree and/or Master's Degree

Course Structure

Option 1. Regular M.Eng. or M.Sc (Thesis)

Within at least two years students can obtain a Master of Sciences (M. Sc.) degree by completing a 48 credits curriculum, consisting of 24 credits of coursework, and 24 credits for a thesis. The 24 credits coursework includes 2 three-credit required courses, 1 required Institute Wide Course (IWC), 1 zero-credit seminar, and 5 three-credit electives.

Option 2. Regular M.Eng. or M.Sc (Research study)

Within at least two years students can obtain a Master of Sciences (M. Sc.) degree by completing a 48-credit curriculum, consisting of 36 credits of coursework, and 12 credits for research. The 36-credit coursework includes 2 three-credit required courses, 1 required IWC, 1 zero-credit seminar, and 9 three-credit electives.

Option 3. Regular M.Eng. or M.Sc (New options with industry internship or with a minor)

Within at least two years students can obtain a Master of Sciences (M. Sc.) degree by completing a 48-credit curriculum, consisting of 24 credits of coursework, 12 credits of research, and 12 credits for an industry internship or some other minor. The 24-credit coursework includes 2 three-credit required courses, 1 required IWC, 1 zero-credit seminar, and 5 three-credit electives.

Option 4. M.S. (One-year)

In addition, this proposed new program can be also applied to the newly proposed M.Tech. within just one year to complete 30 credits of coursework which includes 24 credits of coursework (same as the thesis option) and 6 credits of project work.

Minor in IoT Systems Engineering

In addition, students from other programs in any school must select the two required courses and any two of the elective Courses as 12 credits (4 courses) for minors in IoT Systems Engineering.

The list of the required courses and possible electives are as follows:

Required courses

1. ATxx.xxxx: Internet of Things Technology and Design (IoT D), 3(1-6)(New) Semester: January (Dr. Attaphongse Taparugssanagorn, Arunya Dumunnage)
2. ATxx.xxxx: Wireless Technologies for Internet of Things (WTIoT), 3(2-3)(New) Semester: August (Dr. Attaphongse Taparugssanagorn)
3. ATxx.xxxx: Internet of Things Seminar (IoTS), 0(0-0)(New) Semester: January (All faculty members help invite guest speakers to give 2-hour talks)

Elective courses

4. ATxx.xxxx: In the Mind of an Entrepreneur, 3(3-0)(New) Semester: August/January (Prof. Dieter Trau)
5. AT77.20: Cross-Layer Design for Wireless Networks (CLDWN), 3(3-0)(Existing) Semester: August (Dr. Teerapat Sanguankotchakorn)
6. AT70.922: Machine Learning (ML), 3(3-0)(Existing) Semester: August (Prof. Matthew Dailey)
7. AT81.15: Embedded System Architecture (ESA), 3(3-0)(Existing) Semester: August (Dr. Mongkol Ekpanyapong)
8. AT81.14: Embedded System Design (ESD), 3(2-3)(Existing) Semester: January (Dr. Mongkol Ekpanyapong)
9. AT74.03: Sensing and Actuation (SA), 3(2-3)(Existing) Semester: August (Prof. Manukid Parnichkun)
10. AT74.05: AI and Neuro-Fuzzy Theory (AINF), 3(3-0)(Existing) Semester: January (Prof. Manukid Parnichkun)
11. AT73.20: Additive Manufacturing and Reverse Engineering (AMRE), 3(3-0)(Existing) Semester: August (Dr. Pisut Koomsap)
12. AT70.05: Computer Networks (CN), 3(3-0)(Existing) Semester: August (Adjunct faculty)
13. AT70.15: Advanced Topics in Internet Technology (ATIT), 3(3-0)(Existing) Semester: January (Dr. Adisorn Lertsinsruttavee)
14. AT80.9008: Mobile Application (MA), 3(2-3)(Existing) Semester: January (Adjunct faculty)
15. ATxx.xxxx: Cloud Computing (CC), 3(2-3)(New) Semester: August (Adjunct faculty)
16. ATxx.xxxx: IoT Security (IoTSec), 3(3-0)(New) Semester: January (Adjunct faculty)

The curriculum is comprised of the four main components:

- Wireless Technologies, Protocol, and Networking
- Data Science
- System Engineering
- Entrepreneurship

Joint Degree Programme with the University of Nice Sophia Antipolis (France)

A two-year joint programme is offered by the Asian Institute of Technology (AIT) in Thailand and the University of Nice Sophia Antipolis (UNS) in France. For a unique experience in Europe and Asia, students study for their first year at the School of Engineering and Technology (SET) of AIT and for their second year at Polytech Nice-Sophia of UNS. The double degree is completed after doing an internship in a company or a research study in Europe. Students will be awarded two Master degrees: one from UNS and one from AIT.

M/MSc Business Analytics and Digital Transformation (BADT)

Ranked 9th Asia according to the QS 2026 rankings, our Master/ M.Sc. in Business Analytics and Digital Transformation (M.Sc. BADT) program is designed to give student the skills and knowledge to use business analytics to become a driver for business change and a catalyst for successful digital transformation. It positions AIT Graduates' to take on leadership roles across industries and sectors. It focuses more on the application and interpretation of business analytics.

[Download Brochure](#)

[Apply Now](#) Program Director's Message Program Structure Admission and Fees

Required Courses (30 Credits)

- The Business of Frontier Technologies
- Developing Leadership Skills for the Digital Workplace
- Big Data Analytics
- Responsible and Sustainable Management Decision-Making
- Industry 4.0
- Leading Digital Transformation: Project and Change Management Strategies
- From Data to Decisions: Mastering Data Mining, Analysis and Predictive Analytics in Business
- Global Data Management
- Managerial Economics
- Agile Thinking for Digital Transformation
- Digital Marketing and Consumer Analytics

Minor (12 Credits)

- Management
- Digital Marketing
- Finance
- Entrepreneurship

Electives (6 Credits)

Students can choose to study 6 to 18 credits of electives, depending on the program plan (for the specializations noted above, 12 elective credits are required in order to graduate with a specialization).

To be eligible for admission to the BADT program, an applicant must:

- Hold a bachelor's degree (generally from a four-year program) or its equivalent in an appropriate field of study from an institution of good standing acceptable to AIT
- Have undergraduate grades significantly above average: the minimum cGPA requirement for admission to the Master's Program is 2.75 or equivalent, at the bachelor's degree level.
- English Proficiency Requirement: AIT-EET:6 or IELTS-Academic:6 (writing 6) or TOEFL IBT: 80 (writing 21-23) or PTE Academic: 62-73 (Writing Score) [More Information on English Proficiency Requirements](#)
- A minimum of one year of experience is preferable for an MBA.

Intake

- Two entries/Year (January and August) <https://ait.ac.th/admissions/>

Fees

- Total Fees : 848,000 Thai Baht (48 Credits) / 626,000 Thai Baht (36 Credits)

For more details, visit: <https://ait.ac.th/tuition-and-fees/>

In an increasingly digital and data-centric world, the ability to make strategic, evidence-based decisions is vital. The Master of Science in Business Analytics and Digital Transformation (BADT) at AIT equips students with both analytical capabilities and leadership skills to navigate today's complex business environments.

Our program is designed for professionals and aspiring leaders who want to drive innovation and shape the future of digital business. With a flexible structure, international faculty, and industry-relevant coursework, BADT offers a unique opportunity to gain hands-on experience and global perspectives.

I invite you to explore the possibilities that await you at the School of Management, AIT.

Dr. Tobias Endress

Director, BADT Program

MSc International Finance

The Master of Science in International Finance at AIT is a professionally oriented program designed for individuals seeking to enter or advance in the finance sector, regardless of academic background. It emphasizes applied, practical knowledge that prepares graduates to excel in today's fast-changing financial landscape. With a strong focus on ASEAN and emerging markets, the program equips students to make sound financial decisions, manage risk, and connect theory to real-world challenges. Graduates are well-prepared to lead and make a meaningful impact in the global finance industry.

Welcome to the International Finance Program. Whether you are beginning your studies or building on your expertise, you've chosen a field that plays a critical role in driving economic development and fostering progress. Finance drives innovation, supports infrastructure growth, and enables sustainable development. It creates opportunities to uplift communities, reduce inequality, and transform economies.

Effective business decisions require more than instinct—they depend on a clear grasp of financial principles and the ability to evaluate and manage risks and opportunities. Our program is designed to provide you with these critical tools, along with practical insights to address real-world challenges. I look forward to working with you as you develop the skills and knowledge to tackle global challenges and shape the future.

Dr. Joseph J. French

Master of Business Administration(MBA)

Our MBA is one of Asia's top-ranked programs, recognized by the QS Global MBA Rankings 2026 as #1 in Thailand for Employability, Top 30 in Asia, and among the top 200 globally.

The program equips students with strong business knowledge, practical skills, and leadership capabilities needed to succeed in today's global business environment. With an interdisciplinary curriculum and interactive, hands-on learning, students gain real-world insights while building the confidence to think broadly, work collaboratively, and lead effectively.

An MBA study is expected to take a minimum of 36 credits (1 year MBA) or up to 48 credits (2 year MBA). The Masters of Business Administration (MBA) is designed to equip students with effective, practical tools to tackle complex, real-life business challenges.

Required Courses (30 Credits)

- Accounting for Decision-Making
- Change Management
- Corporate Finance
- Leadership and Organization Management
- Managerial Economics
- Managing Technology and Innovation
- Marketing Management
- Operations Management
- Responsible Management and Sustainability
- Strategic Management

Electives (6 Credits)

Students can choose to study 6 to 18 credits of electives, depending on the program plan (for the specializations noted above, 12 elective credits are required in order to graduate with a specialization).

MBA Specialization

The MBA also allows for specialization in a range of management areas and for those on the 48-credit program

- Business Analytics
- Business of Frontier Technologies Industry 4.0
- Big Data Analytics
- Global Data Management
- Agile Thinking & Digital Transformation
- Digital Marketing & Consumer Analytics
- Digital Marketing
- Strategic Brand Management
- Digital Marketing & Consumer Analytics
- Consumer Behavior
- Service Marketing: Competing on Customer Experiences
- Entrepreneurship

- Entrepreneurship and New Venture
 - Entrepreneur in Action
 - In the Mind of an Entrepreneur
 - Decision Making, Risk & Opportunities
 - Finance
-
- Capital Market
 - Managing Risk
 - Applied Valuation & Investment
 - International Finance in ASEAN: Wealth Management to Infrastructure Finance

Dr. Kamonkanok

Director, MBA Program

Greetings to all future Leaders,

Welcome to the School of Management (SOM) at the Asian Institute of Technology (AIT)— where ambitious minds and bold ideas come together to shape the leaders of tomorrow.

In a business world defined by constant innovation, being a leader means more than mastering management knowledge — it means cultivating a mindset that embraces change, acts responsibly, and contributes positively to society. At SOM-AIT, our MBA program is thoughtfully designed to equip students not only with cutting-edge business expertise but also with a global mindset, a commitment to sustainability, and the agility to thrive in an increasingly digital and interconnected world.

What makes our MBA unique is the way we bridge academic excellence with real industry experience. Our faculty includes distinguished Ph.D. scholars alongside experienced executives and practitioners from top organizations worldwide. This co-teaching model brings the best of both

worlds to the classroom — rigorous theory and practical, up-to-date insights — ensuring that every lesson is relevant and applicable.

We also believe in the power of choice. Our students can tailor their MBA journey by focusing on Digital Marketing, Business Analytics, Finance, or Entrepreneurship and Innovation. Beyond these specializations, you can gain firsthand experience through internships, expand your horizons through exchange programs, and broaden your expertise with a minor in a complementary field. For those considering advanced research or a future Ph.D., a thesis track is also available.

At SOM-AIT, staying relevant and responsible is at the core of what we do. We continuously update our curriculum and activities to align with emerging business trends, ESG principles, and the rapid digital transformation shaping industries today. Our graduates are prepared to lead organizations with integrity, adaptability, and a commitment to creating lasting value for businesses and communities alike.

Equally important is the community you will join. Here, you will learn alongside peers from diverse backgrounds and generations, building a global network that supports you throughout your career. Many of our alumni now hold influential roles in Thailand and around the world — a testament to the professional and personal growth that an MBA from SOM-AIT offers.

As MBA Program Director — and as someone who has worked closely with both academia and industry — I am dedicated to making sure that your time at SOM-AIT is inspiring, practical, and truly worthwhile.

If you are ready to strengthen your skills, broaden your perspective, and be part of a network of professionals who drive positive change, we warmly welcome you to join the SOM-AIT MBA family.

Mechatronics and Machine Intelligence (MMI)

Area of Specialization under the Industrial Systems Engineering (ISE) program

At present, most academic institutions and industries in the Asian region are only system integrators. Components are procured from more developed countries (e.g. computer numerically controlled machines, robots, and automated guided vehicles) and are integrated as a system (e.g. flexible manufacturing system). To support the growth of the region's economy, expertise not only as system integrators but also as builders of components of advanced technologies must be developed. The growing number of electronic devices and the strong interactions between mechanical and electronic parts no longer permit separate investigations of these components.

Mechatronics and Machine Intelligence (MMI) provides new insights through an integrated consideration of mechanics, electronics and information technology. The curriculum is designed to provide multidisciplinary knowledge and to develop the ability to design mechatronics systems.

Programs leading to the award of AIT's Doctor of Engineering, Doctor of Technical Science, Master of Engineering, Master of Science, diploma and certificate are offered.

Program Brochure [Download](#)

List of Research Focus Area

MMI Research focuses on the design of new and advanced robotics mechanisms and controllers. Robot prototypes are always developed and tested. The current projects include

- Intelligent Vehicles
- Bicycle Robots
- Unicycle Robots
- Exoskeleton Robots
- Rehabilitation Machines
- Automatic Guided Vehicles
- Laser Guided Vehicles
- Robot Manipulators
- Multiple Robot Cooperation

Preferred background

- Master Program

Undergraduate degree in electronics, electrical engineering, mechanical engineering, computer engineering or science; other engineering disciplines.

- Doctoral Program

One should have a good master’s degree in one of the above disciplines.

Natural Resources Management (NRM)

Introduction / Background

The Natural Resources Management (NRM) academic program focuses on the sustainable management of terrestrial and coastal ecosystems, integrating social sciences and physical sciences to address complex environmental challenges. Through a combination of coursework and applied research, the program equips students with the knowledge and skills needed to manage natural resources sustainably in the context of climate change, biodiversity conservation, and development.

The NRM program also emphasizes capacity building, professional training, and outreach, offering students opportunities to engage with real-world projects and regional partnerships. With a strong track record of collaboration with universities and institutions across tropical Asia and beyond, NRM contributes to strengthening academic programs and advancing sustainable natural resource management at local, regional, and global levels.

Areas of Specialization

- Ecology
- Land Resource Management
- Economics and Policy
- Forestry
- Nature-based Solutions

Focus Areas

- Forestry
- Forest carbon accounting
- REDD+
- Biodiversity Conservation
- Ecosystem Services
- Valuation of ecosystem services
- Land resource management
- Land degradation neutrality
- NRM economics and policy
- Nature-based solutions (NbS) to climate change
- Community-based NRM
- Application of modern technologies for NRM
- Assessment of natural resources using conventional and modern geospatial techniques.

Preferred Background

- Master Program- Undergraduate degree in any field of study
- Ph.D ProgramMaster degree in any field of study with good GPAUndergraduate degree in any field of study from a reputed university – International experience and English proficiency

Course Structure

Master of Science (2 years) in Natural Resources Management August 2025 intake

Professional Master in Banking and Finance

Program Overview

PMBF helps emerging industry leaders cultivate a strategic mindset to meet current and emerging challenges arising from the fast-changing business and technological environment in the banking and finance industry. The program will help participants acquire knowledge and tools to decode and respond strategically to significant changes in the economic and social environment, analyze and design new business models to gain a competitive edge, identify emerging revenue streams analyzing the role of partnerships in value creation for customers anticipate and respond to evolving regulations and exploit the potential of technology to enhance the competitiveness of business.

Courses Offered

Required courses: Macro Economics, Financial Management, Strategy & Leadership, International Finance, Banking, Financial Regulation & Supervision, Risk Management, Capstone project.

Elective courses: Opportunities and Challenges, Digital Transformation: Making it work in banks, Introduction to Business Analytics.

Eligibility

To be eligible for admission to the regular Masters program, an applicant must:

- Hold a bachelor's degree (normally from a four-year program), or its equivalent, in an appropriate field of study from an institution of good standing acceptable to AIT;
- Have undergraduate grades significantly above average.
- The minimum GPA requirement for admission to the Masters Program is 2.75 or equivalent, at the Bachelor degree level;
- English Proficiency Requirement: AIT-EET:6 or IELTS- Academic:6 (writing 6) or TOEFL Paper: 550 (writing 59-61) or TOEFL CBT: 213 (writing 25-26): TOEFL IBT: 80 (writing 21-23);
- For the PM degree program, in addition to the above-mentioned eligibility requirements, an applicant must: have at least 3 years of work experience in areas related to the academic program at AIT and be executives in organizations/companies.
- Be in satisfactory physical and mental health.
- Satisfy English requirements by AIT.

Delivery Mode

The program is delivered using a combination of methods such as interactive self-learning, live classroom, face-to-face classroom in AIT campus. Each course (except the integrative module) will be delivered over 3 to 4 weeks. The program will attempt to provide options for participants to attend all or part of the integrative module on campus, considering the participants' work schedules.

[Apply Now](#)

For more information som_pm@ait.ac.th

Professional Master in Data Science (PMDS)

The program is designed for working professionals with a background in ICT who would like to extend their skill set to encompass data science and become qualified experts in the principles and practices of data science.

Program Brochure [Download](#)

Background and Rationale

Data science is concerned with the extraction of useful knowledge from data sets. It is closely related to the fields of computer science, mathematics, and statistics. It is a relatively new term for a broad set of skills spanning the more established fields of machine learning, data mining, databases, and visualization, along with their applications in various fields. In 2012, Harvard Business Review called data science “The Sexiest Job of the 21st Century.”

Eligibility

The common core is designed so that any graduate of a 4-year Bachelor of Science or Bachelor of Engineering program can succeed in the program.

The mathematical background for the common core is undergraduate linear algebra and multivariate calculus (matrices, vectors, and partial derivatives) and basic probability theory (probability mass functions, probability density functions, sampling, and common distributions). The Mathematical Foundations of Data Science course provides a review of this background material and reinforcement of the particular mathematical techniques used in data science.

The assumed IT background is basic IT literacy and the ability to write basic programs in any high-level programming language. Applicants with no or very little programming experience should take an online course in Python programming, for example on Coursera, before beginning the PMDS.

Applicants with related work experience are preferable. In addition, applicants should be employed with a company or other organization that can utilize the skills obtained from the program. We expect students to apply the skills learned in PMDS to a problem faced by the company or organization in their industrial project.

Applicants should have a good command of English with an English proficiency score in the IELTS academic writing band of at least 5.0.

Semester	Period	Course
First semester	August-Mid December 2021	Core and elective courses
Second semester	January-Mid May 2022	Core and elective course
Third semester	June-July 2022	Individual project with industry

Course

1st Semester (August–November)	Computer Programming for Data Science	Required	3
1st Semester (August–November)	Data Modeling and Data Management	Required	3
1st Semester (August–November)	Fundamentals of Machine Learning	Required	3
1st Semester (August–November)	Mathematical for Data Science	Required	3
2nd Semester (January–Mid May)	Data Analytics for Business Intelligence	Required	3
2nd Semester (January–Mid May)	Data Driven Computer Vision	Required	3
2nd Semester (January–Mid May)	Deep Learning	Required	3
2nd Semester (January–Mid May)	Human-Computer Interaction	Required	3
3rd Semester (June–July)	Industrial Project	Required	6

PM in ESG Management | AIT School of Management

URL: <https://som.ait.ac.th/pm-esg>

WHY PM-ESG Management?

- The business world faces a major transformation.

Consumers, employees, governments, and regulators all expect companies to show that they act ethically and respect people and the planet in their pursuit of profit. Business investments that prioritize social innovation, equity, and practical action have reached 700 billion US dollars, in 2021, in step with a surge in regulatory incentives. Environmental, social, and governance (ESG) standards are key differentiators.

- The search is on for ESG professionals with understanding and skills.

More and more ESG professionals are needed to steer corporate decision-making towards responsible profits. ESG management is emerging as a portfolio practical approach to Corporate Social Responsibility (CSR) values, and Sustainability principles, viewed from a Risk Management Perspective.

- More ESG professionals are needed than are available.

500,000 new ESG jobs are expected this decade. From entry-level data and compliance documentation to responding to process-level challenges confronting business growth for managing risk in the boardroom.

- PM-ESG prepares professionals for in-demand ESG roles.

ESG careers are opening in risk management, strategic planning, policy analysis, social impact, and business innovation. PM-ESG is offered by the AIT School of Management in collaboration with the Yunus Centre, AIT's ESG hub. Students earn a master's qualification without having to interrupt their careers. PM-ESG is attractive for employees because they can invest in building the ESG capacity of key management and staff, without having to displace employees

PROGRAM

PM-ESG Management is a 30-credit program that full-time students can complete in one academic year. To graduate, students complete eight 3-credit course modules and a 6-credit practicum and final project. Module topics are chosen for relevance to emerging ESG trends, strategic value for employers, and practical applicability to real-life challenges. Modules are available as in-house corporate workshops.

PM-ESG Management attracts working professionals from multinational retail, manufacturing, and extractive industries, international and national NGOs, the UN system, consulting firms, and grassroots development organizations.

PM-ESG Management flexible weekend format remains popular. PM-ESG capitalizes on AIT's hybrid multi-modal teaching model that combines online and in-class instruction with extensive practical exposure. With over 40 nationalities represented on campus, AIT offers an unmatched international learning environment.

PM-ESG Management is a transportable ESG qualification against which employers can standardize the recruitment of ESG professionals. An AIT degree is a recognized asset within the region and beyond. Compared to peer offerings, PM-ESG scores high for competitiveness, value-for-money, ease of access, and internationality.

CURRICULUM

PM-ESG Management curriculum is built on the foundations of risk management, organizational sustainability, innovation leadership, and social impact, augmented by direct practical exposure and case-based peer learning facilitated by experienced practitioners drawn from AIT alumni and the Yunus Academia Network worldwide.

PM-ESG Management is taught by teaching teams comprising academic faculty and industry executives. All 8-course modules are compulsory, carrying 30 hours of contact time, each. The 6-credit Practicum culminates in the Final Project, in which students design an implementable ESG solution for their company or institution.

ENTRY REQUIREMENTS

- Evidence of English language proficiency, which includes the AIT English Language Test (online) or IELTS at 6.0 or above. Further details of AIT's language requirements can be found at: <https://www.ait.ac.th/admissions/eligibility/>
- Bachelor's degree with CGPA above 2.75, and a minimum of 3 years of appropriate work experience.

- Candidates without Bachelor's degree may be considered if they demonstrate 10+ years of work experience.

FEE & CHARGES

Tuition & Registration (inclusive)*

- Full PM-ESG as a regular program: USD 16,500, payable in 1, 3, or 5 installments
- Each module can be taken as a professional workshop: USD 1,800, payable upon registration
- Practicum-only option: USD 3,600, payable upon registration

*Payable in Thai Baht, exchange rates may vary

Competitive Tuition Scholarships for eligible applicants, organizational nominees, and groups.

Professional Master in Geotechnical Engineering and Management (PME-GEM)

Geotechnical Engineering and Management (PME-GEM) and Geosystem Exploration and Petroleum Geoengineering (PME-GEPP)

Program Overview

The Professional Master of Engineering in Geotechnical Engineering and Management (GEM) started in the early of 2000s to develop strong, reflective, and responsive engineering professionals who can confidently adapt to the challenges and opportunities of this rapidly changing world. These programs are offered outside the Bangkok campus and tailored to accommodate working professionals seeking to advance their careers while continuing their jobs.

These programs offer various specializations, including Geotechnical Engineering and Management (GEM) and Geosystem Exploration and Petroleum Geoengineering (GEPP). These specializations cover a wide range of essential topics, including site investigation, soil characterization, soil improvement techniques, tunneling in soft ground, foundation design, computational geotechnics, and the mitigation of geo hazards, mineral resources, petroleum exploration, and production, nearshore reclamation among other critical subjects.

Program Overview

PME-GEM: Practical Soil Engineering, Foundation Engineering and Design, Engineering Geology, Instrumentation and Advanced Soil Testing, Ground improvement & Geosynthetic's, Underground Excavation and Tunneling, Geotechnical Investigation & Exploration, Risk Management for Infrastructure Development and Planning, Challenges in Applying Engineering Principles in Practice.

PME-GEPP: Fundamentals of Geosystem Exploration, Petroleum Reservoir Engineering, Drilling and Well Completion Operation, Devision Analysis and Risk Management in Oil and Gas Industry, Workflow of Oil Gas Operations in E&P, Exploration Geophysics, Petrophysics, Petroleum Production Engineering, Petroleum Geochemistry.

Eligibility

To be eligible for admission to the regular Masters program, an applicant must:

- Hold a bachelor’s degree (normally from a four-year program), or its equivalent, in an appropriate field of study from an institution of good standing acceptable to AIT;
- Have undergraduate grades significantly above average.
- The minimum GPA requirement for admission to the Masters Program is 2.75 or equivalent, at the Bachelor degree level;
- English Proficiency Requirement: AIT-EET:6 or IELTS- Academic:6 (writing 6) or TOEFL Paper: 550 (writing 59-61) or TOEFL CBT: 213 (writing 25-26): TOEFL IBT: 80 (writing 21-23);
- For the PM degree program, in addition to the above-mentioned eligibility requirements, an applicant must: have at least 3 years of work experience in areas related to the academic program at AIT and be executives in organizations/companies.
- Be in satisfactory physical and mental health.
- Satisfy English requirements by AIT.

Delivery Mode and Other Features

The program will be delivered onsite in the AIT Vietnam campus during 1 year of full time studying, and in every weekday evening from 18:00-21:00, and Saturday from 9:00 – 12:00 & 13:30 – 16:30. Hybrid mode is available for those who are not able to join on-site.

Students will need to complete a 33-credit curriculum, consisting of 24 credits of course work and 9 credits of internship in one year period. Teaching is conducted in English.

Professional Master in Project Management (MPM)

Professional Master in Project Management(with specialization in Construction projects)

The aim of this MPM program is to provide applied and advanced project management knowledge to professionals working in large-scale construction projects. The program is designed for one year to study period. Selected students are construction industry professionals with at least 3 years of experience.

Program Brochure [Download](#)

Preferred Background

- Master Program

Undergraduate degrees in Civil Engineering, Mechanical Engineering, Electrical Engineering, Construction Engineering, Architecture, Quantity Surveying, Landscape Design, Interior Design, Business Studies, and other bachelor’s degrees related to construction projects.

Degrees in other fields of engineering, urban and regional planning, architecture, quantity surveying, etc., are also considered

- Doctoral Program

Master’s degree in Construction Engineering and Management, Infrastructure Management, or in any other field of civil engineering. Candidates with significant research or professional experience are highly preferred.

Professional Master in Structural Design of Tall Buildings (PMTB)

PMTB is a flexible learning approach combining online and in-class aspects of learning. The program is designed keeping in view the recent dominance of tall building projects and the need for engineers to be equipped with better tools and skill sets to design safer structures. The focus of the program includes advanced knowledge of state-of-the-art methodologies, techniques, and tools that can be applied in the structural design of tall buildings. Developing your design and leadership skills to formulate innovative systems and solutions, on-the-job learning wherein the student can benefit from experiential learning by doing a variety of assignments, aligned with the student's existing professional commitments.

The program is directed towards practicing engineers with a minimum of three years of relevant experience. It will also provide an opportunity to do project work at leading structural engineering/infrastructure companies in South East Asia as well as in-class sessions conducted by professionals from leading structural engineering companies.

PMTB is offered by the Civil and Infrastructure Engineering (CIE) Department, School of Engineering and Technology. The online course content will be delivered through the e-learning platform in the form of video, audio, image, slides, apps, and links. Further teaching support will also be provided through video conferencing, instant messaging, email, and file sharing. The in-class component of the program will provide the student with a one-on-one interaction platform with faculty as well as industry experts. The in-class sessions will also include seminars on special topics to be delivered by invited experts, lab visits, and examinations.

Professional Master's Programme in Data Science and AI Applications (AIT-UNITAR PMDS)

A Joint Collaboration between Asian Institute of Technology (AIT) & United Nations Institute for Training and Research (UNITAR)

About the Program

- An internationally accredited Professional Master's degree from AIT, in collaboration with UNITAR.
- Designed to equip students with advanced knowledge and skills in data science and AI applications.
- Offers a unique blend of theoretical foundations and practical applications, preparing graduates to tackle complex global challenges using data-driven solutions.
- Adopts a hybrid mode of instruction, combining physical class sessions at the AIT campus in Thailand with online sessions.

Program Structure

Official Degree Title: Master of Science (Professional) in Data Science and Artificial Intelligence Applications

Total Credits: 30 credits

Duration: 12 months (minimum)

Curriculum Structure

Technical Required Courses (12 credits):

- Computer Programming for Data Science
- Data Modeling and Data Management
- Fundamentals of Machine Learning
- Data Analytics for Business Intelligence

Selected Topics / Elective Courses on Technology Ethics and Governance (12 credits):

- Data Privacy, Security, and Governance
- Selected Topic: AI Regulation and Governance
- Selected Topic: Techplomacy, Ethics, And Conflicts in Artificial Intelligence
- Selected Topic: Strategic Cybersecurity Governance

Master's Project (6 credits)

Eligibility Requirements:

- Hold a Bachelor's degree (normally from a four-year program), or its equivalent from an accredited institution in relevant areas with a minimum cumulative grade point average of 2.75 (4.0 scale);
- English Proficiency Requirement: AIT-EET: 6; IELTS Academic: overall 6 (writing 6); TOEFL iBT: overall 80 (writing 21-23); PTE Academic: overall 52 (writing 62-73);
- Minimum of 3 years of work experience in relevant areas.

Program Schedule 2025-2026

Semester 1: January-May

Inter-semester: June-July

Semester 2: August-December

Remote Sensing and Geographic Information Systems (RS-GIS)

Introduction / Background

The Remote Sensing and Geographic Information Systems (RSGIS) program provides advanced education in the collection, processing, analysis, and application of geospatial data. The program emphasizes the use of satellite, airborne, and ground-based observation technologies, together with GIS and spatial analysis methods, to support sound, evidence-based analysis and informed decision-making.

Recent advances in Earth observation technologies have significantly increased the availability, resolution, and diversity of spatial data. Contemporary geospatial practice therefore, places strong emphasis on analytical capability and methodological rigor, enabling the integration of multi-source datasets and the extraction of meaningful information from large volumes of spatial data. The RSGIS program addresses these requirements through rigorous coursework and applied geospatial analysis.

RSGIS is inherently multidisciplinary, drawing on principles from geography, engineering, computer science, environmental science, and applied mathematics. The program integrates core geospatial technologies with computational methods and emerging approaches, including machine learning and cloud-based geospatial platforms, ensuring relevance to current professional practice and adaptability to future developments.

The RSGIS program develops graduates with strong foundations in Remote Sensing, GIS, GNSS, and spatial analysis, supported by advanced coursework and research-oriented learning. Graduates are prepared to work effectively with contemporary geospatial systems and analytical environments, and to apply geospatial information in professional, research, and policy-related contexts. Career opportunities span government agencies, industry, research institutions, and international organizations where geospatial information plays an essential role.

Focus Areas

- Advanced Geographic Information Systems (GIS) and Spatial Analysis
- Remote Sensing and Earth Observation Technologies
- Geospatial Transformation and Digital Surveying Technologies
- Microwave Remote Sensing and InSAR Applications
- Geospatial Data Analytics and Geo-Predictive Modeling
- Machine Learning and Deep Learning for Geospatial Applications
- Big Spatial Data and Time-Series Analysis
- Web-based GIS and Location-Based Services (LBS)
- 3D GIS, City Models, and Digital Twins
- Environmental and Climate-Focused Geospatial Applications
- Disaster Risk Assessment and Geospatial Decision Support
- Health GIS and Spatial Epidemiology

Preferred Background

Master's Program

The RSGIS program welcomes applicants from engineering, science, and related disciplines. Typical backgrounds include information and computer sciences; engineering and built-environment fields (such as engineering, architecture, and urban or regional planning); earth, environmental, and natural resource disciplines (including oceanography, agriculture, forestry, and fisheries); as well as social science disciplines, provided applicants have relevant professional experience in geospatial or spatially related fields.

Doctoral Program

Applicants should hold a relevant master's degree in Remote Sensing and GIS or a closely related field aligned with the intended research area.

Sustainable Energy Transition (SET)

Introduction / Background

This interdisciplinary program encompasses clean energy transition technologies, policy, environmental, social and management aspects. Graduates from this program will be able to address the challenges of energy transition, especially in the areas of low carbon electricity supply systems, reduction of energy intensity, and providing energy access to all physical and geographical areas.

The main goal of this program is to prepare students to face the impending challenges in the global energy sector through strategic state of the art knowledge, tools and research skills to support technology, market, business, finance and policy development. This is expected to prepare them to deliver solutions-oriented knowledge and innovative practices for cleaner energy transitions for human progress.

Areas of Specialization

- Sustainable Energy Transition
- Electric Power System Management

Focus Areas

- Improving Energy Access
- Climate Change Mitigation
- Renewable Energy Technology, Diffusion and Integration to Energy System
- Green Hydrogen Production and Fuel Cell Technology
- Smart Grid and Microgrid
- Application of IoT, Big Data, and Blockchain Technology in Energy Systems
- Electric and Hybrid Electric Vehicles Technology Diffusion
- Energy Efficiency in Buildings and Industry
- Battery and other Energy Storage Technology
- Energy Policy and Demand Analysis
- Energy Market Regulation
- Cross-border Electricity Trade
- Carbon Market and Finance
- Climate Change Adaptation in Power and Energy Infrastructure
- Decarbonization of Power, Transport and Energy Sector

Preferred Background

Degrees from an institution of recognized standing, preferably in engineering, management, economics, social sciences, and other related fields. Our curriculum is intended not only for fresh graduates but also for professionals from energy utilities (including power utilities), municipalities, regulators, energy ministries/authorities, private companies, consulting companies, academia, NGOs, city and municipal authorities dealing with or interested in the sustainable energy transition.

Course Structure

3.5-year Doctoral degree program:

- Option-1: 12 credits elective courses + 72 credits dissertation research
- Option-2: 9 credit elective courses + 3 credit special study + 72 credit dissertation research

Two-year master program:

- Thesis option: 6 credits required courses + 20 credits elective courses + 22 credits Thesis
- Research study option/ Internship option: 6 credits required courses + 27-30 credits elective courses with maximum 1-3 credit special study + 12 credits Research study/12 credits Internship
- Minor option from other academic program: 6 credits required courses + 18 credits elective courses+ 12 credits course from other academic program + 12 credits Research study
- Minor option in SET: 12 credit courses from SET program(6 credit required + 6 elective courses)
- Exchange option: 24 credits courses at AIT+ 12 credits of courses at partner universities + 12 credit research at AIT

One-year Master program:

- Only courses option: 6 credits required courses + 24 credits elective courses
- Project option: 6 credits required courses + 18-21 credits elective courses + 3-6 credit project/special study

One-year Diploma:6 credits required courses + 18 credits elective courses

Course Title	Credits (Lecture hrs. – Lab hrs.)	Type	Semester Offered
Energy Technology, Transition and Sustainability	3(45-0)	Required	August
Energy Systems, Economics and Policy	3(45-0)	Required	January
Smart Energy Buildings	3(30-45)	Elective	August
Green Hydrogen, Fuel Cell, and Energy Storage Technology	3(30-45)	Elective	August
Economics of Clean Energy Transition	3(45-0)	Elective	January
Power System Modeling and Analysis	3(30-45)	Elective	August
Microgrid Design, Control and Applications	3(30-45)	Elective	January
Design and Operation of the Transmission and Distribution Systems	3(30-45)	Elective	August
Carbon Pricing, Market and Climate Finance	3(45-0)	Elective	August

Telecommunications (TC)

The Telecommunications program offers areas of specialization in transmission systems; switching systems; telematics; network planning, and in collaboration with the School of Management, telecommunications management.

The courses offered to emphasize modern telecommunications skills in systems planning and engineering, telecommunications software development, and administrative and financial aspects of telecommunications management.

Graduates from the master’s program form the nucleus for effective high-level technical planning and management operations at their employer organizations. Some of the graduates are engaged in planning, development, and service activities leading to the installation, commissioning, management, design, etc. of value-added systems. Given the important role of our graduates in the development of the telecommunications sector, the learning is of significant benefit to the users of telecommunications services within the region.

Graduates of the doctoral program play key roles in enhancing the level of education and research in the national universities of the region and promoting and strengthening the R&D potential of emerging regional manufacturing industries.

The research covers a wide variety of topics at the cutting edge of research and development. Specific issues addressed in the broad fields of transmission and switching systems are, for example, coherent optical communications, multiple-access strategies for cellular-mobile and cabled networks, as well as questions of congestion control and new services in ISDN and future B-ISDN networks.

Program Brochure [Download](#)

ResearchFocus Area

- Transmission systems
- Telematics
- Network planning
- Coherent optical communications
- Multiple-access strategies
- Cellular-mobile and cabled networks
- Congestion control

Preferred Background

- Master Program

Undergraduate study for candidates seeking admission to the field of Telecommunications are in communications, telecommunications, electrical engineering, electronics, and computer science or computer engineering. With the last two, a strong background in communications or telecommunications is expected.

- Doctoral Program

A good master’s degree in Telecommunications or a closely related field is a prerequisite.

Course Structure

Course ID	Course Title	Credit	Semester	Remark
AT77.01	Telecommunication Networks	3(3-0)	August	Required
AT77.02	Signals and Systems	3(2-3)	August	Required

Transportation Engineering (TRE)

Area of Specialization under the Civil and Infrastructure Engineering (CIE) program

Industrialization and population growth have tremendous impacts on the movement of people and goods. Every day, movement is hampered by congestion, insufficiency of public transport facilities, traffic accidents, and other conditions. Moreover, as manufacturing expands globally, businesses want to reduce transportation costs by limiting the number of distribution nodes. Concerns over congestion on highways, increasing pollution and hazardous materials all emphasize the need to effectively maximize transportation systems. Thus, the issue of transportation is obviously crucial, not only now but in the future.

The Transportation Engineering field exposes students to the process of alleviating transportation problems. The coursework and research in the area provide advanced knowledge in transportation planning and economics, traffic engineering, and the design of highways/pavements and other transportation facilities. Transportation Engineering students acquire advanced skills concerning the planning, design, operations, maintenance, rehabilitation, performance, and evaluation of transportation systems, including their economic and public policy aspects.

The field imbues in each student the development of analytic, problem-solving, design, and management skills suitable for public and private sector professional work.

Program Brochure [Download](#)

Areas of Specialization

TRE offers two areas of specialization, (a) Planning and Engineering and (b) Highways and Pavements.

Depending upon individual choice and interests, students may freely select courses such that they receive training either inPlanning & EngineeringorHighways & Pavements. UnderPlanning & Engineering, students are trained on planning and logistics as well as traffic and safety. Among other topics, they are immersed in issues relating to transportation systems, urban/regional transportation analysis and planning methods, airport planning & design, and traffic engineering.

Students gearing for specialization inHighways & Pavementstake courses in design and operation as well as in management systems and maintenance. They are skilled in geometric design and highway safety, design/performance of highways and airport pavement as well as pavement management systems.

Current research in Transportation Engineering covers transportation planning and economics, traffic engineering, traffic safety, and the design of highways and pavements.

Preferred Background

- Master Program

Undergraduate degrees in Civil Engineering; other engineering fields (e.g. urban and regional planning and systems engineering) are also considered

- Doctoral Program

Master’s degree in Transportation Engineering and other related engineering fields

TRE field gives students an opportunity to explore the technological, safety, political/economic, and energy/environment dimensions of Transportation Engineering. In enhancing a holistic approach, they undertake courses such as Urban/Regional Transportation Analysis and Planning Methods, Airport Planning & Design, Design and Performance of Highway and Airport Pavement, Transportation Policy and Environmental Limits, and Planning for Traffic Safety and Injury Prevention. Coursework in other fields broadens students’ knowledge. Highly recommended are engineering mathematics, fundamentals of soil engineering, geographic information systems in civil engineering, and construction planning and scheduling.

In offering opportunity and choice, students can design their own study programs according to their inclinations and future career objectives. In addition to the courses specified below, students, under the guidance of their academic advisors, can select courses from a wide range of electives from other fields/schools as part of an approved study plan.

Course Structure

January	Semester	Choice	Credits
CE73.17	Airport Planning and Design	Elective	3(3-0)
CE73.22	Planning for Traffic Safety and Injury Prevention	Elective	3(3-0)
CE73.24	Intelligent Transportation Systems	Elective	3(3-0)
CE73.32	Design and Performance of Highway and Airport Pavement	Elective	3(3-0)
CE73.33	Pavement Management Systems	Elective	3(3-0)
CE73.38	Transportation Logistics	Elective	3(3-0)
CE73.39	Traffic Engineering	Elective	3(3-0)
CE73.40	Advanced Geometric Design and Highway Safety	Elective	3(3-0)
CE73.9005	Selected Topic: Logistics Systems	Elective	2(2-0)
CE73.9006	Selected Topic: Rail System Administration and Management	Electiveec	3(3-0)

Water Engineering and Management (WEM)

Introduction / Background

The availability, management, and sustainable use of water resources have become a defining challenge of this century. Water is now at the center of global debates on climate resilience, food and energy security, sustainable cities, disaster risk reduction, and environmental protection. Yet, many regions, particularly developing nations, continue to struggle with floods, droughts, pollution, and competing sectoral demands. These challenges are further amplified in Asia, the world's most populous and climate-vulnerable region, where effective water management will directly determine economic growth, human well-being, and ecological integrity.

The Water Engineering and Management (WEM) program at AIT aims to address these contemporary challenges in water resources and its sustainable development and management. WEM program integrates the engineering, management, and policy dimensions of water and provides students with a unique blend of knowledge and skills on fundamentals of water resources such as hydrology, hydraulics, irrigation and drainage, hydro-informatics and modeling, while embedding the essence of climate change adaptation, risk management, water governance, and socioeconomic consideration. The program equips students with technical knowledge and management strategies to manage water resources sustainably across scales, from local watersheds to international river basins.

While candidates with an undergraduate degree in engineering (B. Eng.) will enroll in the Master of Engineering (M. Eng.), those from non-engineering backgrounds will enroll in the Master of Science (M. Sc.). In addition, students have the flexibility to pursue their Master's degree through a range of pathways depending on their academic interests and career goals. These include combinations of coursework, research, internships, and exchange opportunities, allowing students to tailor their learning experience to meet both academic and professional development needs. At the doctoral level, the program offers both the Doctor of Philosophy (Ph.D.) and the Doctor of Engineering (D. Eng.).

Under the new thematic structure, the WEM is explicitly aligned with AIT's strategic direction. WEM addresses sustainability by linking water management to climate resilience, the food-energy-water nexus, and ecosystem services. It contributes to innovation and digital transformation through hydro-informatics, big data analytics, remote sensing, and Artificial Intelligence for water management. WEM prepares students not only for government and academic roles but also for leadership in consultancy, private sector innovation, and start-ups. It promotes collaboration across civil engineering, environmental sciences, economics, and policy to provide holistic solutions. This program directly addresses the global agenda on sustainable development, particularly in relation to SDG2: Zero Hunger, SDG6: Clean Water and Sanitation, SDG7: Affordable and Clean Energy, SDG11: Sustainable Cities and Communities, and SDG13: Climate Action, as well as SDG17: Global Partnership for Sustainable Development.

The program reaffirms its commitment to producing a new generation of water professionals who can address the complex, multi-scalar, and contemporary challenges in water resources and their management.

Focus Areas

- Agricultural water
- Coastal water
- Urban water
- Water resources
- Extreme events and risk management

Preferred Background

Master Program: Undergraduate degrees in Civil or Agricultural Engineering; other relevant engineering fields and applied sciences are considered on a case-to-case basis

Doctoral Program :Master's degree in fields related to Water Engineering and Management

Course Structure

Master's Program

A master's program requires 48 credits with two options:Option 1: A minimum of 26 credits of coursework and 22 credits of thesisOption 2: A minimum of 36 credits of coursework and 12 credits of research study

Students can obtain a master's degree in environmental engineering and management by completing a 48 credits curriculum work while achieving a final cumulative grade point average of not less than 2.75.

Doctoral Program

The Doctoral program requires a minimum of 84 credits that comprise a minimum of 12 credits of coursework at AIT, which may include 3-credits of special study. This minimum credit requirement must be completed before the student is advanced to candidacy. The dissertation is worth 72 credits for the regular doctoral program.

Open Master of Engineering/Science in Interdisciplinary Studies (OMIS)

What is the new AIT OPEN MASTER?

The new AIT OPEN MASTER OF ENGINEERING/SCIENCE IN INTERDISCIPLINARY STUDIES (OMIS) is a truly “Multidisciplinary approach” spanning all existing programs at AIT. It is designed for students with a clearly articulated research plan of multidisciplinary nature. We seek students who have unique educational objectives and want to pursue a multidisciplinary study spanning over different fields.

The OMIS program encourages interdisciplinary thinking, courses and research that involves more than one of the AIT Focus Areas, and thus, offers students an academic freedom to define their unique study and research plans that best match their interests and goals.’

Prospective students need to submit a research proposal which indicated their research interest and if admitted they will work with their supervisor and co-supervisor from different programs/research areas to develop their full study and research plans. Students can choose any course from different departments/schools to fulfill their unique multidisciplinary research goals. For the course work, there will be almost no restrictions other than a limit of courses from the same Department.

The motto of the AIT OPEN MASTER is “Design Your Own Curriculum Design Your Future”.

Students must submit a ‘tentative’ Master’s study and research plan. This plan shall include a “Research Plan” outlaying the intended interdisciplinary research and a “Study Plan” proposing the courses to lay the base for the proposed research plan. Students can design a study plan melting business courses from SOM with engineering courses from SET and sustainable technology courses from SERD. The OMIS program also encourages translational research and entrepreneurship to support AITs goal on “Social Impact with Innovation”.

What Degree will I get?

Depending on your bachelor’s degree, you will either get a Master of Engineering or a Master of Science, the full name on your degree will be “Open Master of Engineering/Science in Interdisciplinary Studies”. In addition, your field of research will be added in brackets after the degree name. For example, your bachelor was in Electronics Engineering and your research was to control a robot by your brainwaves it could be “Open Master of Engineering in Interdisciplinary Studies (Human Machine Interfaces)”.

What Degree Options are Available?

The program is offered as our traditional 2-year On-Campus option (The Flexible Master’s Option is only available on a case-by-case basis in consolidation with the supervisor).

Can I get a Scholarship?

Yes, all our regular scholarships are applicable to the new OMIS program. However, scholarships are given out on a competitive basis and there is no guarantee to receive them.

After your application AIT will select the best matching scholarship for you automatically. You do not need to apply for a scholarship from AIT.

Alternative, you may apply for a scholarship from your government or other organization. If you intend to do so, please contact us at the email provided below if you need supporting documents from AIT.

What are the Advantages?

The Open Master gives you the flexibility and academic freedom you need!

- Choose from all courses offered by AIT.
- Create your unique own curriculum.
- Blend engineering with business and sustainability with courses from all 3 schools.
- Combine your research interest and study with an internship or exchange.
- Stay out of the crowd with your unique curriculum and research.

What are the Details of the Curriculum?

With the program's emphasis on multidisciplinary research, the following program structure is allowed:

- 24-credit coursework + 24-credit thesis
- 24-credit coursework + 12-credit internship or exchange + 12-credit research study
- 36-credits coursework + 12 credits research study

Admitted students will design their individualized study program with their supervisors and co-supervisors. The study plan can be tailored for each student to best suit his/her interests and to fulfill the multidisciplinary research goal. Hence, with the supervisor recommendations and approvals, students can select any relevant courses from any programs/schools within AIT.

Certain requirements to design the study program shall be applied, such are:

Program Rules:

- For 24 credits coursework: Students shall take courses from at least 2 Departments (maximum 12 credits per Department)
- For 36 credits coursework: Students shall take courses from at least 2 Departments (maximum 18 credits per Department)
- Students shall take courses from at least 3 programs
- The study plan must support and match the research plan

Program Guidelines:

- It is encouraged to take courses from more than 3 programs.
- It is encouraged to take courses from all 3 schools.
- It is encouraged to engage in translational and/or entrepreneurial work

What is the Cost?

The OPEN MASTER has the same cost as our other programs. [View Expenses](#)

What Research and Study Plan must I Submit for the Application?

You must submit a Research Plan that outlines your intended research interest. The Research Plan shall include at least: Title, Research Field, Hypothesis to proof/disproof, Research Methodology, Facilities Needed, Impact Statement, References. The impact statement shall also include if your research can be translated and how your research and its potential translation will support AITs goal on "Social Impact with Innovation". The length shall be 2-4 pages.

After definition of your research plan you can design your Study Plan and select courses to support your research. You may submit a table with courses and a justification on how the selected course will help you in your future research. The length shall be 2 to 3 pages.

What Type of Research and Courses are Available at AIT for the Open Master?

AIT offer a wide range of research and study opportunities and there is hardly any limit. However, you may consider choosing interdisciplinary research within AITs Focus Research Areas listed here:

- Climate Change
- Food-Energy-Water

- Infrastructure
- Smart Communities
- Technology, Policy and Development

The courses are available on the three School webpages of SET, SERD and SOM with the links provided here: [Click Here](#)

I do not know what I want to Study; shall I Choose the Open Master?

No, you should not! The OPEN MASTER is for students with a very clear Research and Study Plan and strong desire to study and research a well-defined interdisciplinary topic.

How to Apply?

To apply, go to the AIT online application form by [Clicking Here](#) and choose "Open Master of Engineering/Science in Interdisciplinary Studies". You also need to submit a Study Plan and a Research Plan in addition to the other required documents.

Deadline

The application deadline is like our other programs. [Check Deadline](#)

Payment

The payment follows the same process as for other programs. All details to make payments are at this website, [Click here](#).

Unified Degree Programs

The Bachelor's Degree will be awarded by Partner University while the Master's Degree will be awarded by AIT. This accelerated program links AIT to partner universities, allowing students to earn a Bachelor's degree and a Master's degree in minimum of 5 years!

Details about the Unified Programs are available at this link <https://sdp.ait.ac.th/unifiedmasters>

AIT has partnered with universities/institutions from different countries and developed the Unified Bachelor-Masters Program. Partner universities include:

Bangladesh

- University of Liberal Arts Bangladesh

China

- Beijing Institute of Technology (BIT)
- Shanghai Ocean University (SHOU)

Czech Republic

- University of West Bohemia (ZCU)

India

- Presidency University, Bengaluru
- Jawaharlal Nehru Technological University Kakinada (JNTUK), Andhra Pradesh
- Jawaharlal Nehru Technological University Hyderabad (JNTUH), Telangana
- National Institute of Technology Warangal (NITW), Andhra Pradesh
- K L University (KLU), Andhra Pradesh

Nepal

- Kathmandu University (KU)

Vietnam

- Van Lang University (VLU)
- National Economics University (NEU)
- Nguyen Tat Thanh University (NTTU)

Thailand

- Chulalongkorn School of Integrated Innovation (CSII), Chulalongkorn University
- King Mongkut's Institute of Technology Ladkrabang (KMITL)
- Siam University (SU)
- College of Industrial Technology – King Mongkut's University of Technology North Bangkok (CIT-KMUTNB)
- Chiang Mai University (CMU)

Joint Degree Programs

Asian Institute of Technology (AIT) in Thailand and IHE Delft Institute for Water Education in the Netherlands, have been jointly offering a Joint Degree Master's program on Urban Water Engineering and Management (UWEM) since 2009. The program gives an excellent opportunity to gain knowledge and experience from both Asia and Europe environment.

Application Procedure

For IHE Delft Institute for Water Education, The Netherlands: WebsiteLink (<https://www.un-ihe.org/msc-programmes/specialization/urban-water-engineering-and-management-0/>)

For AIT, Bangkok, Thailand: Apply online through AIT Admissions WebsiteLink (<https://admission.ait.ac.th/aoas/Applicant/FirstPage.aspx>)

Please mention clearly that you are applying for the joint degree program in Urban Water Engineering and Management (UWEM).

Costs and Expenses

The fee structure of this joint degree program is different from the regular AIT Degree program.

Please Click [here](#) for Fees and Expenses under this joint degree program.

Academic Funding

- Application for Admissions with Available Funding

For applicants with prospective funding from their employers or other sources, the application procedures above should be followed. Applications will be accepted until 31 May. If an applicant requires an admission offer from AIT to seek financial support from external sources, please apply as soon as possible.

- Prof C. Visvanathan (visu@ait.ac.th); or
- Prof Mukand S. Babel (msbabel@ait.ac.th)
- Dr. Tenzin Rabgyal (tenzin@ait.asia) of AIT or
- Ms. Ineke Melis (i.melis@un-ihe.org) of IHE Delft Institute for Water Education
- UN-IHE Website <http://www.un-ihe.org/>
- AIT Admissions <https://admission.ait.ac.th/aoas/Applicant/FirstPage.aspx>

Flexible PhD Option

Flexible PhD Option

The “Flexible PhD Option” is a new alternative to our traditional “On-campus PhD Option” to conduct PhD studies at AIT. It is applicable to selected programs at 3 Schools. Students will receive the same degree and the same academic requirements apply as the program offered in our regular “On-campus Option”. Students can do almost all coursework online via AIT’s Hybrid Mode of Instruction (Certain programs may require a lab and research work on campus).

How it Works

Typically, the coursework is online via AIT’s Hybrid Instruction. Students take the same course offered to on-campus students via Hybrid Mode. All classes are recorded for later viewing.

After completion of the coursework, students can do their PhD research in the AIT Campus at a flexible time. In coordination with the Program Chair, students may come to campus in short blocks or for entire semesters.

This is not an online program; students still need to come to the AIT Campus for certain activities such as labs or research work and the graduation ceremony. However, we will allow high flexibility for such activities at our beautiful green AIT Campus in Thailand.

The total flexible time to complete the program is 6 years.

Advantages

The Flexible Ph.D. Option gives you the flexibility you need!

- Flexible Time Management, “study when you’re free”, take courses online from home.
- Flexible Payment management, “pay as you study”, payment course-by-course.
- No need to come to the AIT Campus for most of your coursework.
- Work & Study at your own pace from any location.

Cost

The Flexible Ph.D. Option has the same cost as our regular "On-Campus Option". However, all Schools provide AIT Scholarships for eligible candidates. To give you more flexibility, we allow you to pay course-by-course. You need to register for a minimum of 6 credits per semester. You may take up to 15 credits per semester.

How to Apply

To apply, go to the AIT online application form by clicking [here](#) and choose "Flexible PhD Degree" in the drop down menu of the selected program.

Deadline

The application submission is open.

Payment

First, you need to decide how many courses you want to enroll in, the minimum enrollment is 6 credits which is equivalent to 2 courses. The Program Secretary can advise you on details. You need to pay the full fee for your courses before the start of the semester. All details to make payments are at this website, [Click here](#).

Contact & Support

For More Inquiry, please contactadmissions@ait.ac.th

FAQ

Is the degree I get through the Flexible Master's Option the same as the traditional full time on-campus master?

Yes, it is the same degree and you will receive the same graduate diploma. Due to the current situation, AIT has decided to release this new option to better cater the needs of you. We hope that will facilitate your personal and professional development.

What are the requirements for the Flexible Master's Option? Is it the same as the traditional full time on-campus master?

Yes, same entry and graduate requirements, because it's the same degree that you will get.

What is the English requirement for the PhD Master's Option?

It is the same as the traditional full-time on-campus PhD.

Is the Flexible Master's Option an online degree?

No it's not, you still need to come to the AIT campus for certain activities such as labs (only for certain programs) and research work.

Do I need to prove that I am working to join the Flexible Master's Option?

No, you do not need to prove this. Actually, you can do the Flexible Master's Option full time and graduate in 2 years Or as a part-time student and graduate within 4 years. It is totally up to your personal choice.

How much does the Flexible Master's Option cost?

It cost the same as the traditional full-time master. However, we provide AIT Scholarships for qualifying applicants. Details are available from the Schools and the Program.

In addition to the registration fee and tuition fees, you need to pay the application fee (800 Bath) and the Language Center fee (2000 Bath) only once. Can I get a scholarship for the Flexible Master's option?

Yes, qualifying applicants will get the AIT Scholarship. Of course, if you can find an external scholarship to support yourself, you are more than welcome to take this opportunity during your learning at AIT.

When is the Flexible Master's Option offered?

It is offered in the Spring Semester in January. You can apply any time and need to pay the full fee for your registered courses (min 2 courses) before 8 January.

How can I apply for the Flexible Master's Option?

The application is online at this link [Application Form](#). Choose “Flexible Master Degree” in the drop-down menu of the selected program.

How many courses I need to take minimum for every semester and how many courses maximum?

You need to register for a minimum of 2 courses per semester (6 credits) and a maximum of 15 credits.

How fast can I complete my master degree choosing the Flexible Master’s Option?

The fastest completion time is similar to our full-time on-campus masters within a period of 2 academic years.

How long I am allowed to study to complete the Flexible Master’s Option?

The maximum study period is 4 academic years.

How can I pay?

You can pay by money transfer; the details are at this webpage: [Payment Advice](#)

If I chose the Flexible Master’s Option, am I allowed to attend classes on the AIT campus?

Yes, you can attend the classes on campus as well. That’s up to you if you follow classes online via our Hybrid Mode or come to the classroom on campus. However, AIT does not support visas for non-Thai students during coursework time.

Can I choose any program of AIT for the Flexible Master’s Option?

No, this option is only available for selected programs. The full list of Flexible Master’s Option programs is mentioned above on this page.

How I can follow the lectures remotely?

All lectures will be delivered online via AIT’s Hybrid Mode of Instruction. You can attend the classes online in real-time. Currently, we are using ZOOM to connect to the class. The lecturer will be able to see you on ZOOM on a screen in the classroom. You will be able to interact with the lecturer and the students in class and online.

Do I need to have my own Zoom account to follow the classes online?

No, you do not need to have a Zoom account. You will receive a ZOOM invitation to login into the registered classes. However, we require you to use your full name when you log in for the lecturer and the other students in class and online to see who you are.

Are online classes recorded for later viewing?

Yes, all classes will be recorded. You can view them any time later.

What do I need to attend classes online?

You need internet connection and a computer with camera and microphone. The other available option is to use a smartphone as well; however, we recommend you use a computer.

Will I have AIT student status?

Yes, you will be a registered AIT student like every student on campus. However, we do not provide a student visa for the time you conduct the online coursework. We will help you to obtain a student visa for the Master Thesis if you write the thesis on AIT campus.

Will I have an AIT email?

Yes, as an AIT student, you will have an AIT student email account during the study period.

Can I come to the AIT campus for my thesis?

Yes, you can come to the campus and stay on campus at our student residences. If you may prefer, you can stay for 2 semesters to complete your thesis on a full-time basis. Alternatively, you can make other arrangements with your supervisor, e.g. stay on campus in blocks and return home or leave for data collection. This is up to your supervisor and you to arrange.

Can I come to AIT for my graduation?

Yes, sure you can attend the AIT graduation ceremony.

How much is the registration fee?

The registration fee is calculated per credit of your registered courses per semester. The registration fee per credit is 1,667 Thai Baht. For a typical course of 3 credits, the fee is 5000 Thai Baht. You need to register for a minimum of 6 credits (typically 2 courses); then your total registration fee will be 10,000 Thai Baht per semester.

Will AIT help me to get a study visa and come to Campus? Yes, if you come to campus after the completion of your coursework to conduct your thesis research (24 credits) or research study (12 credits) AIT will help you to get a student visa to come to campus. You will not get a student visa for the time you spend on coursework from your home country. Some programs may have a lab for which you need to come to campus. In those cases, AIT will also support your visa.

One Year Master's Degree Program

WHAT ARE THE BENEFITS OF A ONE-YEAR MASTER'S DEGREE PROGRAM AT THE ASIAN INSTITUTE OF TECHNOLOGY?

In the past decade, there has been a very large increase globally in Master's programs that are offered in an accelerated period of time so that they can be completed within one year. The main benefits of such programs are that they:

SAVE TIME:

- This is particularly attractive to those who are working professionals or those who have recently graduated and would like a Master's to strengthen their CV/resume as soon as possible in order to give them a competitive edge when applying for work.
- Students apply themselves intensively but for only half the time than students who follow a more traditional path on regular programs

RETURN TO WORK/ENTER JOB MARKET EARLIER THAN COMPETITORS

- Reducing the amount of time required to earn a master's degree allows graduates to re-enter the job market twelve months earlier than those that complete a graduate degree that follows a two year traditional format. This gives one-year degree candidates a jump start on the competition who will complete their degree in two years.

SAVE MONEY:

Reducing the time required to earn a degree, reduces the costs associated with the degree.

OBTAIN SAME COUREWORK KNOWLEDGE AS THOSE TAKING REGULAR/TRADITIONAL MASTERS PROGRAMS:

- At AIT, students taking the accelerated option sit in the same classes as those taking two years programs. The only difference is that regular Master's Programs include thesis, internship, exchange and 'minors' options (note: for those who might want to complete a PhD in the future, completion of a research thesis when completing a Master's is a highly recommended path).

AIT Programs that can be completed in two semesters (10 months)

Please click on the link to find out more information about each program.

MBAMSc International FinanceMSc Business Analytics & Digital Transformation

HOW TO APPLY?

1. Assess your eligibility and read about the process of application at:[Click Here](#)
2. Complete your application at:[Click Here](#)
3. Once you have submitted all required documents, your application will be reviewed within seven working days

COSTS?

Tuition fees for a regular program at AIT costs between 855,000-960,000 Thai Baht. Living costs for two years are 200,000-300,000. A One Year Master's program costs between 480,000 and 632,000 Thai Baht with living costs half that of the regular Master's programs. There is an opportunity to be considered for an AIT Scholarship for One Year Master's programs. For more information on expenses, please [Click Here](#)

Student Testimonials

Ms. Sasithorn Saeung, (Thailand), MSc. International Finance, School of Management

"The one-year program has been an impressive and memorable journey. I have not only explored and gained financial knowledge but also interact with various background of people; classmates, professors who are thoughtfully of teaching with very practical and in real market, and guest speakers. Moreover, the School has handled and managed the curriculum and hybrid classes to fit with the pandemic of covid19 very well. As a working student, who chose this one-year program, I am so glad to be here."

Mr. Ted Silan (The Philippines), MS in Sustainable Energy Transition

"There were two things I was looking for when choosing where to pursue my Master's degree, I wanted to do a one year Master's program and pursue a program on sustainable energy transition. To my surprise, not many universities offered a Master's program on energy transition in Thailand until I found AIT's energy transition one year program, which ticked all the boxes I was looking for.

The lecturers have been very supportive and inspirational in class and out of the classroom. So far, the program has been a constant challenge since switching from a different field of study from my bachelor's, but the lecturers have always been available to answer my questions, students' being active in group studies, and the environment of the university has made adapting to life at AIT and the level of a Master's program easier."

URL: <https://ait.ac.th/study/one-year-masters-degree-program/>

Student Assistantships

Student assistantship is a great way to maximize your potential by giving yourself the opportunity to get noticed in today's job market, pursuing your interests in more depth, and broadening your networks.

"Your graduate education is more than what you learn in the classroom — it is also the work experience you gain". Student assistantship is a unique experience during graduate studies. It provides an excellent learning environment, exposing students to what it is like to be in the workforce while providing the added benefit of a financial reward.

What is a Student Assistantship?

A Student Assistant is a graduate student offered a specific form of academic employment, for which students must apply and be accepted based on academic excellence and faculty referral. Student assistants receive payment based on the tasks they perform for schools, faculty members, or departments/units.

The objective of the student assistantships is to provide opportunities to the students to gain practical field experience, deepen academic understanding, and to develop a valuable network of contacts to look to for references and advice post-graduation.

How to apply for a Student Assistantship?

Student assistantships are offered through the schools, departments, administration, and various centers of AIT. Application requirements for student assistantships vary by school and as well as by the nature of the task assigned. All Student Assistantship openings will be posted in the Student Assistantship System (SAS), and interested students can apply online. You may also contact your advisor, faculty, and departments for specific academic or research opportunities, which will be also posted in the SAS.

Four Categories of Assistantships

Teaching Assistants:

Support teaching laboratory courses or conducting tutorials and discussion sections, including bridging courses and English tutorials. Required Qualifications: Doctoral and master candidates with a GPA of at least 3.50 with a teaching background and proficiency in English/good communication skills. Salary Range: Baht-200 to Baht-300 per hour.

Non-instructional Teaching Assistants:

who aid in the instructional functions of the Institute but are not involved in oral instruction or e-teaching. Required Qualifications: Master's students with GPA of at least 3.00 or doctoral candidates with GPA of at least 3.50 with the specific skills required for work

Research Assistants:

who assist faculty and staff with research and data collection (e.g. researchers, technical writers, field assistants). Required Qualifications: (a) Master's students who are enrolled for thesis with GPA of at least 2.75 or above or doctoral students with GPA of at least 3.50. Salary Range for category 2 and 3 : Baht-150 to Baht-250 per hour

Staff Assistants:

Staff assistants in the schools and non school units such as: Secretariat of school, offices, library, registry, admissions, career center, housing etc.. A number of students per year will be offered student assistantships during the fall semester admissions cycle. Required Qualification: Master students with a GPA of at least 3.00 and with the needed administrative skills. Salary: Baht 7,500 per month for 20 months, working a minimum of 50 hours per month

For further information and other conditions on student assistantship, please refer to the Student handbook

Practical Information

Academic Advisor

Before applying for a student assistantship, you are advised to seek your Academic Advisor's feedback to ensure approval and credit eligibility.

URL: <https://ait.ac.th/student/student-assistantships/>

Student International Exchange

The objective of an international exchange is to equip AIT students with balanced skills and knowledge by providing an opportunity to learn inside and outside the classroom at a partner university abroad. A positive exchange experience can also offer students an opportunity to cultivate academic knowledge, transversal skills, and intercultural communication, and expand their personal and professional networks. On top of taking credit-bearing classes at a partner university, exchange students are encouraged to participate in conferences, seminars, workshops, and activities available for enhancing targeted and balanced abilities, skills and techniques.

List of Partner Universities

Around 60 international universities around the globe are our student exchange partners. The universities in the following link are available to you for student exchange opportunities. Click to view Exchange Programs

When to Apply

Upon completion of the required courses and achieving required credits, students can apply for international exchange at the SIS Portal for (SET & SERD) and SIS Portal for (SOM).

Semester	Exchange Duration	Application Period
Spring	January to April	1-15 September
Fall	August to November	1-15 March

Eligibility

To be considered eligible for International (outbound) Exchange, you have to meet the following requirements:

- Must be a student enrolled in courses at AIT;
- Students upon completing two semesters / four terms (for SOM) of coursework with minimum CGPA of 3.0 and English level of at least 6.0 on AIT Standard are eligible for going on Exchange.
- Each university has different eligibility requirements including English requirements; therefore, students must go through each of their preferred university's full details for detailed information before applying.
- Approval, in principle, from Academic Advisor.

Period of Exchange and Credit Transfer

The period of exchange should be equivalent to one semester / two terms (for SOM) of the AIT system. The student is required to present the option (see below) to complete 12 credits, and needs to get approval from the AIT faculty advisor who will supervise it in case of project/special study.

The 12 credits of exchange can be completed as follows:

- 12 credits of coursework transferred back to AIT.
- 9 credits of coursework transferred back to AIT, and 3 credits of special study/AIT coursework.
- 6 credits of coursework transferred back to AIT, and 6 credits of project/special study/AIT coursework.

The Special study/projects as part of exchange credits would require the student to focus on a subject that is relevant to the program of study and the region in which they study. Ideally, there will be a co-supervisor of the study/project from the exchange university. If no such co-supervisor is found, then sole supervision from AIT is permitted as long as the study/project clearly focuses on a subject that relates to the exchange and has not been the subject of an essay/report for a course taken on exchange. For policies on special study/project, please refer to section 1-1.1-vii under Academic Requirements of the R&P. For policies on Transfer of Credits, please refer to section 7 under General Requirements of the R&P.

Courses completed can be transferred back to AIT towards partial fulfillment of the credit requirements for the AIT master's program, subject to the discretion of the Academic Program/Department, provided the following conditions are met:

- The courses were taken as part of a relevant graduate program;
- The courses have at least passing grades (with an equivalent grade of at least 3.00/4.00 or "A", "B+", or "B"); (Note: Credits for coursework completed on a pass-fail or satisfactory/unsatisfactory basis can only be transferred through 'credit by examination.');
- The courses are equivalent to graduate courses at AIT;
- The courses were completed within the last 5 years;
- The courses are stipulated in the relevant Memorandum of Understanding or Agreement of our partner universities;
- Only elective courses can be transferred;
- Students transferring course credits should not have been dismissed from the previous institution/university; and
- For collaborative programs, the number of credits that may be transferred will be as approved by the Academic Senate.

Please download the Credit Transfer Form [here](#).

AIT Exchange Scholarship

Due to the generous donations of our alumni and business partners, some AIT Exchange Scholarships are available for outgoing exchange students. For details, please [Click Here](#)

Application Process and Contact Persons

Exchange Coordinators at each Faculty will guide students on the application process.

Practical Information

Academic Advisor

Before registering for courses at the host university, you are advised to seek your Academic Advisor's feedback to ensure credit transfer.

Accommodation Unit

If you are residing on campus, you may inform the Accommodation Unit of your room arrangement during your exchange period before you leave the campus.accommodaon@ait.ac.th

FAQs for Employers

This section provides answers to frequently asked questions from employers about engaging with the AIT Career Center. Learn how to post opportunities, connect with students, and participate in career-related activities.

How can I post a job or internship opportunity on the AIT Career Center platform?

You can post a job or internship opportunity by filling out the “Post A Job Opportunity” request form available under the Contact Us menu. Once submitted, our team will review your request and post the opportunity accordingly. You may view the published listing through the provided link once it is live.

Is there a cost to post job or internship opportunities?

No, job and internship postings are currently free of charge. If there are any changes to this policy in the future, we will inform our employer partners in advance.

What types of students can I recruit from AIT?

AIT offers a diverse pool of postgraduate students (Master’s and PhD) specializing in fields such as engineering and technology, environment, resources and development, and management. Most students are international and multilingual, with strong academic and professional backgrounds.

Can I recruit students for part-time or freelance projects?

While we do accept postings for part-time or freelance opportunities, we highly encourage employers to offer full-time roles, as these are better aligned with the career goals and academic schedules of our students. Full-time opportunities typically attract stronger engagement and long-term commitment.

How do I participate in career events organized by the AIT Career Center such as Career Fair, Career Talk, and Career Forum?

AIT hosts a Career Fair every March and a Career Forum every October. To participate, you may register through our official event invitations or contact us directly atcareercenter@ait.ac.th. Event details and updates are also available on the AIT Career Center website.

Can I request a dedicated company info session with AIT students?

Yes! We welcome companies to organize their own information sessions or recruitment talks, either on campus or online, to connect directly with our students. Kindly contact us at least 4 weeks in advance so we can schedule and promote it to our students.

Can AIT help me find students for internships or thesis collaboration?

Definitely. We can help connect you with students who are seeking internship placements or research collaboration. Please contact us directly at careercenter@ait.ac.th with your specific requirements.

What is the typical internship period at AIT?

Internships at AIT are flexible and vary depending on the academic program. However, most students are available for internships from January to April (for January intakes) and from August to November (for August intakes). The internship should cover a minimum of 480 hours over at least three months. Internships may serve as a degree requirement or as an opportunity for students to enhance their skills and gain practical experience.

How do I contact the AIT Career Center team for support?

You can reach us via email at careercenter@ait.ac.th or use the Contact Us forms on our website. We're happy to assist with postings, events, and general inquiries.

Join us at AIT

We want to get to know you through your application, to hear your voice and explore your potential. We hope you get to know yourself better through the application process, too.

Across each and every program, we actively seek students from a wide variety of backgrounds. We value the exceptional academic talent, intellectual curiosity, individual perspectives, creativity, and other defining attributes that each student uniquely contributes to our community.

Programs

AIT provides students with distinctive opportunities to undertake their studies in rigorous and challenging ways. Each program requires its own application for participation.

Deadlines and notifications

The AIT academic year consists of two semesters: January and August. The deadlines of applications for admissions and financial aid (Scholarships) are as follows:

January Semester/Term Intake:

- 20 December is the deadline for overseas applicants, requiring educational visa

March Term Intake (only for Faculty of Business Management)

- 15 February is the deadline for overseas applicants, requiring educational visa • 25 February is for other applicants

June Term Intake (only for Faculty of Business Management)

- 15 May is the deadline for overseas applicants, requiring educational visa • 25 May is for other applicants

August Semester/Term Intake: January Intake

- 28 February is the deadline for HM King's and Queen's, and GMS scholarships • 31 March is the deadline for other Scholarships (i.e. ADB-JSP, Bangchak: Master and Doctoral and others) • 10 June is the deadline for AIT Scholarships including RTG Fellowships • 30 June is the deadline for overseas applicants, requiring educational visa • 25 July is for other applicants

October Term Intake (only for Faculty of Business Management)

- 15 September is the deadline for overseas applicants, requiring educational visa • 25 September is for other applicants

Master's Degree Program

Eligibility Requirements for the Master's Degree Program

MSc/MEng: 2 Year Program MS/MA: 1 Year Program MBA: 2 Year and 1 Year Program PM: 1 Year Program

To be eligible for admission to the regular Master's program, an applicant must:

- Hold a Bachelor's degree (normally from a four-year program), or its equivalent, in an appropriate field of study from an institution of good standing acceptable to AIT;

- Have undergraduate grades significantly above average; the minimum cGPA requirement for admission to the Master's Program is 2.75 or equivalent, at the Bachelor's degree level;
- English Proficiency Requirement: AIT-EET: 6; IELTS Academic: overall 6 (writing 6); TOEFL iBT: overall 80 (writing 21-23); & PTE Academic: overall 52 (writing 62-73)
- Be in satisfactory physical and mental health, and have a record of good conduct;
- For the Professional Master's (PM) degree program, in addition to the above-mentioned eligibility requirements, an applicant must: Have at least 3 years of work experience in areas related to the academic program at AIT and Be executives in organizations/companies.

Please note that applicants applying for 1-year Master Degree Program are not eligible for Scholarships/Fellowships. However, applicants may seek funding from external sponsors.

MPhil 2 Year Program

To be eligible for admission to MPhil, an applicant must:

- Hold a Bachelor's degree (normally from a four-year program), or its equivalent, in an appropriate field of study from an institution of good standing acceptable to AIT;
- Have undergraduate grades significantly above average; the minimum cGPA requirement for admission to the MPhil Program is 3.0 out of 4.0 scale or equivalent, at the Bachelor's degree level;
- English Proficiency Requirement: AIT-EET: 6; IELTS Academic: overall 6 (writing 6); TOEFL iBT: overall 80 (writing 21-23); & PTE Academic: overall 52 (writing 62-73)
- Be in satisfactory physical and mental health, and have a record of good conduct;
- Submit a brief outline of the research proposal. [Apply Here](#)

URL: <https://ait.ac.th/eligibility/masters-degree-program/>

Doctoral Degree Program

To be eligible for admission to the regular Doctoral degree program, an applicant must:

- Have strong academic records (both undergraduate and graduate) and normally hold a four-year bachelor's degree and a Master's degree*, preferably with a combination of course and thesis work, from an institution of good standing, acceptable to AIT. The minimum cGPA requirement for admission to the doctoral program is 3.50 or equivalent, at the Master's degree level.
- English Proficiency Requirement: AIT-EET: 6; IELTS Academic: overall 6 (writing 6); TOEFL iBT: overall 80 (writing 21-23); & PTE Academic: overall 52 (writing 62-73)
- Submit a brief outline of dissertation research proposal (5-10 pages) including the required research facilities, if necessary.
- Two recommendation letters.

*Applicants with a one-year master's degree, a one-year professional master's degree, or a one-year postgraduate diploma can enroll in the doctoral program by completing an additional 12-24 credits of coursework, obtaining a CGPA of 3.5, and achieving a very good or excellent grade in their research study, in addition to the required 84 credits for the doctoral program.

Certificate and Special Program

Eligibility Requirements for the Certificate and Special Program

Certificate Program

Certificate students need to satisfy the eligibility requirements similar to those entering the master's degree program and have the appropriate background to take selected courses. In exceptional cases, candidates who lack formal academic qualifications but who have extensive and appropriate professional experience may be considered for admission; the discretion in such cases rests with the School Deans.

Special Program (Exchange and Visiting Students)

Candidates coming to AIT for programs or courses of at least one semester are considered as Special students: Visiting Students. Candidates under non-degree academic exchange agreements between AIT and their home universities are also enrolled at AIT as Special students: Exchange

Students.

Here <https://www.ait.ac.th/admissions/application-form/>

URL: <https://ait.ac.th/eligibility/certificate-and-special-program/>

Fellows of AIT

Eligibility Requirements for Fellows of AIT

Individuals whose qualifications are considered acceptable and who have requested to be attached to the Institute to do research are considered for an appointment as 'Fellows of AIT'. A Fellow of AIT has the privilege to use Institute research facilities, the library and recreational facilities and may audit courses with the permission of the instructor. To apply, candidates must submit to the relevant School an AIT Application (Form 1), a copy of CV and a research study plan. Fellows of AIT are endorsed by the relevant School Deans and are formally invited to the Institute by the Vice President for Academic Affairs.

- A candidate, who has completed a doctoral degree from an institution recognized by AIT, is offered admission as a Post-Doctoral Fellow.
- A candidate whose qualifications are equivalent to an AIT master's degree student is considered for admission as a Research Fellow

BP – Language Center

[HOME](#)

Get Ready for Graduate Success with the Bridging Program (BP)

The Bridging Program (BP) at AIT is more than just an English course—it's your first step toward success in graduate school. Tailored for students who will study in English, the BP strengthens your language skills while also building your confidence in research, academic writing, presentations, and independent learning.

You'll live and learn in an English-speaking environment, get used to how things work at AIT, and become part of a diverse, supportive, and multicultural community. By the time the semester begins, you won't just be prepared—you'll feel right at home.

Date: 15 June – 24 July 2026 (The registration deadline is June 5th)

Time: 9:00 – 15:30; Monday to Friday

Duration: 6 weeks

Cost: 35,000 Thai Baht [Click here to see payment advice.]

Registration: contact the AIT Admission via admissions@ait.ac.th if you wish to join the program

Program Overview

This intensive six-week program prepares postgraduate students to succeed in English-medium academic environments. It develops foundational academic skills through interactive, student-centered learning focused on real-world academic and professional contexts. Each week follows a distinct theme and integrates writing, speaking, vocabulary development, critical thinking, and collaborative activities.

Learning Objectives / Outcomes

By the end of the program, students will be able to:

- Communicate ideas clearly in spoken and written academic English
- Work collaboratively on tasks and research-related activities
- Use academic vocabulary accurately and appropriately
- Summarize, synthesize, and reflect on academic sources
- Present research-informed ideas with confidence
- Navigate common academic expectations (emailing, referencing, discussions, etc.)

Weekly Breakdown

Week	Theme	Focus & Outcomes
Week 1	Building Bridges – Foundations for Success	Develop a supportive learning community; practice academic etiquette; improve basic writing, speaking, and vocabulary; set learning goals
Week 2	Innovation and Creativity – Thinking Outside the Box	Strengthen problem-solving and critical thinking; engage in creative group tasks; explore innovation in academic and professional settings
Week 3	Research Rigor – Navigating the Academic Landscape	Build information literacy; practice summarizing and synthesizing; develop ethical research practices and referencing skills
Week 4	Communication & Collaboration – Sharing Your Expertise	Improve teamwork and communication skills; participate in discussions; learn from alumni and apply lessons to academic contexts
Week 5	Interdisciplinary Perspectives – Connecting Knowledge (Gamified Learning)	Explore connections across fields; apply academic skills in challenge-based, gamified activities; work collaboratively under time constraints
Week 6	Looking Ahead – Presenting Yourself and Your Ideas	Reflect on learning; develop personal academic presentations; improve self-presentation and future goal setting

English Proficiency Requirement For Admission

AIT is an international institute with a mission to serve as a platform for international students from the full spectrum of highly developed to less developed countries. Its residential campus is today a small replica of the world without borders. English is, therefore, its official medium, not only in the classroom but in everyday life, in the interaction among all members of the AIT Community.

AIT is committed to investing in our students’ English multi-literacy proficiency and success. The institute has a human development mandate and works with students to ensure professional competency and to ensure that AIT graduates will advance to become future global leaders in the globalization age. Thus, we provide courses in academic English literacy development to assist students in continuously improving their communication skills while studying at AIT.

All academic English and research communication courses and workshops(except for compulsory English classes for conditional offers) throughout the duration of study are included in the 2,000 Baht one-time flat Language Support fee that students are required to pay at entry.

AIT ENGLISH REQUIREMENTS FOR ADMISSION

There are three ways to satisfy the AIT English requirements for admission.

- Official Test Scores. Submit an official test score. Test scores are valid for only two years from the testing date.

IELTS-AcademicOR AIT English EntryTest (EET) (Writing band only)	Required Courses*	Remarks
6.0 or higher	–	English requirements – satisfied
5.5	EL 19Click here for more information on EL19	* Minimum entry requirements withconditions for doctoral applicants
5.0	EL 15Click here for more information on EL15	* Minimum entry requirements for degree program admission with conditions for Master’s applicants Minimum entry requirements for the Bridging Program for doctoral applicants.
	Bridging ProgramClick here for information on the program dates.	On the assumption that upon completing the 6-week Bridging Program, doctoral applicants can attain an entry score of 5.5 or higher prior to the start of their degree program at AIT. In case the donors of the students are not able to cover the full Bridging Program fee, applicants will pay the Bridging Program fee.

IELTS-AcademicOR AIT English EntryTest (EET) (Writing band only)	Required Courses*	Remarks
4.5	**Bridging Program Click here for information on the program dates.	Minimum entry requirements for the Bridging Program for Master's applicantsOn the assumption that upon completingthe 6-week Bridging Program, Master'sapplicants can attain an entry score of 5or higher prior to the start of their degreeprogram at AIT. In case the donors of thestudents are not able to cover the fullBridging Program fee, applicants will paythe Bridging Program fee.

Note: Applicants applying for full scholarships must submit the English Proficiency Test Score of 6.0 (writing and overall) score.

All required EL courses throughout the duration of study are included in the 3,000 Baht one-time flat EL fee. The fee is to be invoiced to students in the EL track by Language Center and to be settled by the said students in their first semester. This EL fee is on top of the 2,000 baht Language Support Fee paid by all students.

***Students who join the Bridging Program will be exempted from the 2,000-baht Language Support Fee and the 3,000-baht EL fee.**

If you wish to submit an official test score from an official test other than IELTS and AIT-EET, please check the list of all accepted official tests here: please see the table below.

TABLE OF EQUIVALENCY IN ENGLISH PROFICIENCY TESTS

(Writing Band/Section Only)

IELTS-Academic(Writing Band)	AIT-EET	TOEFL IBT (Writing Band)	PTE Academic (writing score)
4.5	4.5	50 (12-13)	n/a
5	5	60 (14-17)	43-50
5.5	5.5	70 (18-20)	51-61
6	6	80 (21-23)	62-73

- Exemption, Applicants who are citizens of an English-speaking country (e.g., Australia, Canada, Ireland, New Zealand, the UK, and the USA) are exempted. Proof of citizenship must be submitted.
- Certificate of English Medium Instruction Applicants who have earned a degree at a university at which English is the sole medium of instruction may submit a document signed by the University Registrar attesting to the English medium of instruction. AIT reserves the right to accept or reject such certificates based on our extensive list of recognized certificates of English Medium of Instruction. Applicants who submit an acceptable certificate are required to sit the AIT Academic Writing Test (AWPT) upon arrival/enrollment and must obtain a score of 5. If the score is less than 5, he or she will not be allowed to register for the courses.

AIT Scholarships

The Asian Institute of Technology (AIT) in Thailand is offering applicants to its Master's and Doctoral degree programs an opportunity to qualify for generous academic scholarships. A large number of no-bond AIT Scholarships are available for students applying for postgraduate programs offered at AIT's Faculty of Infrastructure, Faculty of Technology, Faculty of Resource, Faculty of Climate Change, and the Faculty of Public Policy and School of Management (SOM). As Asia's leading international higher learning institute, the AIT Scholarships are intended to increase the number of skilled international scientists, engineers, and managers required to meet the future challenges of the emerging Asian Economic Community region and beyond.

AIT Scholarships are a form of financial aid that provides an opportunity for students from all over the world to study together at AIT. It helps subsidize part of the study cost by covering full, or a portion of, tuition for qualified students, while the students are responsible for the rest of the tuition, the registration fees (20,000 Baht per semester to maintain student status), and the living expenses (around 11,500-15,000 Baht per month). Each school has its Selection Committee. The Selection Committee will propose the value of the AIT Scholarships grant for each applicant (if eligible) for approval by the School Dean. This AIT Scholarships grant can only be given once before enrollment and cannot be changed over the entire study period.

Eligibility

- All nationalities;
- Meeting AIT's English Proficiency Requirement (i.e. IELTS-Academic or AIT EET score of 5.0 or above for Master's and 5.5 for Doctoral program);
- Having a four-year Bachelor's degree from a recognized university;
- Having a master's degree from a recognized university for Ph.D. applicants and should have a Cumulative GPA of 3.50 in their Master's degree and 2.75 in their undergraduate program from top universities.

Deadline for August 2026 Intake: 15 July 2026

Computer and Structures, Inc. Scholarship

In December 2017, a Memorandum of Understanding is signed between AIT and CSI, USA to establish and announce CSI scholarship for students applying for the Master's degree program in Structural Engineering, School of Engineering & Technology.

Eligibility

- Country: Pakistan
- Will study Master's degree program in the field of Structural Engineering
- Graduate of Bachelor with a cumulative GPA of at least 2.75
- Official English Score: IELTS writing score of 5.0 or AIT EET Score of 5.5
- Must fulfill the AIT Admissions Requirements.

Deadline for Fall semester (August 2025 intake): 30 June 2025

URL: <https://ait.ac.th/financial/computer-and-structures-inc-scholarship/>

Element Solutions Foundation scholarships (August 2026 Intake)

The Asian Institute of Technology (AIT) received a donation from the Element Solutions Foundation to support tuition fees for two Master's students in the August 2026 intake.

The Element Solutions Foundation is a charitable giving entity. Funded through contributions made by Element Solutions Inc. (ESI), it provides grants to qualified charitable organizations in the communities where ESI's employees live and work, and matches employee donations at 100%.

The Foundation focuses on causes essential to the environmental and social well-being of our communities, making grants throughout the year that matter most to ESI's employees.

CRITERIA:

- Nationality: ASEAN, preferably Thai nationals
- Study for a Master's degree in the Chemical/Electronics Engineering related programs, such as: Semiconductor Engineering (SCE) Bio-Nano Material Science & Engineering (BNMSE) Industrial & Manufacturing Engineering (IME) Mechatronics & Machine Intelligence (MMI) Environmental Engineering & Management (EEM) Sustainable Energy Transition (SE)
- The candidate should have a cumulative GPA of at least 2.75
- Candidate should pass IELTS with a score of 6.0 or AIT-EET Score of 6.0
- Applicant must fulfill the AIT Entry Requirements

Deadline for August 2026 intake: 30 June 2026

URL: <https://ait.ac.th/financial/element-solutions-foundation-scholarships-january-2026-intake/>

Japanese Government Scholarships

The Government of Japan is offering Doctoral scholarships in Remote Sensing and Geographic Information Systems (or) Mechatronics and Machine Intelligence of the School of Engineering and Technology (SET) from the following priority countries.

1. Southeast Asia: Myanmar, Cambodia, Vietnam, Laos, Indonesia, Philippines, Thailand, and Malaysia
2. South Asia: Nepal, Bangladesh, Pakistan, India, Bhutan and Sri Lanka

Eligibility

- Have strong academic records (both undergraduate and graduate) and normally hold a four-year Bachelor's Degree and a Master's Degree, preferably with a combination of course and thesis work, from an institution of good standing, acceptable to AIT. The minimum GPA

requirement for admission to the Doctoral program is 3.50 or equivalent at the Master's degree level.

- Submit a brief outline of the dissertation research proposal, including the required research facilities, if necessary.
- English Proficiency Requirement: TOEFL (Computer-based: 210 or iTOEFL: 76) or IELTS-Academic: 6 (writing and overall) or AIT-EETScore of 6 or equivalent...

Coverage

- Tuition and registration fees (maximum 6 semesters)
- Bursary and accommodation costs
- Visa fee
- Medical insurance
- Student Union fee
- Research support
- One round-trip international air travel-economy class (for non-Thai applicants)

Deadline for August 2026 Intake: 30 April 2026

Mitani Trading (Thailand) Co., Ltd. Master's Scholarship with Job Offer

Mitani Trading (Thailand) Co., Ltd. was established in 1988 to support Thai and Southeast Asian markets. The company is a well-known Japanese packaging manufacturer and distributor of valves, pumps, sprayers, triggers as well as accessories such as caps, spouts, and actuators under Japanese standard quality. Mitani Trading (Thailand) Co., Ltd. is a subsidiary of Mitani Valve Co., Ltd. based in Japan.

This scholarship is for the Department of Industrial Systems Engineering (ISE), School of Engineering & Technology (SET) enrolled in either one of the following programs

- Bio-Nano Material Science and Engineering
- Mechatronics
- Industrial and Manufacturing Engineering
- Microelectronics and Embedded Systems

CRITERIA

- Thai nationality
- Graduate of Bachelor with a cumulative GPA of at least 2.75
- English Proficiency Requirement: AIT-English Entry Test (AIT-EET):6 or IELTS-Academic:6 (writing 6)
- The applicant must fulfill the AIT Entry Requirements.
- Applicant must maintain cGPA 3.00 or higher during his/ her study in order to retain Mitani Scholarship.
- The student's research/ thesis topics should be of interest to Mitani Trading (Thailand) Co., Ltd. and must be under one of the following topics:

6.1 Digging Deeper into Fog Technology 6.2 Manufacturing Engineering, Robotics 6.3 Inventory Control 6.4 Control of the Jet Sound 6.5 Research on Jetting Agents 6.6 Foaming Technology 6.7 Human Engineering 6.8 Search of New Materials

NOTE: The selected candidate will be offered not only a full scholarship but also a guaranteed job with the Mitani Valve Co., Ltd. in Japan. Also, the company will provide a Japanese language course (free of charge) to the selected candidate during his/ her studies at AIT.

Deadline: 15 November 2025 for January 2026 Intake

RTG Fellowships (Ph.D) to Support the Asian Innovation Hub

As part of AIT's mission to build alliances and foster networks in education, research, and development both within Thailand and internationally, these fellowships aim to address the development needs of Thailand and other Asian countries. The program aspires to produce highly qualified graduates who are widely recognized and valued across the region. Additionally, it seeks to advance high-quality research and innovation in specialized fields that can lead to commercial applications.

With Thailand's strategic geographical position as the gateway and hub of Asian countries, combined with AIT's strength in collaboration with international organizations and world-class universities, AIT is uniquely positioned to deliver cutting-edge research. This includes partnerships with leading academic institutions and industrial sectors globally.

The RTG Fellowships (Ph.D.) to support the Asian Innovation Hub are designed to cultivate expertise in the fields of Science and Technology, enabling students to conduct groundbreaking research that supports the Asian Innovation Hub and addresses the increasing demand for advanced research in Thailand. The program offers an exceptional opportunity for Asian nationalities, including Thais, to pursue doctoral degrees, with thesis topics aligned with AIT but not limited to the 13 academic programs below.

Eligibility Criteria

- Nationality: Applicants must be citizens of Asian countries, including Thailand.
- cGPA RequirementsBachelor's Degree: A minimum cumulative GPA of 3.00 on a 4.00 scale or equivalentMaster's Degree: A minimum cumulative GPA of 3.50 on a 4.00 scale or equivalent.
- English ProficiencyApplicants must meet the English proficiency requirements stipulated by the AIT Language Center: an IELTS score of 6 (with a minimum score in the Writing section) or an AIT EET score of 6 or above.
- Two recommendation letters
- Brief outline of dissertation research proposal (5-10 pages)
- Applicants must have a research interest in science and technology within, but not limited to, one of the following academic programs:Civil and Infrastructure EngineeringRemote Sensing and GISsustainable Energy TransitionMechatronics and Machine IntelligenceWater Resources and Environmental EngineeringFood engineering and bioprocess technologyAquaculture and aquatic resources managementFood Innovation, Nutrition and HealthData Science and Artificial IntelligenceInformation and Communications technologyUrban innovation and sustainabilityAgriculture systems and engineeringNatural resources management

Coverage

RTG Fellowships (Ph.D.) to support the Asian Innovation Hub cover tuition and registration fees, research grant, but do not cover accommodation fees or living expenses. The value of the non-binding Scholarship per student is approximately 1.53 MB.

Deadline for August 2026 Intake: 31 March 2026

Please note:

Eligibility Restriction for RTG Fellowship (Ph.D.) to Support the Asian Innovation Hub: Applicants who have previously been awarded an RTG Fellowship for a doctoral degree program at AIT are not eligible to receive another RTG Fellowship for a doctoral degree, irrespective of the academic program.

Apply here:<https://ait.ac.th/apply-online/>

Contact: Ms. Wilailak at 02-524-5023 or Ms. Kanchana at 02-524-6119 or Email:rtg@ait.ac.th.

Further Inquiries

For further inquiries on AIT Admissions Requirements and Procedures, applicants can visit the AIT Admissions website. You may also contact the following address:

URL: <https://ait.ac.th/financial/rtg-fellowships-ph-d-to-support-the-asian-innovation-hub/>

RTG Fellowships for Thai applicants

The vision of the Royal Thai Government (RTG) is to prepare the country and its people for the emerging ASEAN Economic Community (AEC). Through its non-binding RTG Fellowships at AIT, it seeks to prepare its engineers, scientists and managers to become global citizens and emerge as key drivers of Thailand's international competitiveness. Thus, generous academic fellowships are being offered to Thai students to pursue Master's and Ph.D. programs

*Eligible for Thai nationality only.

RTG Fellowships for Ph.D. Programs

Eligibility1. cGPA: Bachelor's: $\geq 2.75/4$ or equivalent Master's: $\geq 3.50/4$ or equivalent In cases where the applicant does not meet GPA criteria, he or she can submit an article indexed in Scopus along with the GPA to fulfill the criteria.

Have an English proficiency score as required by AIT Language Center (IELTS 5.5 (Writing band) or AIT EET ≥ 5.5). Should the score be 5.0, the applicant is required to attend the Bridging Program to obtain a score of 5.5 from the Bridging Program before enrollment.

2. The value of the non-binding Scholarship per student is approximately 1.50 MB.

Deadline for August 2026 Intake: 31 May 2026 or until the RTG fellowships runs out

RTG Fellowships for Master's Programs

RTGFellowship	Value of Fellowship Grant	Cumulative GPA requirement for specified universities*	Cumulative GPA requirement for other universities
100% (48 credits)	848,000 Baht (covers entire study cost of 4 semesters)	GPA ≥ 3.00	GPA ≥ 3.50
87.5% (42 credits)	752,000 Baht (covers 42 credits fees and 4 semesters registration fees, student pays remainder 6 credits: 96,000 baht, tuition fees)	-	GPA ≥ 3.25
75% (36 credits)	636,000 Baht (covers 3 semesters, student pays remainder 212,000 baht as one semester cost)	GPA ≥ 2.75	GPA ≥ 3.00
50% (24 credits)	424,000 Baht (covers 2 semesters, student pays same amount for 2 semesters)	-	GPA ≥ 2.75

Eligibility

- a Four-year Bachelor's degree from a recognized university with the cGPA criteria as follows:
- Have an English proficiency score as required by AIT Language Center (IELTS 5.0 (Writing band) or AIT EET ≥ 5.0). Should the score be 4.5, the applicant is required to attend Bridging Program (starting from 15 June to 24 July) and to obtain a score of 5.0 from the Bridging Program before enrollment. See <http://languages.ait.ac.th/bp/for> further information).

Deadline for August 2026 Intake: 31 May 2026 or until the scholarship run out

Please note:

- RTG Fellowships cover tuition and registration fees, but do not cover accommodation fees or living expenses.
- Eligibility Restriction for RTG Fellowship Recipients Pursuing a Second Degree (Master's/Doctoral): Applicants who have previously received an RTG Fellowship for a master's or doctoral degree program at AIT are ineligible to receive another RTG Fellowship for pursuing a second degree at the same level (e.g., second master's or second doctoral degree), regardless of the academic degree program.
- *Definition of specified universities()* 2.1 Thailand's top 1,000 universities ranked by QS World University Rankings which includes (1) Chulalongkorn University #271, (2) Mahidol University #380, (3) Chiang Mai University #651-700, (4) Thammasat University #601-650, (5) Kasetsart University #800+, (6) Khon Kaen University #801+, (7) King Mongkut University of Technology Thonburi #801+, and (8) Prince of Songkla University #801+.(*) 2.2 Thailand's top 350 Asian Universities ranked by QS World University Rankings which includes (1) King Mongkut's Institute of Technology Ladkrabang # 261-270, (2) Suranaree University of Technology #301-350, (3) King Mongkut's University of Technology North Bangkok #301-350 (4), Naresuan University #301-350 and (5) Silpakorn University #301-350.
- See <http://languages.ait.ac.th/bp/for> further information on the Bridging Program.

Interested applicants can apply through the AIT [online admission](#) portal. No separate application to fill out. Applicants may describe in their statement of purpose seeking this scholarship. This can be in a separate file and uploaded to the application portal.

Health & Wellness

Welfare

Here is some more information on welfare and support services AIT community members may find useful. Advice is also available from schools, department and the Student Union. Guidance and counselling In a multinational environment such as AIT campus, AIT provides mentoring/counselling/peer support programs to support students, faculty and staffs including those from underrepresented groups on academic and non-academic matters.

- Personal Counseling
- Dispute Mediation
- Harassment Issues
- Gender Related Matters
- Feeling of Academic Inadequacy
- Difficulties with English Language

Any AIT community member who wishes to seek advice/counseling or lodge a complaint can request for an appointment by contacting:

Email to: student- welfare@ait.ac.th/ hro@ait.ac.th Call to: 02-524-6744

Personal visit: Stop by to schedule an appointment with the Student Welfare or Human Resource Officers.

Disability Support

Accommodation suitable for disabled, wheelchair users and those needing extra space for special equipment are available (4 non-air-conditioned in Dorm C and 4 air-conditioned in Dorm X and Y) Contact Accommodation Office or send email to : accommodation@ait.ac.th

Health

The AIT Medical Center offers health care visits with both male and female doctors and nurses. You can contact us and make a reservation by phone.

Scan QR to make an appointment or [Click Here](#)

Working days : 7:00am – 11:00pm

Holidays : 7:00am – 11:00pm

Next to AIT Conference Center AITCC

Medical Insurance

Every faculty, students, and staffs members at AIT are provided with free, compulsory standard medical insurance plan. The standard plan, which entails an annual premium covers certain costs for hospitalization, outpatient treatment, dental as well as life plus personal accident.

Fitness center

We are proud to offer a facility that caters to the on-campus lifestyle. We are happy to introduce you to our new facility. We also offer a variety of ways to get fit and have fun including; group fitness classes.

Working days: 8:00am – 9:00pm

Holidays : 8:00am – 9:00pm

Above AIT Cafeteria, Second Floor

Student union

Student Union of AIT is the representative body for all the students at AIT. Objective of Student Union is to foster good relationships and encourage harmony among its members, as well as the other members of the community, and better understanding of their various backgrounds and cultures, through activities.

Accommodation Office – Office of Facilities and Assets Management

URL: <https://ofam.ait.ac.th/asset-management/accommodation-office/>

Campus Accommodation facilities

AIT campus has accommodation facilities for both students and employees. There are 1406 student dorm units and 373 employee units.

An appropriate housing facility for all types of students & staff who are single or married, with cooking and no cooking facility, air-conditioned or non-air conditioned. The facility also includes few disabled accommodation units to cater special needs. Dormitories are equipped with furniture, Internet facility and required maintenance services.

A student registered to doctoral, master’s, diploma, certificate or special programs and AIT faculty/staff are eligible for accommodation on campus.

Student Accommodation

Accommodation Facilities

- Campus accommodation with air-conditioned/non air-conditioned & 53% of the units have cooking facility in rooms*
- Provides following maintenance services
- Electrical equipment, furniture, sanitary, building maintenance, gas delivery
- Weekly cleaning services
- Linen (one set) is provided to each student living in accommodation units. One set includes one pillowcase, two bedsheets, and one pillow.

Special accommodation facility for disabled

- Accommodation suitable for disabled, wheelchair users and those needing extra space for special equipment are available (4 non-air-conditioned in Dorm C and 4 air-conditioned in Dorm X and Y)

Dorm allocation procedure

- For new students, units are allotted to the student at the start of the semester through lottery.
- Students can queue later for the desired room, which will be allocated as per the availability.
- To view the status of queue clickStudent accommodation allocation
- Please register to queue for the preferred room type at accommodation office. For more details, please refer to student handbook.

Accommodation rental & utilities payment

Invoice will be generated every month and will be shown in the Student Information System (SIS) and payment should be made at Accommodation Office Cashier.

- Payable on first day of each month.
- The first invoice will include rental for 2 months (1-month advance & 1-month rental)

Sanctions for unpaid rental and utilities:

- Interest penalty of 1.5% per month is imposed if amount remains unpaid after 30 days.
- If outstanding amount exceeds two-months rental, student will be required to vacate the rooms. L, Q, M, N, R, S L, Q, M, N, R, S Dorm L, Q, M, N, R, S Student Village-III Student Village-I Student Village-II Dorm A-H Category-1 Dorm A-H Cat-3 Dorm L, Q, M, N, R, S Cat-4 Dorm T,U,V,W,X,Y

AIT Sport Facilities – Office of Facilities and Assets Management

URL: <https://ofam.ait.ac.th/ait-sport-facilities/>

AIT Sport Facilities

Sports and Recreation

With its extensive open space, AIT campus offers many opportunities for sports activities that include golf, swimming, basketball, badminton, tennis, table tennis, volleyball, football, cricket, hockey, running, squash and petanque, etc.

A multi-purpose field, used as a football field, cricket field, running track, squash courts, tennis courts, badminton courts, basketball court and volleyball court are all located near the residential area while the table tennis room and other tennis courts are closer to the cafeteria.

The renovation of the multipurpose field had been completed in 2012 after floods in 2011, with the support of Thailand Cricket Association. Often Thailand Cricket Association organizes cricket matches and practice matches, the student cricket and football club of AIT are associated with other universities to play inter-university matches. Most of the sports fields other than the swimming pool have access to the outsider if accompanied by an AIT member.

Student Union also organizes some trips for the enjoyment of the AIT community. There is a one day trip and the other one is the Grand trip for 2-3 days. Various cultural events are also organized to enhance friendships among different country associations and promote their cultures for the highly diversified AIT Community.

General Sports Facilities House Rules:

- Sports hours: Monday to Sunday, 6:00 a.m. – 11:00 p.m.
- Proper sports attire is required for each sports facility. Slippers/flip-flops are not allowed.
- Users must follow standard sports rule for each facility or upon mutual agreement of players depending on need.
- Sportsmanship and proper decorum is highly encouraged in the conduct of sports events.
- First come-first served basis rule must be followed for each court/field and queuing must be adhered to if there are many players waiting. Priority for use of AIT residents.
- For racquet sports, doubles events should be prioritized over single events if there is a queue.
- Sports facilities cannot be used for other sporting events aside from the intended use of the court/field.
- Food and beverages are not allowed in the sports facility. Food may be consumed on the sitting area only.
- Last players of the evening must turn off the lights and other electrical equipment of the court.

- Student organizations who wish to book the courts/fields must seek permission from the Student Union and inform the community before its use.
- Individuals breaking the sports facility house rules will be subject to possible forfeiture of privileges.

Swimming Pool

- The swimming pool is located behind the AIT Conference Center and changing rooms are available. A lifeguard is on duty daily from opening to closing time. The users of the pool should only be AIT community members which includes AIT staff, students and their families and visitors at AITCC. Outsiders are not allowed. All users have to register before using the swimming pool and the swimming pool staff may also request for the AIT ID verification.

Swimming Pool Regulations:

- Pool hours: Monday to Sunday, 6:00 a.m. – 7:00 p.m.
- Reserved for Ladies – every Wednesday from 1:00 p.m. onwards
- Proper swim wear is required. No outerwear including cut-offs or shorts will be allowed.
- Food and beverages are not allowed in the pool.
- Liquor or any intoxicating drinks is prohibited. Individuals intoxicated with liquor are not permitted to use the pool. Lifeguards and/or security guards have the authority to prevent intoxicated individuals from entering the pool area.
- Smoking is not permitted at the pool.
- Take a shower before getting to the pool.
- Take off shoes or slippers before entering the pool.
- No screaming, running, rough play or any activity that would disturb other users.
- No spitting, spouting water or blowing nose in the pool.
- Children must be accompanied and supervised by parents or guardians
- Inexperienced swimmer must be accompanied by an experienced swimmer.
- Persons suffering from contagious diseases or those with open wounds are strictly prohibited from using the pool.
- For training sessions, prior permission has to be taken from OFAM and trainer need to pay for using the facilities.
- Individuals breaking the pool regulations are subject to possible forfeiture of swimming privileges. etc

Security – Office of Facilities and Assets Management

URL: <https://ofam.ait.ac.th/campus-maintenance/security/>

Facilities – AIT Conference Center

URL: <http://aitcc.ait.ac.th/facilities/>

The AITCC role is to provide modern, efficient and fully equipped on-campus conference facilities for use by trustees, faculties, students, alumni, staff, visiting lecturers, course participants, other visitors to the Institute and the campus community in general. The AIT Campus has many opportunities for exercise and sport – please check at the Reception Desk for locations and availability.

The campus is almost self-sufficient with all the needed facilities

- Post Office,
- Bank, Student
- Cafeteria
- Thai Restaurant
- numerous Food & Beverage Outlets and
- Boutiques,
- Bookstore & Stationery Shop,
- Hairdressing Salon,
- Tailor,
- Travel Agents
- 7 Eleven
- Convenient store
- Future Park – is just ten minutes away by bus.
- Public Transport Bus No. 510 leaves from just outside the main gate linking all areas of Bangkok and the surroundings, and one of the major local shopping and cinema complexes –

The Reception Desk will reconfirm airline reservations, and make onward tour and hotel bookings for guests, and can provide information and maps about the campus, local sightseeing and about Thailand in general.

There is a swimming pool easily accessed from the AITCC guest rooms; tennis, badminton, squash and volleyball courts; football fields and jogging areas; also the Student Union operates male and female exercise rooms.

AITCC has its own business center, where guests and course participants can access Internet, email, word processing and other computing necessities. Photocopying, laminating, typing, and fax receipt or transmission are available 24 hours a day.

About AITCC – AIT Conference Center

URL: <http://aitcc.ait.ac.th/home/>

AITCC– a fully equipped conference center at your doorstep, surrounded by many rais of beautiful greenery and wildlife, and away from the noise, traffic and pollution of the city. The role of AITCC is to provide modern, efficient and fully-equipped on-campus conference facilities for use by trustees, faculties, students, alumni, staff, visiting lecturers,

course participants, other visitors to the Institute and the campus community in general. It has facilities to cater to a wide range of conference and seminar needs from 10-500 people. The 500 seat tier auditorium is fully equipped and state-of-the art perfect for holding big conferences and other social gatherings. There are more than 100 guest rooms varying from suites, superior and standard rooms, together with a selection of dining and other eating or drinking venues. The Reception Desk will reconfirm airline reservations, and make onward tour and hotel bookings for guests, and can provide information and maps about the campus, local sightseeing and about Thailand in general. Please click on the main menu at the top to get more details about our facilities and services. If you require additional information, please do not hesitate to contact us in person, or email toaitccr@ait.ac.th by phone at 02-524-5250 We look forward to hearing from you and welcoming you to the Center.

Frequently Asked Questions – Asian Institute of Technology

URL: <https://ait.ac.th/admissions/frequently-asked-questions/>

Program Offerings

1. I want to study at AIT. What does AIT offer and what are the admissions requirements?

The Institute offers Doctoral Degrees, Executive Master's Degree, Master's Degrees, Professional Master's Degree, Diploma & Certificate Programs, Non-degree programs & Intensive English language.

- For eligibility requirements on the Degree Programs, please visit the Admissions website.
- For non-degree training, please visit the AIT Extension and Language Center

2. Can I apply to two Academic Programs at the same time?

No. You can only apply to one academic program at any time

3. What Academic Programs and Courses does AIT Offer?

The Institute currently offers 35 academic programs. For details, please visit our Faculties and School websites: [Faculties – Asian Institute of Technology](#)

4. What is the duration of study?

2 Year Master's Degree students normally study for 22 months (enrolled in August Intake) and 24 months (enrolled in January Intake) which includes four semesters, two short breaks and one long break between semesters. Doctoral students study for at least 42 months or seven semesters. 1-year Master, Professional Master Program and the Diploma Programs are at least 12 months or two semesters and the Certificate Program is 5 months or one semester.

5. Do you have academic exchange programs and scholarships for those?

Yes, we have academic exchange programs with various partner universities in Asia and Europe. AIT has a limited number of scholarships to assist our students to go on academic exchange. You can apply for an academic exchange program and the scholarship in your second semester of study at AIT.

6. Do you provide minors?

Yes, AIT provides the option to graduate with a minor. Starting from the August 2020 semester onward, AIT offers a Minor. This can be discussed upon enrollment with your academic program. There are no additional cost in pursuing a minor. A total of 12 credits in the minor program are required.

7. Is all communication and all documents and teaching material in English?

Yes, AIT is an English speaking campus. All communication is in English, more details under FAQ number 5 under the requirements.

8. What are Unified programs?

Unified Programs integrate undergraduate studies with graduate studies into a seamless "Unified" program. For example, undergraduate students may join AIT in their final year to complete their undergraduate degree and at the same time start their Master program at AIT. AIT has several Unified programs with our partner universities managed by our Office of Special Degree Program

9. Do I need to apply for the scholarships listed on the AIT scholarship website?

You do not need to apply separately for the scholarships. Once you have submitted the application online, you will be automatically considered for all scholarships for which the deadline has not expired and for which you are eligible. The type and amount of scholarship given to applicants is on a competitive basis with the main criteria of academic standing. Should you wish to be considered for full scholarships, you must submit an Official English score of 6 including writing and overall that is not older than 2 years. Please check acceptable test results [here](#).

Requirements

1. How can I obtain the application form?

Application to AIT is now fully online. Thus, please apply using the [Online Application System](#).

2. Who must write my letters of recommendation?

Your referees should be well acquainted with your intellectual abilities, academic performance, and personal character. Only applicants for the doctoral degree program must submit at least 2 recommendation letters; no recommendation letters are required for master degree programs.

3. Do you require interviews for admission? When and where?

Applicants from selected countries will be called for interview. The School will contact you directly for the arrangement.

4. Will you waive my admission interviews since I was admitted last year but chose not to register?

No. As the application assessment varies from each intake, your application in the next intake must be as competitive as those with others applying in that same intake.

5. Is proof of English language proficiency required?

Yes, all AIT programs are conducted in English; thus, you will need to provide proof of adequate English language proficiency. There are three ways to provide proof of adequate English language proficiency.

- Citizenship of an English speaking country. Applicants who are citizens of and have been educated in an English-speaking country (Australia, Canada, Ireland, New Zealand, the UK, and the USA) are exempted from English testing. Proof of citizenship and studies must be submitted.
- Certificate of English Medium of Instruction. Applicants who have earned a degree at a university at which English is the sole medium of instruction may submit a document signed by the University Registrar attesting to English medium of instruction. AIT reserves the rights to accept or reject such certificate based on our extensive list of recognized certificates of English Medium of Instruction. Applicants who submit a certificate are requested to sit the AIT Academic Writing Test upon arrival to determine their level of proficiency on the AIT scale.

If your submitted certificate is not acceptable, we will inform you immediately. In this case, you are required to submit an English score of AIT-approved tests: English Proficiency Requirement For Admission – Asian Institute of Technology.

- Approved test of English language proficiency. Applicants with good undergraduate records and minimum scores on official tests of English proficiency can be admitted without conditions. The approved tests and minimum scores are:
- AIT EET 6
- IELTS-Academic Module: 6 (Writing band).
- Other test scores such as TOEFL-Internet-based / computer-based / paper-based; CEFR; and, may be considered based on equivalent scores to the IELTS-Academic Module.

Students with good academic records with lower scores may receive “conditional admission”. They will be required to attend English classes at AIT until their scores improve. Please see the test score comparison table here.

Those who are interested in applying but do not meet the minimum English proficiency requirements for admission or conditional admission are recommended to study English in their home countries until they are ready to re-apply.

6. What is the AIT English Entry Test (AIT-EET)?

The Language Center (LC) offers a 90-minute in-house test of English proficiency called the AIT English Entry Test (EET). The score is based on a nine-point scale similar to the IELTS test. The Writing score, which is the most important at AIT, is based on an essay. The test result will be e-mailed within 7 days. The LC will report the test result to the AIT Admissions only if the score is satisfactory for provisional admission. If applicants fail to obtain the minimum score requirements for admission, they may take the test again.

There is no limit to the number of times they can take the test, but we encourage applicants to study and improve their English before retesting. The test is conducted several times per week on campus.

Alternatively, the test can be taken online through our online EET test application.

For more information or English test application, please see here.

7. Where can I find the information about English classes at AIT?

You can find the information on English classes and other services offered by the Language Center here.

8. Are there any Thai classes offered?

Yes, the Language Center offers Thai courses.

9. What is the AIT writing test (AWT)?

All new students who

- have either not submitted a test score for admission (e.g., those who submitted a certificate of English medium of instruction) or
- have taken the online EET or have taken the EET outside of Thailand where the testing was not conducted by AIT Language Center or the 3 Schools of AIT must take the AIT Writing Placement Test (AWPT) to validate their writing scores and to be able to register for classes. The AWPT consists of two tasks. The first is a description of data (75-100 words), and the second is an essay (250 – 350 words). These two tasks are

scored on a nine point scale. (The criteria for scoring are similar to those for the IELTS academic writing test.) For more information, please seehere.

An AWPT score of 6 or IELTS writing score of 6.0 (or LC approved equivalent), or satisfactory completion of EL 19 (Pass) should be attained by the end of the second semester. This will be a condition for registration for dissertation / thesis / research study / project.

Students with AWPT score below 6.0 are required to take mandatory English Language (EL) courses at the AIT Language Center until they meet the English language requirements. Students who wish to attend English courses outside AIT in lieu of the EL courses need to seek prior approval of the Language Center before the start of the program and need to provide proof of attendance.

I obtained a degree at a university at which English is the sole medium of instruction. Can I submit a certificate, in place of English Test score?

You can submit the 'Certificate of English Medium of Instruction' issued by the Registry Office of your previous institute. We do reserve the rights to accept or reject such certificate based on our extensive list of recognized certificates of English medium of instruction. Alternatively, you can take AIT EET test on campus or online. However, should you wish to be considered for full scholarships, you must submit an English test score that is not older than 2 years. Please check acceptable test resultshere.

10. My English test is old, is it still valid?

The validity of English tests is two years. Please check acceptable test resultshere.

11. Is TOEFL ITP acceptable to AIT?

NO, it is not. We only accept Paper Test, CBT and IBT.

Fees and Costs

1. How much is the application processing fee?

The processing fee is Baht 800 or US\$25, non-refundable.

Online application form:admission.ait.ac.th/aoas/Applicant/FirstPage.aspx

2. How should I pay the application processing fee?

It must be sent together with your application. Payment must be received in order for your application to be processed. After the submission of your online application, there is option to pay the processing fees through online credit card. The other mode of payment is also available.

3. Can I pay the online application processing fee using credit cards?

Processing Fees (US\$25 or Baht 800) can be paid online using credit card (Visa, MasterCard, and American Express.) before submitting the application online or through your friends in Thailand.

Fees can also be paid through western union, in this regard, please write toadmissions@ait.ac.thfor further details.

If you are not able to pay online or western union, payment can be made through bank transfer to AIT bank account. Once the payment is done through bank transfer, please send the bank transaction detail toadmissions@ait.ac.thto process your application internally.

Bank account details:

Bank Name: Siam Commercial Bank, Thailand

Bank account name: Asian Institute of Technology

Bank current account number 468-046301-2 or (please use this account for those transfer from oversea)

Bank savings account number 405-999567-0 (please use this account for those transfer inside Thailand)

Bank SWIFT Code: SICOTHBK

Bank address: 95 Moo 8, Klong Nueng, Klong Luang, Pathumthani 12120, Thailand

If you would like transfer through Western Union Payment. Please send an email to Admissions officeadmissions@ait.asiato request the details.

4. Can the application processing fee to be waived?

No, it cannot. After submitting the application, the applicant must pay the application processing fee.

5. How much does it cost to study at AIT?

The different program of study costs is in this site: <https://ait.ac.th/tuition-and-fees/>

6. If I apply and accepted this intake, can I defer to the next intake with the same condition?

Yes, you can defer your entry until the next academic semester. However, the financial conditions of the admission may change depending on the competitive assessment for the next semester. You are also required to pay the application processing fee to reactivate your admission.

Financial Support

1. Do you offer financial support? How do I apply?

Yes, we have various forms of financial packages available to highly-qualified applicants from funds granted by donors as well as from AIT itself.

Please check this site: [Scholarships](#)

2. Are there scholarship grants available for international students to apply for?

Yes, AIT offers a limited number of financial awards in the form of scholarships for the Master's and Doctoral programs, on a highly competitive basis, to applicants who have been evaluated as outstandingly qualified for admission.

For details, please go to [Scholarships](#).

3. Can Flexible Master or Doctoral Program receive full financial support?

No, our target audience for the flexible programs are the working people, who are not able to join full time students on campus. Offering of AIT Scholarship for flexible programs are on a very competitive basis.

Deadlines

1. When is the school intake and the application deadline?

The AIT academic year consists of two semesters: January and August for [Faculties – Asian Institute of Technology](#).

For [School of Management](#), the academic year consists of five terms: January, March, June, August and October. For more details on specific application deadlines, please visit the [Admission Deadline](#) website.

2. If I apply and accepted this intake, can I defer to the next intake with the same condition?

Yes, you can defer your entry until the next academic semester. However, the financial conditions of the admission may change depending on the competitive assessment for the next semester. You will have to pay the application processing fee to reactivate your admission.

3. I am in final year of bachelor degree; can I apply for the Master Degree?

Yes, please be sure that you will graduate before the classes begin and the original documents must be shown to the Admissions Office before enrolment.

Services and Facilities

1. Is the pick-up service from the airport free of charge?

Pick-up service from the airport is free of charge if arrival is during the arrival period mentioned in the offer letter. The pick-up service is provided by the Student Union. If arrival is not within the set arrival period, you have to arrange your own transportation from the airport to AIT. For details, please refer to [Guidelines](#).

2. Should I take a computer with me?

You are encouraged to have your own personal computer. All classrooms & dormitory rooms are provided with link to the AIT local area network LAN and Wifi.

3. I am not a Thai citizen. If accepted will you assist my visa arrangement?

Yes, AIT will assist in arranging for your Educational Visa (ED), through the AIT Government Relations Unit including extension of your ED plus Visa till you complete your study.

4. Do students have Medical Insurance?

Yes, AIT has a standard insurance plan which covers certain costs of hospitalization, outpatient treatment, dental and personal accident but not major medical expenses. For details of the insurance please check student welfare website. [Health & Wellness – Asian Institute of Technology](#)

5. Do you have campus accommodation?

Yes, AIT offers on-campus accommodation on a limited basis. In case on-campus accommodation is not available, you may choose to live off-campus. AIT Accommodation office will provide assistance for off-campus accommodation. Email: accommodation@ait.ac.th Tel: +66-524-5093

Website: <https://ait.ac.th/student-housing/>

6. Am I allowed to move out before the end of the housing contract?

Yes, as long as all financial obligation has been settled.

7. Am I allowed to stay outside the campus without Institute assistance?

Yes. Once enrolled and usually with second semester onwards, you may request a written permission from the School Dean and the Director of Office of Student Affairs to live off campus on your own.

8. Do I have to buy my own bed sheets and pillowcases?

Most dormitory units provide bedding set. You may like to bring or buy extra upon arrival from nearby shopping areas. However, students who will avail of married accommodation and Category 2 units are required to provide their own linens.

9. Are there any convenience stores on campus?

There are several convenience stores on campus where you can get most basic supplies for daily living such as 7-Eleven, but quality and choice may be limited and prices higher than in local markets. Additional shops are located in the AIT Arcade, specifically a bakery, a shop that sells snacks and toiletries, clothing and souvenir stores, a book and stationery shop, salon shops, a tailor and an IT shop. <https://ait.ac.th/facilities/>

10. What kind of food AIT serves?

The AIT Cafeteria on campus serves Asian, Halal, Western, Thai, and Vegetarian dishes. It is open from 7:00 a.m. to 9:30 p.m. where you can find Minimum cost meals worth 50 – 60 Baht. At SU Snack food vendors sells Halal dishes. It is open from 8:00 a.m. to 11:00 p.m. There are also a number of coffee shops in different academic buildings which are open during office hours, from 7:30 a.m. to 4:30 p.m. and Kiosk shops available for specific types of food around the campus which are open till 8:30 p.m. We have also convenience store (7-Eleven) which are open 24 hours a day. Students, however, should not always expect to be able to obtain food of exactly the kind they are used to.

11. Am I allowed to work in Thailand?

As per Thai government, the Non-Immigrant ED Plus visa allows foreign students to work while they study. However, our students are encouraged to discuss with the advisers as study should be first priorities and complete on time.

On campus, AIT students are allowed to work as a Student Assistantship on the AIT campus as Research/Teaching/Administrative Assistance, as per AIT policy.

12. I am married. Can I bring my family during my study at AIT.

Students, who are married and wish to bring their families to AIT, need to submit a copy of passport and a copy of marriage certificate or evidence to support the marital status. These documents must be attested by your Ministry of Foreign Affairs and then by Local Thai Embassy at your home country. Please be advised that no spouse or family member is allowed on-campus accommodation until availability of married unit has been confirmed in writing by the student Accommodation Officer.

Please also note that under the Thai Immigration Laws, no dependents of Non-Thai AIT students are permitted to work outside AIT under a dependent (Category O) visa. For further inquiries on student accommodation, please contact the Student Accommodation Unit at e-mail: accommodation@ait.asia, Tel: (66-2) 524 5093.

13. What sport facilities you have on campus?

AIT offers many opportunities for on campus sports activities including golf, swimming, basketball, badminton, tennis, table tennis, volleyball, football, cricket, hockey, running, squash and petanque. A multi-purpose field, more popularly known as the cricket field, squash courts, tennis courts, badminton courts, a basketball court and running track of several km lengths are all located on the AIT campus.

14. I heard, AIT has a golf course, is that true?

Yes, that's true. AIT has a beautiful 9 holes golf course on 20 hectares land with large old trees, lakes and with a diverse wildlife.

Campus Location

1. How to reach AIT for a campus visit?

For details, please click [Visit](#).

Student Union

1. How can I contact the Student Union?

For details, please visit: <http://www.su.ait.ac.th>

Contact: supresident@ait.ac.th Tel: +66-2524-5979

Re-application

1. I wish to reapply what is the procedure?

In order to reactivate your application, you have to pay again an application processing fee and send the receipt toadmissions@ait.ac.th. No need to submit a new application.

2. Can I reapply and change the school and academic program?

Yes, you can. Please emailadmissions@ait.ac.th for the change of academic program and also attached receipt of your payment for the application fee.

Upon Enrolment – Academic Issues

1. Does the Institute apply the class attendance system?

All students are expected to attend their classes as per the semester class schedules.

2. Will I get a certificate or transcript at the end of the semester?

Yes. Certification or transcript will be provided upon request with the fee of 100 Baht.

3. Do you accept transfer of credits?

For certain joint degrees and exchange programs, the Institute allows credit transfer (but not grade transfer) as stipulated in the agreements signed with partner universities.

4. Do I have to wear uniform?

Students are not required to wear any uniform. Please note that the climate in Thailand is generally hot & humid. Light clothing is recommended. However, students are expected to wear semi-formal/casual attire in class.

Guidelines for Applicants who were Offered Admission

Admission to AIT

a. AIT Offer of admission

b. Applicant confirms acceptance of the offer of admission:

(i) Acceptance of Admission (ii) Financial Assurance Form (FAF) (iii) Academic and Financial Acceptance Form (AFAF) (iv) RTG Declaration Form for those awarded with the RTG Fellowships and Royal Thai Government Scholarships (v) In case of admission with a scholarship, the Notice of Financial Support Form (NOF) and other required documents are mentioned in the offer letter. (vi) Certificate of Health: New students must submit the medical certificate two weeks before enrollment.

c. AIT Certificate of Admission

Important:

- The conditions of the offer of admission are non-negotiable and cannot be changed after you enroll at AIT.
- Please note that applicants from outside Thailand must not proceed to Thailand without the confirmation of admission, and particularly without the proper ED visa approval from the Thai Embassy.
- All students enrolling for the degree programs (diploma, master's & doctoral) should bring their original/attested Bachelor's & Master's transcripts from the 1st to the final year and present these documents to the Admissions Unit, Office of Student Affairs, ground floor Administration Building for verification.
- Exchange and Visiting students are requested to present their original transcripts and degree certificates, along with a letter from the university authorizing their presence at AIT as an Exchange or Visiting student.
- Providing false documents or information is a ground for dismissal from the Institute.

1. Passports

- Apply for a passport at once if you do not have one yet, and make sure it is valid for the entire stay at AIT. Must travel to Thailand on a valid passport; if the passport is not in order, you will be sent home immediately. AIT cannot, under any circumstances, assist at the airport if the documents are invalid.
- All applicants must have a Personal or Ordinary Passport (not an Official Passport or Diplomat Passport) when applying for an “Educational Visa (ED)” from the Thai Embassy in their home country to study at AIT.

2. Visa Matters

Group I	Group II	Group IIA	Group III
Nationals of all other countries not mentioned in the following columns	will require an MOFA code (without a police clearance certificate)	will need to be checked with the Thai National Intelligence Agency	
		Nationals of Afghanistan, China, and Iraq	
will receive a telex number from GRU/Office of Thailand Affairs(OTA) a visa authorization letter issued by the Ministry of Foreign Affairs (MOFA) of Thailand, which is also dispatched to the respective Royal Thai Embassy or Consulate via diplomatic channel.	Nationals of Bangladesh, Colombia, Ecuador, Iran, Kuwait, Mexico, Pakistan, Sri Lanka, Trinidad and Tobago, and most of the African countries	will be required to obtain a Police Clearance Certificate (PCC) to present to the Royal Thai Embassy or Consulate in the country they are in when they apply for their “ED” visa (3-month validity). If the local Thai embassy requests, the AIT Education License + supporting documents of the Coordinator of Admissions and Scholarship office (copy of AIT’s authorized person’s passport, his/her work permit, and AIT ID card) can be obtained from the Admissions office.	Nationals of Cambodia, Mongolia, Vietnam
Group I	Group II	Group IIA	Group III
will receive a visa letter issued by Admissions / Office of Students Affairs(OSA) to apply for an education visa “ED.”	Please refer to the process for Group I below		
Will be required to obtain a Police Clearance Certificate (PCC) to be presented to the Royal Thai Embassy or Consulate in the countries they are in when they apply for their “ED” visa (3-month validity). If the local Thai embassy requests, the AIT Education License + supporting documents of the Coordinator of Admissions and Scholarship office (copy of AIT’s authorized person’s passport, his/her work permit, and AIT ID card) can be obtained from the Admissions office.	The visa authorization will normally be approved 2-3 weeks after issuance of the Certificate of Admission.	The visa authorization will normally be approved up to two months after issuance of the Certificate of Admission.	The visa authorization will normally be approved 2-3 weeks after issuance of the Certificate of Admission.
	Please refer to the process for Groups II and IIA below	AIT Education License + supporting documents of the Coordinator of Admissions and Scholarship office (copy of AIT’s authorized person’s passport, his/her work permit and AIT ID card)	
will be required to obtain a Police Clearance Certificate (PCC) to present to the Royal Thai Embassy or Consulate in the country they are in when they apply for their “ED” visa (3-month validity). If the local Thai embassy requests, AIT Education License + supporting documents of the Coordinator of Admissions and Scholarship office (copy of AIT’s authorized person’s passport, his/her work permit, and AIT ID card) can be obtained from the Admissions office.	Please refer to the process for Group III below	will be required to obtain a Police Clearance Certificate (PCC) to present to the Royal Thai Embassy or Consulate in the country they are in when they apply for their “ED” visa (3-month validity). If local Thai embassy request, AIT Education License + supporting documents of the Coordinator of Admissions and Scholarship office (copy of AIT’s authorized person’s passport, his/her work permit and AIT ID card) can be obtained from Admissions office.	

- Contact the nearest Thai Embassy or Consulate (in person, by letter, or download from the local Thai Embassy website) and request application forms for a non-immigrant visa for educational purposes (ED).
- Since the beginning of 2025, the Thai government has initiated a new visa application process to make it easier. Please apply through the E-Visa platform: Official Website of Thailand Electronic Visa and please select the studying visa and select "bachelor's degree or higher"
- Submit your passport with your visa application (attach all required documents) to the Thai Embassy or Consulate as soon as possible to process it in time.
- Please apply for a non-immigrant visa (code "ED plus" for degree programs and ED for special programs: Exchange and visiting students); please do not apply for a tourist visa.
- In your passport, you must have an "ED plus" type visa for a degree program and an "ED" type visa for the special degree program: exchange and visiting students. If you come with another type of visa, such as an official "F" or Tourist "T," upon arrival, you will be sent back immediately to your home country to obtain a proper educational visa to travel to Thailand, i.e., an "ED" Visa.

Group I:

- Please show the AIT visa request letter and AIT Certificate of Admission as proof of purpose in coming to Thailand. Some Thai embassies may also request the AIT offer letter and proof of your 1st-semester tuition and fees at AIT.

Group II (and IIA):

- Submit your passport with visa application (attach all required documents, including police clearance certificate; also see group III below) to the Thai Embassy or Consulate as soon as possible so that it can be processed in time.
- Please show a copy of the visa authorization letter or telex number issued by the Ministry of Foreign Affairs (MOFA) of Thailand received from GRU/OTA and AIT Certificate of Admission as proof of purpose in coming to Thailand. Some Thai embassies may also request the AIT offer letter and proof of your 1st-semester tuition and fees at AIT.

Group III:

- Please show a copy of the visa authorization letter issued by the Ministry of Foreign Affairs (MOFA) of Thailand received from GRU/OTA and AIT Certificate of Admission as proof of purpose in coming to Thailand. Some Thai embassies may also request for the AIT offer letter and proof of your 1st-semester tuition and fees at AIT.

3. Application to Enter Thailand

Visa application form to enter Thailand at the Royal Thai Embassy or Consulate General in your home country must be made at least 10 business days before the date of intended departure or at the time of obtaining an Educational visa "ED plus" visa (see 2. Visa Matters above). The application should include copy of a valid "ED" visa issued to study in Thailand.

According to the announcement by the Thai Immigration Bureau, effective May 1, 2025, all non-Thai nationals entering Thailand via air, land, or sea are required to complete the Thailand Digital Arrival Card (TDAC) online prior to arrival.

User Guide: TDAC Registration Manual; When to Register: Within 3 days before your arrival; Apply Here: <https://tdac.immigration.go.th>

4. Health/medical requirements before joining or returning to AIT:

- Category 1: continuing students residing on campus — will be required to undergo a health checkup at the AIT Medical Center
- Category 2: new and continuing students from overseas must bring their medical certificate issued by the recognized medical Doctor by the local Government.
- Category 3: new and continuing students in Thailand residing off-campus must bring their own medical certificate.

5. Other Documents

- Please bring your original transcripts, degree certificate and other documents to cross check or for verification the originality of your submitted documents during the registration/enrollment period.
- Please have an extra copy of the Offer Letter and Certificate of Admission, and Certificate of Enrollment/Student Certificate, for visa renewal purposes upon arrival.
- For non-Thai students, four additional photos (size 4 x 6 cm with white background: no T-shirt) must be submitted to the Government Relations Unit for the extension of your educational visa after two weeks upon arrival. Please write your full name, AIT School, and Nationality at the back of all photographs.

Flight details

Please communicate your flight details toaccommodation@ait.ac.th soon as this is available. Also fill up your flight information in the google form

Note: All applicants must have a Personal or Ordinary Passport (not the Official Passport or Diplomat Passport) when applying for an "Educational Visa" from Thailand Embassy in your home country to study at AIT.

Medical Report

- You must submit a satisfactory physical and mental health report prepared by a qualified physician recognized by the local government and written in English.
- Please ensure that the certificate of health reflects your true medical condition. Making false statements or concealing information regarding your medical condition will make you liable for all expenses to be incurred in case medical treatment will be required during your stay in AIT and is also a ground for dismissal from the Institute.

Note: Certificate of Health must be submitted at least 2 weeks prior to enrollment.

Arrival at the Airport and AIT

Please take a taxi from the airport to AIT-Thammasat Rangsit, which cost about 800-1000 Baht; from Suvarnabhumi airport to AIT or 300-500 baht from Don Muang airport to AIT. Upon arrival at the AIT main gate, please request our security guard for the accommodation office so that officer at the accommodation office can provide you the room key. Please do inform your arrival date and time by sending mail toaccommodation@ait.ac.th as well as fill up the google form. For the AIT location map, please visit the AIT website: <https://ait.ac.th/contact/>

Official pick-up dates for new incoming students coming from overseas is from 01 to 03 August 2026 (For August 2026 intake). In this regard, please make sure you have filled out a Google form with your arrival date and time. Please do specify the airport name, as there are two airports in Bangkok (Suvarnabhumi and Don Muang). Our Student Union (SU) team will be at the airport to pick you up. Our SU team will be in touch with you to provide more guidance. At the same time, our Accommodation Office will reserve a room for you on campus and allocate the room to you upon arrival at the AIT campus at any time. You may also email the accommodation office before your flight takes off to Thailand (accommodation@ait.asia and cc_tosuaaccom@ait.asia)

All new students will be allocated on-campus accommodation without having to queue.

6. Registration

For new students who are in Thailand: Registration and Payments

Please find below the guidelines for the registration process for the Fall (August) and Spring (January) semesters:

- New students in Thailand are requested to come to the Admissions Unit to register in person starting from 27 July 2026 (note: 28 and 29 July 2026 are official holidays in Thailand) for the August Intake, and from 3 Jan for the January Intake. Please bring the required original documents, such as transcripts and degree certificates, including your medical certificate, to the Admissions Unit of the Office of Student Affairs (OSA).
- If payment for the first-semester fees has been made by bank transfer (see the bank account details here), please submit the bank transaction details to the cashier and obtain an AIT official receipt. The semester fees include Tuition Fee, Registration Fee, Language Support Fee, Medical Insurance, SU Fee, and Student ID Card (Please refer to your Financial Assurance Form). Please also email a copy of your bank transaction details to the Scholarships & Invoicing Unit ataso@ait.ac.th
- The Scholarships & Invoicing Unit will endorse your documents to the Registry to process your ID Card, and you can then obtain your username/password to access the SIS (Student Information System).
- Please scan the QR code below or fill up the form for your student ID card.

For new students who are overseas: Registration and Payments

Please find below the guidelines for the registration process for the Fall (August) and Spring (January) semesters:

- For new students who are in their home countries and are unable to arrive at AIT on time, a Program staff from your Academic Program at AIT will collect from the Admissions and Scholarships Unit (ASU) your user ID and password to access Student Information System (SIS). Program staff will provide you the user ID and password.
- The Academic Program staff will facilitate and guide you in registering for your Fall courses (SIS-online), as well as in your attendance in the online hybrid classes (case by case basis) in case you are not able to join on campus on time because of some personal reasons or late admission or delay in visa procedural.
- Students who have already made payments for the first semester fees, are requested to send the scanned copy of the transaction details or bank transfer receipt toaso@ait.ac.th and thoraso@ait.asia and copy toprateep@ait.asia. You will be issued a receipt of acknowledgment through email. There may be difficulty in transferring the funds on time due to restrictions at your home country or current location. If so, please contact the Admissions and Scholarships Coordinator, Dr. Tenzin Rabgyal (tenzin@ait.ac.th and tenzin@ait.asia).
- Please scan the QR code below or fill up the form for your student ID card.

Note: All courses for the January and August semesters will be offered in-person

7. Orientation The Orientation program for new students for August Intake (04 August 2026) and January Intake (05 January 2027) intakes will be at the Robert B. Banks Auditorium in the AIT Conference Center. The Orientation program will also be conducted online via live streaming for

students who are unable to attend in person. Detailed instructions and other information will be provided three weeks before enrollment.

8. Medical Insurance

- All new students are required to take mandatory standard medical insurance offered by AIT Partners. The details are in the standard plan, which covers certain costs of hospitalization, outpatient treatment, treatment for COVID-19, dental care, and personal accidents but not major medical expenses.
- The initial premium for the August semester intake (for 5 months) is approximately Baht 1,250, to be renewed in the January semester of the following year; for students studying in January and August semesters, the annual premium is approximately Baht 2,500.
- Students receiving AIT scholarships must consult the Admissions and Scholarships unit if their donors have provisions for such.
- The Institute accepts no responsibility for medical expenses on or off campus incurred by students' spouses, children, or other relatives.

9. Notes to Students on Fellowships/Scholarships:

- Students on AIT scholarship must note that the conditions of the award are not negotiable.
- The scholarship bursary is only a contribution towards the cost of books, food and miscellaneous expenses. Thus, some students may find it necessary to supplement this allowance from their own funds. The bursary is provided about three weeks after registration upon submission of your bank account (Kasikorn Bank or Siam Commercial Bank, near AIT campus, Thailand). You can open your bank account any of this bank upon arrival. Scholarship recipients are therefore advised to bring personal funds of at least US\$ 300 to cover the expenses for the first three weeks at AIT.
- Students on other funding categories (Self-Support, Externally Supported/ Sponsored): The certified and signed Financial Assurance Form with additional certification or evidence of financial support must be submitted to AIT as part of the documents required for enrolment. You will not be allowed to register for enrolment if these documents are missing.
- In accepting the offer, the first semester fees must be paid prior to your arrival at AIT. The deadline for advanced payment is during the orientation day or the first day of the semester, otherwise, registration will not be allowed. Late payment is subject to a 1.5% per month interest penalty
- Tuition and registration fees are charged per semester and fixed in Thai currency (Baht). However, for convenience, payment can also be made in US Dollars at a rate that is quoted in advance for each semester and valid for the duration of that semester. Though the amount in Thai Baht is fixed during the duration of the study program, the equivalent amount in US Dollars may change in subsequent semesters. Students are free to choose to pay in either Thai Baht or USD currency.
- With regard to bank remittance or bank transfer, please indicate the details in the bank advice to facilitate identification of the payment so that it can be recorded immediately in the AIT accounting system. Please visit the AIT admissions website for updates or announcements on payment policies and study fees. For further enquiry on payment, you may also contact AIT Finance Dept. Tel. no. (66-2) 524-5055 (E-mail: jhozine@ait.asia).
- Opening a Bank Account

There is a local bank near campus, Kasikorn Bank or Siam Commercial Bank. A minimum fee deposit of about Baht 500 is required to open a savings account and another Baht 650 for a Debit Card. To open your bank account, you need to submit the Student Certificate and Student ID + copy of your passport. Student Certificate and ID card can be obtained once you complete the registration.

• Children's Education

The AIT International School teaches children up to grade 6. Students' children will, however, be admitted only if the concerned parent has a written permission for the children to be with him/her on campus. Children of students can avail of 50% subsidy for their children's education. For more details on the AIT International School, please visit their website

- Climate: The climate of Thailand is generally hot and humid. The hottest months are March and April, and the rainy season is from May to October.

Orientation

New students are required to attend the following events to be properly oriented with life in AIT

EVENT	DATE	VENUE
Institute-wide Orientation Program Schedule	04 August for the August 2026 Intake 05 January for the January 2027 Intake	Robert B Banks Auditorium
Schools' Orientation Program Schedule	05 to 11 August for the August 2026 Intake 06 to 11 January for the January 2027 Intake	Respective Schools

PAGE: Agri-Business Management (ABM) – Asian Institute of Technology

URL: <https://ait.ac.th/program/agri-business-management/>

Agri-Business Management (ABM)

Agriculture plays a vital role in the economic development of a majority of developing countries. Moreover, agriculture is the provider of food and feed to the world. The agro-industries are also contributing to the growing industrialization of developing countries leading to the increasing importance of agri-products. The development of agribusinesses is also influenced by trade policies. Thus, the management of agribusinesses requires a holistic skill set to navigate challenges posed by the inherently unpredictable nature of agricultural products and government policies. Agribusiness management has far-reaching consequences for many sustainable development goals, including but not limited to SDG1 (no poverty), SDG2 (zero hunger), SDG3 (good health and well-being), SDG5 (gender equality), SDG6 (clean water and sanitation), SDG8 (decent work and economic growth), SDG9 (industry, innovation, and infrastructure), SDG12 (responsible consumption and production), SDG13 (climate action). Thus, there is a need for sustainable transformation of agro-food enterprises which requires a new breed of agribusiness managers. Hence, the agribusiness management program at AIT caters to the unique needs of agribusiness professionals by equipping them with the knowledge and skills required to excel in globally competitive agro-industries. The agribusiness managers trained at AIT are market-ready to enhance the performance of small, medium, and large-scale enterprises. Agribusiness Management also aims at enhancing entrepreneurship among primary producers of agri-food products, and traders and other market intermediaries in the value chain.

FOCUS AREAS

- Agribusiness Development
- Agricultural Sector and Policy Analysis
- Agri-Food Value Chain Management
- Agro-Industrial Systems Development
- Climate Smart Agriculture and Food Security Contributions of Agribusinesses
- Food Safety, Food Waste, and Standardization
- Innovations and Entrepreneurship in Agribusinesses
- Risk Management in Food Marketing Channels
- Sustainable Agro-Food Systems
- Sustainability Assessment of Agro-Industries

PREFERRED BACKGROUND

The applicant should hold a Bachelor's degree in an appropriate field of study (for Master's program), and Masters's with coursework and thesis study (for Ph.D.). Eligible undergraduate degrees include: Agricultural Sciences, Environmental Sciences, Management Sciences, Social Sciences, or other relevant degree programs.

Minimum GPA – 2.75 or equivalent at Bachelors level (for Master program) and 3.5 or equivalent at Masters level (for Ph.D.).

COURSE STRUCTURE

Course Code	Course	Number of Credits	Description/Course Objective	Semester
ED80.03	Agribusiness Management: Principles and Practices	3	Agriculture has traditionally been viewed as a subsistence activity. This perspective is rapidly changing due to globalization of commercial food markets. Agribusiness management, bearing multi-disciplinary characteristics, covers aspects of policy, finance, technology and entrepreneurship. The course will provide a broad overview of agribusiness management and will introduce various contemporary issues in terms of their influence on agribusiness development. Furthermore, this course aims to equip students with theoretical principles of management, its functions, and its practical applications.	Aug Sem

Course Code	Course	Number of Credits	Description/Course Objective	Semester
ED80.04	Safety and Standardization of Food Products	3	To provide the students with knowledge on the need for greater quality assurance, standardization and traceability in the food systems. The course emphasizes food quality control as the mechanism for the prevention of food-borne illness and food spoilage at the “farm-to-fork” level.	Aug Sem
ED80.05	Agri-Food Supply Chain Management	3	This course provides broad knowledge of various management issues related to food supply chains, including farm level production to post-harvest management. The course discusses functioning of each sector of food supply chains and how these sectors can be coordinated and integrated to ensure availability of safe food.	Jan Sem
ED80.07	Marketing Management and Trade Policies in Agribusiness	3	This course provides students with marketing management skills and exposes them to issues of trade policies in agribusiness. It also examines how the issues of trade policies and marketing can be managed effectively.	Aug Sem
ED80.08	Applied Managerial and Agribusiness Economics	3	This course provides students with marketing management skills and exposes them to issues of trade policies in agribusiness. It also examines how the issues of trade policies and marketing can be managed effectively.	Aug Sem
ED80.09	Agro-Industrial Development	3	The objective of this course is to provide the framework and strategies of establishing and operating enterprises in the agro-industry for development. The interactions among raw material supply, processing, factors affecting site selection and layout for retail, wholesale and processing enterprises will be important aspects of this course.	Jan Sem
ED80.10	Statistical Methods for Research in Agribusiness	3	This course provides students with statistical techniques and useful skills for collecting, designing, analyzing and interpretation of data that can be used in the research and decision making process in agribusiness environments.	Jan Sem
ED80.11	Analytical Techniques and Decision Tools for Agribusiness	3	Sound understanding and working knowledge of decision making techniques and tools are important in agribusiness management. This course provides understanding to quantitative decision-making methods for effective agribusiness management in resource allocation, scheduling, risk analysis, and forecasting. Emphasis is given to problem identification, model formulation and analysis, and interpretation of results under multiple criteria decision making conditions.	Jan Sem

Minor details : The following courses have been identified to be offered as ‘Minor’ in the ABM Academic Program

Course code	Course title	Credit	Semester
ED80.03	Agribusiness Management: Principles and Practices	3(45-0)	August
ED80.07	Marketing Management and Trade Policies in Agribusiness	3(45-0)	August
ED80.09	Agro-Industrial Development	3(45-0)	January
ED80.10	Statistical Methods for Research in Agribusiness	3(45-0)	January

Climate Change and Sustainable Development (CCSD)

Area of Specialization under theClimate Change, Disaster and Urban Sustainability (CCDUS)Program

To visit the academic program page,click here

Climate Change and Sustainable Development (CCSD) Program at AIT is designed to produce professionals capable of assessing, finding options and delivering them for low carbon and climate resilient development. We offer Certificate, Master’s and Doctoral degrees, and provide opportunities for students to specialize in specific or sectoral topics, such as energy, agriculture-land-use-and-forest, water, infrastructure, disaster, development, policy, financing etc.

The program is also tailored to conduct cutting-edge and solution-oriented research in climate change in an interdisciplinary setting. Our research focuses on low carbon and climate resilient communities, greenhouse gas accounting, technology needs, climate policy assessment, climate financing, disaster and risk management, impact and adaptation to climate change in water, land, agriculture, and their nexus.

Science has said that the stabilization of global climate change is possible and we “can” substantially reduce the risks imposed by climate change. This requires new knowledge and consolidated actions. We thrive to develop next-generation climate leaders ready to take on these challenges and take-on new research frontiers to build a better knowledge base and facilitate actions.

Focus Areas

- Climate Change
- Sustainable Development
- Climate negotiation
- Climate finance
- Climate change mitigation
- Adaptation to climate change
- Carbon policy and market
- Climate impacts and vulnerability
- Climate-resilient society
- Climate smart

Preferred Background

Bachelor’s degree in science, engineering, social science, humanities, or management.

Course Structure

Course Name	Credits(Lecture hrs. – Lab hrs.)	Course Type	Semester Offered
Introduction to Climate Change and Sustainability	3(45-0)	Required	August

Climate Change, Disaster and Urban Sustainability (CCDUS)

Introduction / Background

The CCDUS program encompasses interdisciplinary knowledge across climate science, climate change mitigation and adaptation, disaster risk assessment and management, urban systems, policy, social dimensions, and governance. Graduates of the program will be equipped to address complex climate and disaster challenges, particularly in climate-resilient urban development, disaster preparedness and risk reduction, low-carbon and inclusive cities, and sustainable urban transformation across diverse socio-economic and geographical contexts.

The main goal of the CCDUS program is to prepare students to confront emerging global challenges related to climate change, disasters, and urban sustainability through state-of-the-art knowledge, analytical tools, and applied research skills. The program aims to develop future leaders and practitioners capable of delivering solution-oriented, evidence-based, and socially inclusive strategies that support resilient cities, effective disaster governance, climate adaptation and mitigation, and sustainable development pathways for human and environmental well-being.

Areas of Specialization

- Climate Change and Sustainable Development
- Disaster Preparedness, Mitigation and Management
- Urban Innovation and Sustainability

Focus Areas

- Climate Change
- Sustainable Development
- Climate negotiation
- Climate finance
- Climate change mitigation
- Adaptation to climate change
- Carbon policy and market
- Climate impacts and vulnerability
- Climate smart and resilient society

- Disaster Risk Reduction Resilience
- Community Based DRR
- Risk-Knowledge Networking
- Economics of Disasters
- Multi-hazard Risk Assessment
- Earthquake Disaster, Floods, and Droughts
- Disaster Risk Governance
- Urban Planning and Design
- Urban Climate Solutions
- Urban Sustainability Design
- Eco-Innovation and Cities Circular Economy
- Sustainable Urban Development
- Digital and ICT innovation for Built Environment
- Urban Resilience Planning

Preferred Background

Bachelor's degree in science, engineering, social science, humanities, or management.

Course Structure

3.5-year Doctoral degree program:

- Option-1: 12 credits elective courses + 72 credits dissertation research
- Option-2: 9 credit elective courses + 3 credit special study + 72 credit dissertation research

Two-year master's program:

- Thesis option: 3 credits required courses + 23 credits elective courses + 22 credits Thesis
- Research study option/ Internship option: 3 credits required courses + 33 credits elective courses with a maximum of 1-3 credits special study + 12 credits Research study/12 credits Internship
- Minor option from other academic program: 3 credits required courses + 21 credits elective courses+ 12 credits course from other academic program + 12 credits Research study
- Minor option in CCDUS: 12 credit courses from the CCDUS program (3 credit required courses + 9 credit elective courses)
- Exchange option: 24 credits courses at AIT+ 12 credits of courses at partner universities + 12 credit research at AIT

One-year Master's program:

- Only courses option: 3 credits required courses + 27 credits elective courses
- Project option: 3 credits required courses + 21 credits elective courses + 6 credit project/special study

One-year Diploma: 3 credits required courses + 21 credits elective courses

URL: <https://ait.ac.th/program/data-science-and-ai/>

Data Science and AI (DSAI)

Area of Specialization under the Computer Science and Communication Technology (CSCT) program

Data Science (DS) is concerned with the extraction of useful knowledge from data sets. It is closely related to the fields of computer science, mathematics, and statistics. It is a relatively new term for a broad set of skills spanning the more established fields of machine learning, data mining, databases, and visualization, along with their applications in various fields. In 2012, Harvard Business Review called data science “The Sexiest Job of the 21st Century”.

Artificial Intelligence (AI) is the broad field conceived in 1956 as the automation or simulation of human intelligence. AI has two primary “levels”. The first level, “narrow AI”, concerns perception, statistical inference, and actuation, drawing on data science, sensors, and robotics. The second level, sometimes called “artificial general intelligence (AGI)”, is concerned with more complex or flexible reasoning and decision-making in less constrained domains.

The AIT Masters in DS&AI was designed in partnership with the Erasmus+ DS&AI consortium, a group of 15 European and Asian universities with the mission of bringing European-standard advanced education to Asia.

Program Brochure [Download](#)

Research Focus Area

- Data modeling and management
- Machine learning
- Data mining
- Data science
- Sensors
- Robotics
- Software development
- Artificial intelligence
- Big Data and Deep Learning

Preferred background

To study in the DS&AI field, the students should fulfill one of the following backgrounds.

- Computer Science/Computer Engineering/ICT.
- Engineering background with work experience, mathematical skills, and programming skills.
- Diverse backgrounds such as business, finance, or other non-engineering fields. Candidates must take a foundation course in calculus, discrete mathematics, linear algebra, and basic computer programming.

Course Structure

Major in DS&AI

Master of Science/Master of Engineering in Data Science and Artificial Intelligence.

Development and Sustainability (DS)

To visit the academic program page, click [here](#)

To offer a generalist master's program based on an interdisciplinary approach to international sustainable development. The aim is to build upon shared expertise in the Department of Development and Sustainability (DDS) and offering an academic program that has a broader scope than current academic offerings, which are very specialized. A broader and less specialized program will be especially attractive to institutions looking for managers with a broad knowledge of development issues, and candidates who may not want to narrow their academic and research skills but rather get a broader understanding of development issues in the region.

The program also responds to the needs for capacity building regarding the United Nations Sustainable Development Goals (SDGs) in the Asian region and beyond in ways these other programs do not since the concept of sustainability calls for expertise in both the environmental and social dimensions of long-term development.

FOCUS AREAS

- Sustainable Development
- Environmental Sustainability
- Social Sustainability
- Poverty Reduction
- Social Development
- Gender and Development
- Interdisciplinary Approach
- Industry and Innovations
- Sustainable Communities
- Life-long Learning

Disaster Preparedness Mitigation and Management (DPMM)

Area of Specialization under the Climate Change, Disaster and Urban Sustainability (CCDUS) Program

To visit the academic program page, [click here](#)

Disaster Preparedness Mitigation and Management – recent intense occurrences of disasters all over the earth leading to massive loss of life and destruction of infrastructure have grabbed the attention of the world. Receiving less attention is disaster risk management – the know-how to prepare for such disasters and to reduce their effects. The academicians and practitioners at AIT, and its partner institutions are determined to contribute more toward bringing this know-how to disaster managers and engineers. The aim of this academic program is to instill the necessary interdisciplinary capacities to manage and minimize the effects of disasters in people on the front lines of disaster response and applicants with engineering, architecture, natural and social science, as well as management backgrounds.

Program Video

Focus Areas

- Disaster Risk Reduction Resilience
- Community-Based DRR
- Risk-Knowledge Networking
- Economics of Disasters
- Multi-hazard Risk Assessment
- Earthquake Disaster
- Floods and Droughts
- Disaster Risk Governance
- Early Warning System
- GIS and Remote Sensing for DRR

Preferred Background

Certificate

This program is designed for those with interest in disaster-related activities. Students can transfer the credits to professional masters or regular master degree program in DPMM as well as to programs in appropriate fields of study. Bachelor's degree is the minimum requirement of the course.

- Professional Master's Degree

Those who are currently working in disaster-related institutions, and would like to expand their knowledge base to meet the present and future performance challenges are the target group of this degree. Credits earned in this degree can be transferred to regular master degree program in DPMM if the requirements are met.

- Master's Degree

The target groups of the Master's Degree Program are those who are looking for a career in disaster preparedness, mitigation and management, along with the faculty and staff of universities and research institutions. After completing the Master's Program, students have the advantage of doing further studies in the doctoral program in DPMM.

- Doctoral Degree

Faculty and staff of universities, researchers, senior staff of government and international agencies, and NGOs/INGOs are the appropriate candidates for this program.

Dual Degree Master's Program with Telecom Sud Paris (France)

AIT and Telecom SudParis have joined forces to offer a unique Euro- Asian curriculum at the master's level that addresses key issues in communication networks and services in both the European and the Asian contexts. After successful completion of studies in Asia and Europe,

students earn both a Master’s degree from AIT and an MSc degree from TSP.

PAGE: Dual Degree Master’s Program in Geotechnical and Earth Resources Engineering with Colorado State University (USA) – Asian Institute of Technology

URL: <https://ait.ac.th/program/dual-degree-masters-program-in-geotechnical-and-earth-resources-engineering-with-colorado-state-university/>

Dual Degree Master’s Program in Geotechnical and Earth Resources Engineering with Colorado State University (USA)

MEng/MSc in Geotechnical and Earth Resources Engineering from Asian Institute of Technology, Thailand and MS in Civil Engineering from Colorado State University, USA

About the Dual Degree

The dual degree program gives students the opportunity to obtain two Master’s degrees in two years. The aim of this dual degree program is to prepare students for careers in geotechnical and geoenvironmental engineering fields by providing strong theoretical academic knowledge and applied practice experience to the students.

Advantages

- Students are awarded two degrees in two years from prestigious and world-renowned universities. A degree of MEng/MSc in Geotechnical and Earth Resources Engineering from Asian Institute of Technology, Thailand, and an MS in Civil Engineering from Colorado State University, USA.
- Students have opportunities of networking with other students, researchers, and faculty from more than 50 countries during their studies at AIT and CSU.
- Students acquire knowledge and skills from unique curricula offered by the two institutes, including laboratory and field-scale experimentation, and mathematical modeling with high-speed computing facilities.
- Students have the opportunity to work jointly with AIT and CSU faculty members for their research study.

Target group

Highly motivated and ambitious candidates with a bachelor’s degree preferably in Civil, Geotechnical, Earth Resources, Geosystem Exploration & Petroleum Geoengineering, or related fields.

Minimum Admissions Requirements

- Hold a Bachelor’s degree in engineering or a closely related field (normally from a four-year program), or its equivalent;
- Have undergraduate grades significantly above average; the minimum GPA requirement for admission to the Master’s Program is 3.0 or equivalent at the Bachelor’s degree level;
- English Proficiency Requirement: IELTS 6.5 (writing 6 minimum) or TOEFL IBT: 80 (writing 21-23);
- Three letters of recommendation

Admission Process

Interested candidates apply for admission with AIT and CSU simultaneously. The application website

is <https://www.ait.ac.th/admissions/application-form/for> AIT and <https://gradadmissions.colostate.edu/apply/for> CSU. The application deadline is on 30 April. AIT will coordinate with CSU on admissions and short-listed candidates will be jointly interviewed for admissions and scholarships. Students will be admitted to both AIT and CSU.

Scholarships

AIT (First year): AIT will award AIT Scholarships based on the selected candidate's academic credentials.

CSU (Second year): CSU will award a graduate assistantship (GTA or GRA) which covers a monthly stipend of approximately US\$ 1,800 and tuition

Note: The cost does not include international and local travel expenses and students need to pay approximately US \$1,100 per semester in student fees at CSU.

PAGE: Dual Degree Master's Program in Water Engineering and Management with Colorado State University (USA) - Asian Institute of Technology

URL: <https://ait.ac.th/program/dual-degree-masters-program-in-water-engineering-and-management-with-colorado-state-university/>

Dual Degree Master's Program in Water Engineering and Management with Colorado State University (USA)

MEng/MSc in Water Engineering and Management from Asian Institute of Technology, Thailand and MS in Civil Engineering from Colorado State University, USA

About the Dual Degree

The aim of this dual degree program is to prepare students for careers in hydrology, hydraulics, water quality and water resources, and environmental management, by providing a strong theoretical and applied foundation, and a broad-based academic background necessary for innovation and career in engineering design, research, consulting and academia.

Advantages

- Students are awarded two degrees in two years from prestigious and world-renowned universities. A degree of MEng/MSc in Water Engineering and Management from Asian Institute of Technology, Thailand, and MS in Civil Engineering from Colorado State University, USA.
- Students have opportunities of networking with other students, researchers, and faculty from more than 50 countries during their studies at AIT and CSU.
- Students acquire knowledge and skills from unique curricula offered by the two institutes, including laboratory and field-scale experimentation, and mathematical modeling with high-speed computing facilities.
- Students have the opportunity to work jointly with AIT and CSU faculty members for their research study.

Target group

Highly motivated and ambitious candidates with a bachelor's degree preferably in Civil, Environmental or Water Resources Engineering or related fields.

Minimum Admissions Requirements

- Hold a Bachelor's degree in engineering or a closely related field (normally from a four-year program), or its equivalent;
- Have undergraduate grades significantly above average; the minimum GPA requirement for admission to the Master's Program is 3.0 or equivalent at the Bachelor's degree level;
- English Proficiency Requirement: IELTS 6.5 (writing 6 minimum) or TOEFL IBT: 80 (writing 21-23);
- Three letters of recommendation

Semester	Aug-Dec(Year 1)	Jan-May(Year 1)	May-July(Inter-sem)	Aug-Dec(Year 2)	Jan-May(Year 2)
Institute	AIT(Thailand)	AIT(Thailand)	AIT(Thailand)	CSU(USA)	CSU(USA)
Degree	MEng/MSc in Water Engineering and Management			MS in Civil Engineering	

Admission Process

Interested candidates apply for admission with AIT and CSU simultaneously. The application website is <https://www.ait.ac.th/admissions/application-form/for> AIT and <https://gradadmissions.colostate.edu/apply/for> CSU. The application deadline is on 1 February. AIT will coordinate with CSU on admissions and short-listed candidates will be jointly interviewed for admissions and scholarships. Students will be admitted to both AIT and CSU.

Scholarships

AIT (First year): AIT will award AIT Scholarships based on the selected candidate's academic credentials.

CSU (Second year): CSU will award a graduate assistantship (GTA or GRA) which covers a monthly stipend of approximately US\$ 1,800 and tuition

PAGE: Dual Degree Master's Program in Water Engineering and Management with the University of Iowa (USA) - Asian Institute of Technology

URL: <https://ait.ac.th/program/dual-degree-masters-program-in-water-engineering-and-management-with-the-university-of-iowa/>

Dual Degree Master's Program in Water Engineering and Management with the University of Iowa (USA)

MEng/MSc in Water Engineering and Management from the Asian Institute of Technology (AIT), Thailand, and MSc in Civil and Environmental Engineering from the University of Iowa (UI), USA

About the Program

This program will prepare students for careers in hydrology and hydraulics by providing them with a strong foundation that includes both the theoretical and applied study of fluids. Students will receive the broad-based academic background needed for a career in engineering design, research, consulting, or academia. The AIT brings 60 years of regional experience in water education and research, complemented by the University of Iowa's century of global leadership in fluids-related teaching and research, including experimentation (both laboratory and field-scale) and mathematical modeling.

Dual Degree Structure & Pathway

Admission Requirements

- Hold a bachelor's degree (normally from a four-year program), or its equivalent
- The minimum undergraduate GPA requirement for admission to the master's program is 3.0 or equivalent
- AIT: IELTS-Academic: 6 (writing 6) TOEFL Paper: 550 (writing 59-61) TOEFL CBT: 213 (writing 25-26) TOEFL IBT: 80 (writing 21-23)
- UI: TOEFL IBT: 81 IELTS: total score of 7.0 (no sub-score less than 6.0)
- Students satisfying the AIT requirement can be admitted to the program; however, to continue to Phase 2, students must achieve the UI scores for English proficiency while at AIT.
- Two letters of recommendation
- GRE: 301 (verbal + quantitative) Students without GRE can also be admitted to the program; however, to continue to Phase 2, they must achieve the required GRE score while at AIT.

Admission Process

Interested candidates should apply for admission at AIT, which can be done online on the website: www.ait.ac.th/admissions

The application deadline for AIT is 30 May for the following August.

Students need to submit their applications for admission to UI during their first year at AIT. Online application for the Civil & Environmental Engineering program at UI can be found on the website: <https://www.engineering.uiowa.edu/future-students/graduate-studies/line-application>

The application deadline for UI is 28 February.

Students need to submit their application for admission to UI by February 28 during their year of studies at AIT. The selected candidates will receive an admission letter from UI during their first year at AIT.

Course Expenses

AIT (first year)	UI (second year)
Tuition Fee: U.S. \$19,200	Tuition Fee: U.S. \$30,900
Registration Fee: U.S. \$1,333	Living Cost & Other: U.S. \$15,000
Living Costs & Other: U.S. \$5,000	

Note: Does not include international and local travel expenses.

Scholarships and Support

- Meritorious students may apply for scholarship support.
- AIT will provide support for admission to the University of Iowa.
- AIT will provide students with support in preparing for the GRE.

PAGE: Environmental Engineering and Management (EEM) – Asian Institute of Technology

URL: <https://ait.ac.th/program/environmental-engineering-and-management/>

Environmental Engineering and Management (EEM)

Introduction / Background

Environmental Engineering at AIT began in 1964 with the need for sanitary engineering to address the problems of providing adequate water supplies and sanitation facilities. This pioneering environmental engineering program has grown into a range of fields needed to tackle the emerging environmental issues facing Asia today.

By integrating multidisciplinary learning and research-driven approaches, the program contributes directly to advancing the global sustainability agenda, particularly in areas such as climate action, clean air, water and sanitation, sustainable urban development, and responsible resource management. Through active collaboration with public and private sectors, the program is designed to strengthen regional capacity, support evidence-based policymaking, and foster innovative solutions that respond to the evolving development needs of Asia and the wider global community.

Areas of Specialization

In response to these demands, the program offers two specialized areas of study:

- **Environmental Sustainability and Management** This field takes a systems-based perspective on tackling environmental challenges, integrating technical, social, and policy dimensions. It equips students to design strategies that balance development with ecological integrity by linking industry, government, and community roles. Emphasis is placed on sustainable planning, governance, and inclusive management of waste, water, sanitation, and air quality. Students gain skills in impact assessment, circular economy, and nature based solutions, preparing them to lead in sustainability policy, environmental planning, and corporate responsibility, and to guide transitions toward low carbon, resource-efficient economies.
- **Environmental Innovations and Engineering** This field emphasizes the technical and engineering aspects of environmental protection and infrastructure. It builds expertise in designing, operating, and optimizing systems such as water supply, wastewater treatment, waste management, and air pollution control. Priority is given to innovation, including energy and resource recovery, biotechnologies, and digital monitoring tools. Students are trained to apply scientific and engineering principles to practical solutions that improve efficiency, reduce emissions, and ensure sustainable resource use. Graduates are prepared to contribute to infrastructure projects, technological innovation, and industrial practices that support cleaner production and climate resilience.

Focus Areas

- PM2.5 and other air pollution problems
- Short-lived climate pollutants
- Greenhouse gas mitigation biotechnologies
- Solid (including plastic) and hazardous waste
- Inclusive Sanitation
- Life Cycle assessment
- Water treatment
- Waste water treatment
- Resource recovery, including microbial biotechnologies

Preferred Background

The Environmental Engineering and Management program is open to all science and engineering students and professionals. However, students or professionals with other backgrounds are also welcome and will be considered on a case-by-case basis. Compatible examples of students from science backgrounds (but not limited to): public health, environment, chemistry, biology, microbiology, and earth sciences. Compatible examples of Engineering background: chemical engineering, civil engineering, environmental engineering.

Course Structure

Master's Program

A master's program requires 48 credits with two options: Option 1: A minimum of 26 credits of coursework and 22 credits of thesis Option 2: A minimum of 36 credits of coursework and 12 credits of research study

Students can obtain a master's degree in environmental engineering and management by completing a 48 credits curriculum work while achieving a final cumulative grade point average of not less than 2.75.

Doctoral Program

The Doctoral program requires a minimum of 84 credits that comprise a minimum of 12 credits of coursework at AIT, which may include 3-credits of special study. This minimum credit requirement must be completed before the student is advanced to candidacy. The dissertation is worth 72 credits for the regular doctoral program.

PAGE: Food Engineering and Bioprocess Technology (FEBT) - Asian Institute of Technology

URL: <https://ait.ac.th/program/food-engineering-and-bioprocess-technology/>

Food Engineering and Bioprocess Technology (FEBT)

Area of Specialization under the Food Innovation, Bioprocessing, Nutrition and Health (FIBNH) program

Food Engineering and Bioprocess Technology (FEBT) at AIT is a unique program as it combines engineering concepts with bioprocess technology for real-world applications. The program focuses on two major areas of specialization: Food Process Engineering and Bioprocess Technology. Food Process Engineering focuses on the application of engineering principles to the design of postharvest and food processing equipment; changes that may occur within products during handling, processing, and storage; measuring and controlling the quality of raw food materials; food safety; the handling and utilization of wastes generated during on-farm processing. Bioprocess Technology is dedicated to the developments in biotechnology and its applications in agro/food, functional food, biopolymers, dairy and meat science, cosmetics and pharmaceuticals. Industrial bioprocess technology for the conversion of raw agricultural products to useful food products, biomaterials with specific growth-promoting properties are developed for application in organic farming. To strengthen the applicability of microorganisms for specific purposes, courses are given in the genetic engineering of microorganisms. DNA with interesting properties is transferred to produce strains for industrial applications. Students spend the first year with relevant courses as listed below and the final year with a thesis based on pure research according to their interests.

FOCUS AREAS

- Food Engineering
- Postharvest Technology
- Novel Food Processing Technologies
- Chemical Sensors, Biosensors and Sensing Technology for Food Safety Application
- Innovative and Sustainable Packaging Systems
- Biotransformation of Agro-industrial Waste and Value Additions
- Molecular Biotechnology and Food Safety
- Advance Bioprocessing and Tissue Culture
- Nanobiotechnology
- Microbial Physiology and Metabolic Engineering.

PREFERRED BACKGROUND

- Science in Microbiology
- Science in Animal Produce Food Safety
- Pharmacy
- Science in Agriculture
- Food Science and Technology
- Food Technology

- Science in Food Safety
- Biotechnology ,Food science ,Food management, Food and nutrition, Nutrition science

COURSE STRUCTURE

Course Code	Course	Number of Credits	Description/Course Objective	Semester
ED73.01	Food Process Engineering	3	To provide students with engineering principles in food processing operations and technologies to enhance the quality, safety and sustainable processing of foods.	Aug Sem
ED73.02	Postharvest Engineering	3	To impart knowledge on pre and postharvest engineering practices necessary to minimize the postharvest losses in cereals, horticultural crops and ensure the safety and quality of processed food.	Aug Sem
ED73.03	Bioprocess Technology	3	To provide the students with current concepts and the basic principles for the quantitative analysis of biotechnology and its applications in the food, feed, environmental and pharmaceutical industries.	Aug Sem
ED73.04	Bioreactor Design and Control	3	To impart knowledge on different configurations of bioreactors, optimization and fermentation process control, which are required for novel bioprocess applications such as in food, environment, pharmaceuticals and tissue culture systems.	Aug Sem
ED73.06	Food Engineering Operations	3	To equip students with the basic scientific knowledge of food manufacturing and its link with food engineering operations by emphasizing on the principles and design of the systems for food processing and preservation.	Jan Sem
ED73.08	Numerical Computations in Food Process Engineering	3	To introduce students important numerical methods which can be applied to solve a wide variety of problems in food process engineering.	Jan Sem
ED73.09	Engineering Properties of Food Materials	3	To provide knowledge on the principles involved in the measurement of physical characteristics, mechanical, thermal, electrical, and optical properties of food materials. Students also learn the analysis, interpretation and application of experimental data in relation to handling, processing, storage and quality evaluation of foods.	Jan Sem
ED73.10	Food Process Engineering Laboratory	3	To train students with the practical engineering aspects of the processes and equipments used for handling, processing, and distribution of food materials and products.	Aug Sem
ED73.11	Bioseparation Processes	3	To develop ability of students to analyze and design the separation and purification of bio-molecules.	Jan Sem
ED73.12	Advanced Bioprocess Technology Applications	3	To impart knowledge on new and efficient biotechnological methods for wide range of applications in food and agriculture, health care and environment management.	Jan Sem
ED73.13	Bioprocess Practica	3	To familiarize and provide practical experiences on microbiology, genetic engineering and biochemistry.	Jan Sem
ED73.15	Processing Effects on Functional Components of Foods	3	To provide knowledge on the molecular interactions of components and their effects on processing, nutritional attributes in complex food systems.	Aug Sem
ED73.16	Sustainable and Safer Food Processing	3	To impart knowledge on the modern concepts of sustainability and safety applied in food conversion. Understanding the entire product life cycle and its carbon footprint is a key to improve product quality and to enhance industrial production of food and biomaterials. This course provides the theoretical basis of sustainability and its application in various food processing operations.	Jan Sem
ED73.17	Industrial Microbiology	3	To develop the students' ability to apply the techniques used in the different phases of applied microbiology including principles and practices in the industrial production of foods, pure chemicals, proteins and other useful products.	Aug Sem
ED73.18	Enzyme and DNA Technology	3	To provide knowledge on the concepts and techniques of DNA technology in a rapidly developing field. As well as, this course deals with the enzymes that enable the cells to produce variety of compounds and the molecular properties of cellular genetic materials.	Aug Sem

Course Code	Course	Number of Credits	Description/Course Objective	Semester
ED73.9001	Selected Topic: Dairy and Meat Biotechnology	3	Overview and concern on food security and food production; Role of agricultural and animal biotechnology in food production; Advanced technology in farm animal production for enhanced productivity and in role of poverty alleviation; Chemistry and biochemistry of dairy and meat processing; dairy and meat technology; safety of dairy and meat products.	Jan Sem
ED73.9003	Selected Topic: Innovations in Safety and Quality in Food Production Systems	4	To provide the students with knowledge on the need for greater quality assurance, and standardization in the food production systems. The course emphasizes food quality control as the mechanism for the prevention of food-borne illness and food spoilage at the "farm-to-fork" level.	Aug Sem
ED73.9004	Selected Topic: Methods in Bioprocessing and Molecular Biology	2	To familiarize and provide practical experiences on microbiology, bioprocessing, genetic engineering and biochemistry.	Jan Sem
ED73.9005	Selected Topic: Molecular Nutrition, Food Toxicology and Health	3	To provide knowledge on the molecular interactions of components and their effects on processing, formation of toxic compounds and nutritional attributes in complex food systems and their effects on human health.	Jan Sem

Minor details: The offer of "Minor" in "Food Engineering and Bioprocess Technology", FAB Department will be in with the following courses

Course code	Course title	Credit	Semester
ED73.01	Food Process Engineering	3(3-0)	August
ED73.03	Bioprocess Technology	3(3-0)	August
ED73.10	Food Process Engineering Laboratory	3(1-6)	August
ED73.13	Bioprocess Practica	3(1-6)	January

PAGE: Industrial and Manufacturing Engineering (IME) – Asian Institute of Technology

URL: <https://ait.ac.th/program/industrial-and-manufacturing-engineering-ime/>

Industrial and Manufacturing Engineering (IME)

Area of Specializationunder theIndustrial Systems Engineering (ISE)program

Since its inception in the early 1970's, the Industrial and Manufacturing Engineering program at AIT has committed to preparing qualified engineers with high-tech knowledge for supporting sustainable industrial development of the region. Starting as Systems Engineering in the early days and becoming Industrial & Manufacturing Engineering today.

Research Focus Area

- Supply Chain and Logistic Management
- Supply Contracts
- Inventory Policy with Emergency Order
- Customer-Oriented FMEA
- Innovative Design for Customer Experience
- Design for Each of Use Program Brochure [Download](#)

Preferred Background

For Master Program

Strong quantitative background; undergraduate degree in mechanical, production, industrial, electrical, electronics, or chemical engineering; other engineering fields; other applied sciences.

For Doctoral Program

One should have a good master's degree in one of the above disciplines.

Highlight

Our focus has always been on responding to current needs and future trends for industry to be competitive, and we have achieved it through these following.

- A high-quality graduate education program;
- Teaching excellence through research activities;
- Strong relationship with private and public sectors,
- Partnership with various manufacturing and service industries.

Master's Program

Master's Program DescriptionDuring the first two semesters, master's students are expected to complete the coursework requirement. In summary, a master's student in Industrial and Manufacturing Engineering (IME) follows:Duration: 4 semesters and 1 Inter-Semester Period (22 months)Master's Program Duration Table

	Thesis Option	Research Option
Required Courses	9 credits	9 credits
Elective Courses	17 credits	27 credits
Option	22 credits	12 credits
Total	48 credits	48 credits

Doctoral Program

Doctoral students in Industrial and Manufacturing Engineering (IME) are required to take a minimum of 84 credits that comprise 12 credits of coursework (may including a maximum of 3 credits of special study) and 72 credits of dissertation. The composition of courses taken by a doctoral student requires the consent of his/her dissertation advisor.

In summary, a doctoral candidate in Industrial and Manufacturing Engineering (IME) follows:

- Duration: 7 semesters and 2 or 3 Inter-Semester Periods
- Total Credits Required: 84 credits = 12 coursework credits + 72 research credits

Course Structure

Course Code	Title	Semester	Course Credit	Type
AT72.01	Deterministic Optimization Models	August	3(45-0)	General

Industrial Systems Engineering (ISE)

Introduction / Background

The Industrial Systems Engineering (ISE) program addresses the systematic design, optimization, and operation of integrated engineering systems involving people, equipment, materials, data, and processes. It provides a rigorous engineering framework for improving productivity, reliability, quality, and sustainability across industrial and technological systems, in response to the increasing complexity and technological intensity of modern industries.

The ISE program brings together specialized tracks in Industrial and Manufacturing Engineering, Mechatronics and Machine Intelligence, Biomedical Engineering, Semiconductor Engineering, and Artificial Intelligence of Things and Signal Processing. This integrated structure enables students to develop strong engineering foundations while gaining exposure to advanced technologies that support smart manufacturing, intelligent systems, and high-value industrial applications.

Areas of Specialization

The Industrial Systems Engineering (ISE) program offers the following areas of specialization:

- Artificial Intelligence of Things and Signal Processing (AIoT)
- Industrial and Manufacturing Engineering (IME)
- Mechatronics and Machine Intelligence (MMI)
- Biomedical Engineering (BME)
- Semiconductor Engineering (SCE)

Focus Areas

The Industrial Systems Engineering (ISE) program focuses on applied research and advanced engineering development in the following areas:

Industrial Systems and Quality Engineering

- Industrial systems design and optimization
- Production and operations systems
- Quality management and continuous improvement
- Logistics and supply chain systems

Intelligent Systems, Robotics, and Automation

- Intelligent vehicles and autonomous systems
- Robot manipulators and cooperative robotics
- Automated Guided Vehicles (AGV) and Laser Guided Vehicles (LGV)
- Rehabilitation machines and assistive robotic systems
- Exoskeleton systems and human-machine interaction

Mechatronics and Embedded Engineering Systems

- Mechatronic system design and integration
- Embedded and real-time control systems
- Sensor-based systems and industrial instrumentation

Biomedical Engineering and Medical Technologies

- Biomaterials and biosensors
- Prosthetics and assistive devices
- Medical instrumentation and diagnostic systems
- Medical and rehabilitation robotics

Semiconductor and Electronic Engineering Systems

- Electronic and semiconductor-based systems
- Device integration for industrial and medical applications
- Electronics and communication hardware for engineering systems

AIoT and Smart Connected Engineering Systems

- Industrial IoT system design and implementation
- Sensing, monitoring, and control systems
- Wireless and mobile technologies for connected devices
- AI-enabled sensing and automation for engineering applications

Preferred Background

Master's Program

Applicants should hold an undergraduate degree in engineering or related applied science disciplines with a strong quantitative background, such as industrial, manufacturing, mechanical, electrical, electronics, mechatronics, computer, biomedical engineering, or other relevant fields.

Doctoral Program

Applicants should hold a relevant master's degree in engineering or applied sciences aligned with the focus areas of the Industrial Systems Engineering program.

PAGE: Professional Master in Data Science (PMDS) – Asian Institute of Technology

URL: <https://ait.ac.th/program/professional-masters-program-in-data-science-pmds/>

Professional Master in Data Science (PMDS)

The program is designed for working professionals with a background in ICT who would like to extend their skill set to encompass data science and become qualified experts in the principles and practices of data science.

Program Brochure [Download](#)

Background and Rationale

Data science is concerned with the extraction of useful knowledge from data sets. It is closely related to the fields of computer science, mathematics, and statistics. It is a relatively new term for a broad set of skills spanning the more established fields of machine learning, data mining, databases, and visualization, along with their applications in various fields. In 2012, Harvard Business Review called data science “The Sexiest Job of the 21st Century.”

Eligibility

The common core is designed so that any graduate of a 4-year Bachelor of Science or Bachelor of Engineering program can succeed in the program.

The mathematical background for the common core is undergraduate linear algebra and multivariate calculus (matrices, vectors, and partial derivatives) and basic probability theory (probability mass functions, probability density functions, sampling, and common distributions). The Mathematical Foundations of Data Science course provides a review of this background material and reinforcement of the particular mathematical techniques used in data science.

The assumed IT background is basic IT literacy and the ability to write basic programs in any high-level programming language. Applicants with no or very little programming experience should take an online course in Python programming, for example on Coursera, before beginning the PMDS.

Applicants with related work experience are preferable. In addition, applicants should be employed with a company or other organization that can utilize the skills obtained from the program. We expect students to apply the skills learned in PMDS to a problem faced by the company or organization in their industrial project.

Applicants should have a good command of English with an English proficiency score in the IELTS academic writing band of at least 5.0.

Semester	Period	Course
First semester	August-Mid December 2021	Core and elective courses
Second semester	January-Mid May 2022	Core and elective course
Third semester	June-July 2022	Individual project with industry

Course

1st Semester (August–November)	Computer Programming for Data Science	Required	3
1st Semester (August–November)	Data Modeling and Data Management	Required	3
1st Semester (August–November)	Fundamentals of Machine Learning	Required	3
1st Semester (August–November)	Mathematical for Data Science	Required	3
2nd Semester (January–Mid May)	Data Analytics for Business Intelligence	Required	3
2nd Semester (January–Mid May)	Data Driven Computer Vision	Required	3
2nd Semester (January–Mid May)	Deep Learning	Required	3

1st Semester (August–November)	Computer Programming for Data Science	Required	3
2nd Semester (January–Mid May)	Human-Computer Interaction	Required	3
3rd Semester (June–July)	Industrial Project	Required	6

PAGE: PM in ESG Management | AIT School of Management

URL: <https://som.ait.ac.th/pm-esg>

WHY PM-ESG Management?

- The business world faces a major transformation.

Consumers, employees, governments, and regulators all expect companies to show that they act ethically and respect people and the planet in their pursuit of profit. Business investments that prioritize social innovation, equity, and practical action have reached 700 billion US dollars, in 2021, in step with a surge in regulatory incentives. Environmental, social, and governance (ESG) standards are key differentiators.

- The search is on for ESG professionals with understanding and skills.

More and more ESG professionals are needed to steer corporate decision-making towards responsible profits. ESG management is emerging as a portfolio practical approach to Corporate Social Responsibility (CSR) values, and Sustainability principles, viewed from a Risk Management Perspective.

- More ESG professionals are needed than are available.

500,000 new ESG jobs are expected this decade. From entry-level data and compliance documentation to responding to process-level challenges confronting business growth for managing risk in the boardroom.

- PM-ESG prepares professionals for in-demand ESG roles.

ESG careers are opening in risk management, strategic planning, policy analysis, social impact, and business innovation. PM-ESG is offered by the AIT School of Management in collaboration with the Yunus Centre, AIT's ESG hub. Students earn a master's qualification without having to interrupt their careers. PM-ESG is attractive for employees because they can invest in building the ESG capacity of key management and staff, without having to displace employees

PROGRAM

PM-ESG Management is a 30-credit program that full-time students can complete in one academic year. To graduate, students complete eight 3-credit course modules and a 6-credit practicum and final project. Module topics are chosen for relevance to emerging ESG trends, strategic value for employers, and practical applicability to real-life challenges. Modules are available as in-house corporate workshops.

PM-ESG Management attracts working professionals from multinational retail, manufacturing, and extractive industries, international and national NGOs, the UN system, consulting firms, and grassroots development organizations.

PM-ESG Management flexible weekend format remains popular. PM-ESG capitalizes on AIT's hybrid multi-modal teaching model that combines online and in-class instruction with extensive practical exposure. With over 40 nationalities represented on campus, AIT offers an unmatched international learning environment.

PM-ESG Management is a transportable ESG qualification against which employers can standardize the recruitment of ESG professionals. An AIT degree is a recognized asset within the region and beyond. Compared to peer offerings, PM-ESG scores high for competitiveness, value-for-money, ease of access, and internationality.

CURRICULUM

PM-ESG Management curriculum is built on the foundations of risk management, organizational sustainability, innovation leadership, and social impact, augmented by direct practical exposure and case-based peer learning facilitated by experienced practitioners drawn from AIT alumni and the Yunus Academia Network worldwide.

PM-ESG Management is taught by teaching teams comprising academic faculty and industry executives. All 8-course modules are compulsory, carrying 30 hours of contact time, each. The 6-credit Practicum culminates in the Final Project, in which students design an implementable ESG solution for their company or institution.

ENTRY REQUIREMENTS

- Evidence of English language proficiency, which includes the AIT English Language Test (online) or IELTS at 6.0 or above. Further details of AITs language requirements can be found at: <https://www.ait.ac.th/admissions/eligibility/>
- Bachelor's degree with CGPA above 2.75, and a minimum of 3 years of appropriate work experience.
- Candidates without Bachelor's degree may be considered if they demonstrate 10+ years of work experience.

FEE & CHARGES

Tuition & Registration (inclusive)*

- Full PM-ESG as a regular program: USD 16,500, payable in 1, 3, or 5 installments
- Each module can be taken as a professional workshop: USD 1,800, payable upon registration
- Practicum-only option: USD 3,600, payable upon registration

*Payable in Thai Baht, exchange rates may vary

Competitive Tuition Scholarships for eligible applicants, organizational nominees, and groups.

PAGE: Public Policy Program – Asian Institute of Technology

URL: <https://ait.ac.th/program/public-policy-program/>

Public Policy Program

Introduction / Background

In a world shaped by geopolitical realignment, strategic competition, democratic pressures, technological disruption, climate risks, economic transformation, demographic change, and widening inequalities, governments and institutions must respond with agility, foresight, and responsibility. These conditions call for policy professionals who can navigate uncertainty while advancing inclusive and sustainable development.

Responding to these realities, the Public Policy academic Program prepares future policy leaders, analysts, and practitioners to address complex global challenges and development transitions. The program provides rigorous training in the foundations and practice of public policy design, negotiations, implementation and evaluation. Students build strong competencies in governance, political economy, law, and policy analysis while engaging with critical domains such as economic development, social policy, labour and employment systems, artificial intelligence and digital transformation, energy transition, and environmental sustainability. Ethics is an important dimension of public policy making. The students will also be trained on communicating policy analysis to decision makers and to the public.

The curriculum equips post graduate students to design and implement effective policies, apply evidence-based analytical tools, evaluate policy impacts, and manage competing priorities in complex environments. Emphasizing a systems perspective, the program prepares graduates to lead across sectors and governance levels, bridging policy, practice, and innovation. Graduates are positioned to assume influential roles across government, international organizations, development institutions, think tanks, and the private sector, shaping policies that advance equitable, resilient, and sustainable futures.

Areas of Specialization

- Digital Governance and AI policy
- Environmental and Climate Policy
- Urban and Infrastructure Policy
- Rural Governance and Development Policy
- Socio-economic Development Policy

Focus Areas

- Foundations of Policy Analysis
- Macro/Micro Economics for Public Policy
- Policy Design and Impact Evaluation
- Institutions and Governance
- Policy Implementation and Public Administration
- Policy Communication and Public Participation
- Ethics and Policy Advocacy
- Climate and Environmental Policy
- Rural Development and Innovation
- Social Policy and inclusive economic development
- Digital Governance and AI
- Urban and Infrastructure Policy
- Quantitative & Qualitative Policy Research Methods

Preferred Background

As an interdisciplinary academic program, it welcomes applicants from economics, environmental science, political science, social sciences, and related disciplines who demonstrate strong academic preparation and a clear commitment to public policy.

PAGE: Master's in Semiconductor Engineering in Asia | AIT Thailand

URL: <https://ait.ac.th/program/semiconductor-engineering-sce/>

Semiconductor Engineering (SCE)

Area of Specializationunder theIndustrial Systems Engineering (ISE)program

The region’s growing industrial sector and the increasing demand for high technologies have brought the need for expertise in Semiconductor to a critical level. The Master Program in Semiconductor, introduced in May 2000, responds to the needs of countries in Southeast Asia, many of which are in transition from labor-intensive to high-tech industries. The curriculum focuses on the design and IC packaging aspects for specific applications. Fabrication, including prototyping of chips, is included in the curriculum and is featured in partnership with Semiconductor industries and collaborating universities overseas. Currently, courses in Bio-Nano Materials Science and Engineering are being added to the offerings of the field.

Programs leading to the award of AIIT’s Doctor of Engineering, Doctor of Technical Science, Master of Engineering, Master of Science, diploma, and certificate are offered.

Programs leading to the award of AIIT’s Doctor of Engineering, Doctor of Technical Science, Master of Engineering, Master of Science, diploma, and certificate are offered.

Semiconductor provides new insights through an integrated consideration of mechanics, electronics, and information technology. The curriculum is designed to provide multidisciplinary knowledge and to develop the ability to design mechatronic systems. Programs leading to the award of AIIT’s Doctor of Engineering, Doctor of Technical Science, Master of Engineering, Master of Science, diploma, and certificate are offered.

Semiconductor provides new insights through an integrated consideration of mechanics, electronics, and information technology. The curriculum is designed to provide multidisciplinary knowledge and to develop the ability to design mechatronic systems. Programs leading to the award of AIIT’s Doctor of Engineering, Doctor of Technical Science, Master of Engineering, Master of Science, diploma, and certificate are offered. The school and department that offers this program

- School of Engineering and Technology
- Department of Industrial Systems Engineering

Preferred Background

Master Program

Undergraduate degree in Engineering, Electrical Engineering, Computer Engineering, Computer Science or a closely related field (normally from a four-year program), or other closely related engineering disciplines.

Doctoral Program

One should have a good master’s degree in one of the above disciplines.

PAGE: Structural Engineering (STE) - Asian Institute of Technology

URL: <https://ait.ac.th/program/structural-engineering-ste/>

Structural Engineering (STE)

Introduction

Structural engineering (STE) has always been seen as one of the few professions where one can combine real technical skills with artistic flair. Structural engineers are known to be people who enjoy innovation, opportunities, responsibility and excitement, whilst working within a creative profession. Structural engineers plan and design various structures such as buildings, bridges, dams, sport stadiums, towers, and underground structures. As they create the built environment, they have an enormous impact on our everyday lives. In order to design and construct safe and economic structures, they need to keep abreast with the latest methods of structural analysis, modeling concepts for computation, advanced design, material technology, and improved knowledge in structural loadings.

Focus Areas

- Structural Health Monitoring and Damage Identification
- Seismic Design and Seismic Retrofitting
- Wind Tunnel Model Tests of Tall Buildings and Structures
- Computational and Finite Element Modelling
- Sustainable Materials and Design
- Forensic Engineering and Damage Identification Techniques

Preferred Background

Master Program Undergraduate degrees in Civil Engineering, mechanical engineering, and architectural engineering will be considered on a case-by-case basis

Doctoral Program Master's degree in Structural Engineering

Course Structure

Master's Program

A master's program requires 48 credits with two options:

- Option 1: A minimum of 26 credits of coursework and 22 credits of thesis
- Option 2: A minimum of 36 credits of coursework and 12 credits of research study

Students can obtain a master's degree in structural engineering by completing a 48 credits curriculum work while achieving a final cumulative grade point average of not less than 2.75.

Doctoral Program

The Doctoral program requires a minimum of 84 credits that comprise a minimum of 12 credits of coursework at AIT, which may include 3-credits of special study. This minimum credit requirement must be completed before the student is advanced to candidacy. The dissertation is worth 72 credits for the regular doctoral program.

PAGE: Urban Innovation and Sustainability (UIS) – Asian Institute of Technology

URL: <https://ait.ac.th/program/urban-innovation-and-sustainability/>

Urban Innovation and Sustainability (UIS)

Area of Specialization under theClimate Change, Disaster and Urban Sustainability (CCDUS)Program

Urban Innovation and Sustainability (UIS) program aims to enhance the capacity of professionals in coping with growing and complex urban needs, challenges and opportunities. Innovation refers to the development of new technologies such that they denote physical objects (e.g. products, services) and knowledge systems (e.g. methods, systems), and sustainability transition aims to meet socio-ecological system needs in ways that promote healthy ecosystems, human well-being, and viable economies. The program covers systems approach of multi-scale and cross-sector, and multi-agent connectivity and decision making. It also applies different methods of enhancing capacity, for emerging themes, e.g., ageing society, circular economy, smart buildings, responsible tourism and consumption, healthy and inclusive cities, etc.

Focus Areas

- Innovation and Sustainability
- Urban Population and Health
- Sustainable Tourism
- Urban Landscape
- Digital Innovation for Build Environment
- Urban Economics and Finance
- Global Cities
- Urban Governance
- Urban Sustainability Design
- Eco-Innovation

Preferred Background

- Master and Doctoral Program
- Undergraduate degree in any field of study

PAGE: Flexible Master's Option – Asian Institute of Technology

URL: <https://ait.ac.th/study/flexible-masters-option/>

Flexible Master's Option

The "Flexible Master's Option" is a new alternative to our traditional "On-campus Master Option" to conduct Master studies at AIT. It is applicable to selected programs at all of our schools. Students will receive the same degree and the same academic requirements apply as the program offered in our regular "On-campus Option". Students can do almost all coursework online via AIT's Hybrid Mode of Instruction (certain programs may require a lab and research work on campus).

How it Works

Typically, the 1st year is online via AIT's Hybrid Instruction. Students may spread coursework over more than one year. Students take the same course offered to on-campus students via Hybrid Mode. All classes are recorded for later viewing.

After completion of the coursework, students can do their research or thesis in the AIT Campus at a flexible time. In coordination with the Program Chair, students may come to campus in short blocks or up to 11 months, typically for thesis research work.

This is not an online program; students still need to come to the AIT Campus for certain activities such as labs or research work and the graduation ceremony. However, we will allow high flexibility for such activities at our beautiful green AIT Campus in Thailand.

Total flexible time to complete the program is 2 years at full time and 4 years as part time.

Advantages

The Flexible Master's Option gives you the flexibility you need!

- Flexible Time Management, "study when you're free", take courses online from home.
- Flexible Payment management, "pay as you study", payment course-by-course.
- No need to come to the AIT Campus for most of your coursework.
- Work & Study at your own pace from any location.

Cost

The Flexible Master's Option has the same cost as our regular "On-Campus Option". However, all Schools provide AIT Scholarships for eligible candidates. To give you more flexibility, we allow you to pay course-by-course. You need to register for a minimum of 6 credits per semester (equivalent to 2 courses). You may take up to 15 credits per semester.

How to Apply

To apply, go to the AIT online application form by clicking [here](#) and choose "Flexible Master Degree" in the drop down menu of the selected program.

Deadline

The application is currently open.

Payment

First, you need to decide for how many courses you want to enrollee, the minimum enrollment is 6 credits which is equivalent to 2 courses. The Program Secretary can advise you on details. You need to pay the full fee for your courses before the start of the semester. All details to make payments are at this website, [Click here](#).

Contact & Support

For More Inquiry, please contact: admissions@ait.ac.th

FAQ

Is the degree I get through the Flexible Master's Option the same as the traditional full time on-campus master? Yes, it is the same degree and you will receive the same graduate diploma. Due to the current situation, AIT has decided to release this new option to better cater the needs of you. We hope that will facilitate your personal and professional development.

What are the requirements for the Flexible Master's Option? Is it the same as the traditional full time on-campus master? Yes, same entry and graduate requirements, because it's the same degree that you will get.

What is the English requirement for the Flexible Master's Option? It is the same as the traditional full-time on-campus master's.

Is the Flexible Master's Option an online degree? No it's not, you still need to come to the AIT campus for certain activities such as labs (only for certain programs) and research work.

Do I need to prove that I am working to join the Flexible Master's Option? No, you do not need to prove this. Actually, you can do the Flexible Master's Option full time and graduate in 2 years Or as a part-time student and graduate within 4 years. It is totally up to your personal choice.

How much does the Flexible Master's Option cost?

It cost the same as the traditional full-time master. However, we provide AIT Scholarships for qualifying applicants. Details are available from the Schools and the Program.

In addition to the registration fee and tuition fees, you need to pay the application fee (800 Bath) and the Language Center fee (2000 Bath) only once.

Can I get a scholarship for the Flexible Master's option? Yes, qualifying applicants will get the AIT Scholarship. Of course, if you can find an external scholarship to support yourself, you are more than welcome to take this opportunity during your learning at AIT.

When is the Flexible Master's Option offered? It is offered in the Spring Semester in January. You can apply any time and need to pay the full fee for your registered courses (min 2 courses) before 8 January.

How can I apply for the Flexible Master's Option?

How can I apply for the Flexible Master's Option?

The application is online at this link [Application Form](#). Choose "Flexible Master Degree" in the drop-down menu of the selected program.

How many courses I need to take minimum for every semester and how many courses maximum? You need to register for a minimum of 2 courses per semester (6 credits) and a maximum of 15 credits.

How fast can I complete my master degree choosing the Flexible Master's Option? The fastest completion time is similar to our full-time on-campus masters within a period of 2 academic years.

How long I am allowed to study to complete the Flexible Master's Option? The maximum study period is 4 academic years.

How can I pay? You can pay by money transfer; the details are at this webpage: [Payment Advice](#)

If I chose the Flexible Master's Option, am I allowed to attend classes on the AIT campus? Yes, you can attend the classes on campus as well. That's up to you if you follow classes online via our Hybrid Mode or come to the classroom on campus. However, AIT does not support visas for non-Thai students during coursework time.

Can I choose any program of AIT for the Flexible Master's Option? No, this option is only available for selected programs. The full list of Flexible Master's Option programs is mentioned above on this page.

How I can follow the lectures remotely? All lectures will be delivered online via AIT's Hybrid Mode of Instruction. You can attend the classes online in real-time. Currently, we are using ZOOM to connect to the class. The lecturer will be able to see you on ZOOM on a screen in the classroom. You will be able to interact with the lecturer and the students in class and online.

Do I need to have my own Zoom account to follow the classes online? No, you do not need to have a Zoom account. You will receive a ZOOM invitation to login into the registered classes. However, we require you to use your full name when you log in for the lecturer and the other students in class and online to see who you are.

Are online classes recorded for later viewing? Yes, all classes will be recorded. You can view them any time later.

What do I need to attend classes online? You need internet connection and a computer with camera and microphone. The other available option is to use a smartphone as well; however, we recommend you use a computer.

Will I have AIT student status? Yes, you will be a registered AIT student like every student on campus. However, we do not provide a student visa for the time you conduct the online coursework. We will help you to obtain a student visa for the Master Thesis if you write the thesis on AIT campus.

Will I have an AIT email? Yes, as an AIT student, you will have an AIT student email account during the study period.

Can I come to the AIT campus for my thesis? Yes, you can come to the campus and stay on campus at our student residences. If you may prefer, you can stay for 2 semesters to complete your thesis on a full-time basis. Alternatively, you can make other arrangements with your supervisor, e.g. stay on campus in blocks and return home or leave for data collection. This is up to your supervisor and you to arrange.

Can I come to AIT for my graduation? Yes, sure you can attend the AIT graduation ceremony.

How much is the registration fee? The registration fee is calculated per credit of your registered courses per semester. The registration fee per credit is 1,667 Thai Baht. For a typical course of 3 credits, the fee is 5000 Thai Baht. You need to register for a minimum of 6 credits (typically 2 courses); then your total registration fee will be 10,000 Thai Baht per semester.

Will AIT help me to get a study visa and come to Campus? Yes, if you come to campus after the completion of your coursework to conduct your thesis research (24 credits) or research study (12 credits) AIT will help you to get a student visa to come to campus. You will not get a student visa for the time you spend on coursework from your home country. Some programs may have a lab for which you need to come to campus. In those cases, AIT will also support your visa.

PAGE: Student Internships – Asian Institute of Technology

URL: <https://ait.ac.th/student/student-internships/>

Student Internships

The objective of the internship program is to provide opportunities to the students to reflect upon, analyze, contextualize the classroom knowledge and expand student's experiences based on lectures or courses undertaken at AIT. Through the internship students can gain valuable practical experience and contextualize the class room learning; Furthermore, learning it also provides opportunities for enterprises and AIT to further develop programs, courses, lectures that increases the graduate's ability to apply classroom learnings of their specific field of study at related job or career. Internship program is an opportunity for our students to work closely with Enterprises to guide and motivate students to learn and gain necessary skills for career placement once they are graduated.

List of Host Organizations

Organizations providing internship opportunities are regularly updated and shared with you. The organizations at the link below are available for your internship opportunities.[View Internship Partner Companies](#)

When to Apply

Upon completion of the required courses and achieving required credits, students can apply for internship at theSIS Portal for (SET & SERD)andSIS Portal for (SOM).

Semester	Internship Duration	Application Period
Spring	January to April	1-15 September
Fall	August to November	1-15 March

Eligibility

To be considered eligible for Internship, you have to meet the following requirements:

- Must be a student enrolled in courses at AIT;
- CGPA no less than 3.00;Students upon completing two semesters / four terms (for SOM) of coursework with minimum CGPA of 3.0 and English level of at least 6.0 on AIT Standard are eligible for Internship;
- Approval, in principle, from academic advisor.

Duration of internship

The period of internship should be at least 480 hours over a minimum period of 3 months. The host organization and AIT Faculty Advisor, who will co-supervise the internship, must agree upon the internship assignment.

Internship Reports

The students are required to submit a report and make a presentation three times: proposal submission and presentation for assignment approval within the first month of joining internship, progress report and presentation for midway evaluation and feedback, and final report and presentation for grading to the evaluation committee. The final report contains introduction, statement of the problem, objective, methodology, results and discussion, conclusion and future recommendation and internship timesheet.

Please download the Internship Evaluation Form [here](#).

Practical Information

Academic Advisor

Before applying for internship at the host enterprise, you are advised to seek your Academic Advisor's feedback to ensure credit transfer.

Admissions

AIT welcomes talented, high-achieving students who contribute a wide diversity of views, experiences and perspectives. In this section [Admissions](#) [Eligibility](#) [Financial aid](#) [Tuition and fees](#) [Student housing](#) [Apply online](#) [Frequently Asked Questions](#)

Join us at AIT

We want to get to know you through your application, to hear your voice and explore your potential. We hope you get to know yourself better through the application process, too.

Across each and every program, we actively seek students from a wide variety of backgrounds. We value the exceptional academic talent, intellectual curiosity, individual perspectives, creativity, and other defining attributes that each student uniquely contributes to our community.

Programs

AIT provides students with distinctive opportunities to undertake their studies in rigorous and challenging ways. Each programs requires its own application for participation.

Deadlines and notifications

The AIT academic year consists of two semesters: January and August. The deadlines of applications for admissions and financial aid (Scholarships) are as follows:

January Semester/Term Intake:

- 20 December is the deadline for overseas applicants, requiring an educational visa

March Term Intake (only for the School of Management)

- 15 February is the deadline for overseas applicants, requiring an educational visa• 25 February is for other applicants

PAGE: Asian Development Bank–Japan Scholarship Program (ADB–JSP) – Asian Institute of Technology

URL: <https://ait.ac.th/financial/asian-development-bank-japan-scholarship-program-adb-jsp/>

Asian Development Bank–Japan Scholarship Program (ADB–JSP)

ADB–JSP scholarships are awarded at designated institutions (DIs) in the Asia and Pacific region for studies in economics, business and management, science and technology and other development-related fields.

A. Eligibility

- A national of an ADB borrowing member country (applicants from countries that are no longer borrowing from ADB are not eligible for the ADB–JSP Scholarship)
- A Bachelor's degree or its equivalent with a superior academic record.
- At least two (2) years of full-time professional working experience (acquired after a university degree) at the time of application.
- Proficiency in oral and written English communication skills to be able to pursue studies.
- Not more than 35 years old at the time of application. In exceptional cases, for programs which are appropriate for senior officials and managers, the age limit is 45 years old.
- In good health.
- Should agree to return to his/her home country after completion of studies under the Program.
- Executive Directors, Alternate Directors, management and staff of ADB, consultants, and relatives of the aforementioned are not eligible for the Scholarship.
- Staff of AIT are not eligible for the Scholarship.
- Applicants living or working in a country other than his/her home country are not eligible for the scholarships.
- ADB–JSP does not support applicants who are already enrolled in graduate degree programs.
- ADB–JSP does not sponsor undergraduate studies, distance learning programs, short-term training, conferences, seminars, thesis writing, and research projects.

B. Selection Criteria

- Priority to the ranking, or order of merit, proposed by AIT.
- Applicants with less than two years of work experience will not be selected.
- Preference to women candidates.
- Preference to applicants with lesser financial capacity. Family income should be not more than USD 50,000 per year and individual income should not be more than USD 25,000 per year.
- The Program will, in principle, not support applicants who have previously studied abroad.
- The Program will, in principle, not support applicants who are pursuing a second MA.
- Candidates who are applying at Designated Institute (DI–AIT) in their own country may not be selected.
- Diversification of nationality in the overall Program as well as at each DI level will be considered.
- The Program encourages studies in line with core areas of ADB's Strategy 2030, which address poverty reduction through infrastructure, environment, regional cooperation and integration, finance sector development, and education. Strategy 2030, ADB's strategy, sets ADB's strategic course for its operations to the year 2030.

For more details, please refer to this [LINK](#)

The following documents are required

- Copy of Degree Certificate and Transcript of 4 years of undergraduate degree program
- Have English proficiency score as required by AIT Language Center (IELTS–Academic: 6 (writing and overall) or AIT EET ≥ 6.0, TOEFL ≥ 550).
- Work certificate provided by the employer.

- Income statement. If married, please submit the spouse's income statement; otherwise, the parent's income statement. This document should be certified by the local Municipality.
- ADB-JSP Information Sheet.

C. Procedures for Applying:

- Applicants should request information and application forms from the chosen DI (e.g. AIT). Applicants are encouraged to access various resources, including the DI's website & handbooks, and DI information sessions held in-country, to assist them in making an informed decision on the DI and course they wish to undertake.
- Applicants should indicate to AIT that they are applying for admission and that they would like to be considered for the ADB-JSP Scholarship. The completed DI application form and required documentation, including the ADB-JSP Information Sheet form, should be submitted to AIT. Applicants must ensure that they submit accurate and complete documentation. Failure to do so may result in an application not being processed or an award being terminated if documentation or information provided is later determined to be false. Applicants are required to submit their latest Income Tax Return or a Certification of their Annual or Monthly Salary, whichever is available. They should also submit a Certification of Family Income (Parent's Income/Spouse if married).
- AIT will screen and rank the applicants based on its own selection criteria, keeping in mind the ADB's eligibility and selection criteria. In the evaluation process, AIT may contact the candidates for further information. AIT will then submit its ranked list of applicants to ADB, including a description of the scoring/grading system that forms the basis for the ranking.
- ADB will review the AIT submission and, based on ADB's selection criteria, recommend awardees to the Executive Director of Japan for formal approval.
- Upon the Executive Director of Japan's approval, ADB will advise AIT of the successful candidates.
- AIT will inform all applicants of the outcome of the selection process and begin to make arrangements for the awardees to take up their scholarships.
- AIT will arrange for the awardee to sign the Acceptance of Scholarship Award, in which the scholar agrees to return to their home country upon completion of their studies.
- ADB will send an appropriate congratulatory letter to each scholar.
- Interested applicants can apply through the AITonline admissionportal. No separate application to fill out. Applicants may describe in their statement of purpose seeking this scholarship. This can be in a separate file and uploaded to the application portal.

D. Coverage

- Tuition fees (actual costs)
- Housing (based on actual cost of dormitory housing or a reasonable allowance for appropriate off campus housing—to be agreed upon between each DI and ADB).
- Subsistence Allowance including housing allowance (a flat allowance to be agreed upon between each DI and ADB).
- Student Medical and accident insurance (flat allowance).
- Books (a flat allowance to be agreed upon between each DI and ADB).
- Economy class air travel at most direct route to and from the DI and the awardee's home country (actual costs).
- Miscellaneous expenses related to travel such as visa fees, airport taxes, luggage allowance, etc. (a flat allowance).
- Excess luggage up to 20 kgs may be financed during return travel to the home country (actual costs).
- Thesis/Research Allowance is intended to cover the scholar's research expenditures and can be used for such expenditure items as photocopying, school supplies, typing and computer charges, postage, communications, binding charges, local travel costs and accommodation for out-of-town trips. (a flat allowance)
- Scholars are expected to have sufficient skills in language and computer to undertake their study program. However, in special cases where additional training is deemed necessary, expenditures incurred to improve language proficiency and computer literacy may be covered under the scholarship (actual costs).
- The ADB-JSP does not cover: expenses for the scholar family; extra-curricular courses or training; additional travel during the course of study program; additional expenses related to supplementary educational materials, field trips, or participation in workshops, seminars, or internships while at the DI or purchase of educational equipment such as computers.

E. Policies and Procedures

- The ADB-JSP Scholarship is for the scholar only and does not cover the scholar's dependents' expenses.
- DIs are encouraged to provide tuition fee discounts to outstanding scholars, as agreed with ADB.
- Preparatory/bridging courses, such as English proficiency or computer literacy courses, can be funded by ADB-JSP. These courses should be undertaken within AIT.
- Expenses for activities not directly related to the pursuit of the degree, such as attendance at a conference and similar activities, are not financed under the ADB-JSP.

- Subsistence allowances are normally given to the scholars at the beginning of each month. However, AIT may disburse allowances according to its practice.
- For expenses related to air travel, AIT should provide ADB with a copy of the scholars' air tickets from their home countries to AIT. Return travel is paid upon successful completion of studies.
- An establishment allowance may be provided to new scholars to help with the initial costs of setting up their temporary home at AIT. This is paid only once at the start of the scholarship (a flat allowance).
- The ADB-JSP scholarship only supplements, and does not duplicate, any other source of financial support/fellowship the scholar might have. Scholars must inform the ADB-JSP if they have other sources of scholarship funds. The ADB-JSP stipend may be withdrawn completely or partially if, during the scholarship period, the program has evidence of additional sources of support.

For more details on ADB-JSP please visit this [LINK](#)

Guidelines

Terms of Awards

Scholarships are for a period of one to two years and are awarded at designated institutions (DIs) in the Asia and Pacific region. Studies in economics, business and management, science and technology, and other development-related fields are eligible. The maximum duration of the scholarship award is two years for the MA, MS, & MBA programs.

Remarks: The Government of Japan has made clear that it would support only up to 2 years, consistent with similar assistance that it is providing through other international development institutions.

A. Renewal of Scholarships

- The initial scholarship period is one year. An appropriate extension for the second year of study shall be conditional on the scholar's maintaining a satisfactory level of performance as determined by AIT.
- Extension of scholarships will not be allowed, in principle, beyond the two-year period.
- Scholarships may be suspended for a maximum of twelve months or two semesters, if deemed necessary for valid reasons such as health or family reasons.
- The total number of scholarship awards is reviewed and set yearly by ADB. Within the total number of scholars, ADB will approve new scholars based upon the recommendation of AIT when incumbent scholars complete studies or withdraw their scholarships.

B. Deferment of Awards

- Deferment of awards may be granted for up to a maximum of six months or one semester, at the discretion of AIT. AIT should submit the request for deferral to the ADB. Deferrals may be approved for valid reasons, including pregnancy, unresolved family issues, or failure to obtain a visa. If a student cannot take up the offer within one year after the year for which it is awarded, he/she has to reapply for the scholarship.

C. Replacement of Dropouts

- Replacement of scholars who have dropped from the Program is not allowed during the academic year.

D. Transfer of Scholarships

- A transfer from one course of study to another, or to another institution, is not allowed.

E. Special Conditions

- In accepting the ADB-JSP scholarship, scholars should commit themselves to return to, and work in their home countries for a period of at least 2 years after completion of their studies.
- In accepting the ADB-JSP scholarship, scholars consent to the employment restriction policy of the ADB-JSP and acknowledge that they will not be able to work at ADB for two years after completion of their academic programs.

F. Termination of Scholarships

- Scholarships maybe terminated upon the recommendation of AIT, at any time, for failure to make satisfactory academic progress, failure to comply with the laws of the host country, Thailand, misconduct, or breaches of the conditions of the ADB-JSP or the student visa.

Deadline for August 2026 intake: 31 March 2026

PAGE: DAAD Scholarship – Asian Institute of Technology

URL: <https://ait.ac.th/financial/daad-scholarship/>

DAAD Scholarship

DAAD Scholarship at AIT is Funded by the German Federal Ministry for Economic Cooperation and Development (BMZ).

Application Deadline for August 2026 Intake: February 16, 2026, to AIT and to the DAAD portal

For this scholarship, applicants need to apply for one of the following programs to be eligible for this scholarship. Please select your academic program carefully when applying for admission AIT system.

- Gender and Development Studies(GDS)/Click here for program schedule for 2025
- Natural Resources Management(NRM)/Click here for program schedule for 2025

Eligible Countries

Cambodia, Indonesia, Lao, Myanmar, Malaysia, the Philippines, East Timor, Thailand, and Vietnam

Application Requirements

- Must be nationals of one of the following countries: Cambodia, Indonesia, Lao PDR, Myanmar, Malaysia, the Philippines, East Timor, Thailand, and Vietnam
- have successfully completed a three or four-year bachelor's degree with above-average academic performance (upper third of class) not more than 6 years ago at the time of application.
- clearly show motivation and strong commitment.
- have a thorough command of written English (IELTS or AIT-EET 6.0 or above). See<http://bit.ly/ait-eng-req>
- must fulfill AIT online admission requirements. Applicants must apply to<http://bit.ly/ait-admissionand> pay the processing fee

Female applicants and candidates from less privileged regions or groups are especially encouraged to apply.

Duration and Commencement

Scholarships are awarded for the duration of the standard period of study for the chosen programme (up to a maximum of 22 months). Please state the entire period for which you wish to apply for a scholarship in your application. For example, if you are planning a 2-year degree programme, you must directly communicate two years as the desired scholarship duration in your application. After the first year of study, your academic achievements will be assessed in a further funding procedure. If this assessment shows that you will successfully complete your programme within a reasonable period of time, the scholarship will continue as planned.

The scholarship usually begins in August of the following year

Selection Procedure

After the deadline of 16 February 2026, AIT will screen, pre-select (according to DAAD selection criteria) and short-list the applicants. Short-listed applicants will be contacted for the following additional documents:

- DAAD application form duly filled in (to be provided to short-listed applicants)
- Hand-signed curriculum vitae (please use the European specimen form at <http://europass.cedefop.europa.eu>), including a list of publications (if applicable).
- One recommendation letter by a university teacher
- Letter of admission from AIT
- Certified copies of university degree certificates, including transcripts
- Letter of motivation (if applicable: mentioning the planned research stay in Germany; see "Additional benefits")
- Copy of the passport

*Note: Only short-listed applicants will be contacted by AIT

Please note that all these documents need to be prepared by AIT and submitted by 27 February 2026 to DAAD.

Scholarship Objectives

The DAAD Scholarship aims at fostering strong, internationally oriented higher education systems in Southeast Asia with the capacity to contribute to sustainable development. To this end, scholarships are granted for development-related Master studies for individuals who plan to pursue a career in teaching and/or research at a higher education institution in Southeast Asia.

By training future academic and professional leaders, the scholarship program will have the following long-term impacts:

- Qualified professionals' involvement in the solution of development-related problems in Southeast Asia
- Graduates strengthening education and research in Southeast Asia
- Structural strengthening and regional networking of partner institutions and partner universities

To achieve these long-term impacts, the following outcomes have been formulated as programme objectives:

- Scholarship Objective 1: Graduates are qualified to take leadership in development and sustainability in their region of origin and beyond
- Scholarship Objective 2: The participation of women and underprivileged groups is reinforced
- Scholarship Objective 3: Organizational, financial, and personal capacities of partner institutions are strengthened

Please be aware of the DAAD's application deadline (16 February 2026) and the AIT deadline (16 February 2026).

The application process for DAAD scholarships contains the following steps:

- Register on the portal: <https://www.meindaad.de/en/help/how-do-register-for-an-application/>
- Log in to the portal
- Carefully read the instructions on how to apply in the portal: <https://www.meindaad.de/en/help/how-can-i-submit-my-application/>
- Submit your application via the portal by the deadline indicated on the cover page of this document (16.02.2026). Use the following link to access the funding programme via the portal directly: <https://portal.meindaad.de/sites/personalfunding/#PBFApplication> Start? fundingProgramInstance=57859089 Applications are only accepted during the application period from 01.12.2025 to 16.02.2026.

Further Inquiries

For further inquiries on AIT Admissions Requirements and Procedures, applicants can visit the AIT Admissions website. You may also contact the following address:

Admissions and Scholarships Unit Asian Institute of Technology P.O. Box 4, Klong Luang Pathumthani 12120 THAILAND (662) 524 5024, 31-33

admissions@ait.ac.th

Scholarship Funding: The scholarship covers the following items:

Item	Payment Frequency	Amount
Tuition fees	Twice a year	The regularly charged amount
Study and research allowance	Annually	460 EUR
Printing allowance	Once (at the end)	400 EUR
Bursary (Accommodation, Food etc.)	Monthly	500 EUR
Travel allowance (Non-Thai)	Twice (beginning/end of scholarship)	The flat rate travel allowance will be specified in the letter of award
Insurance	–	The tuition fees include health insurance

The scholarship will either be disbursed by the host institution, the German Embassy or will be paid directly to the scholarship holder's banking account. Further details will be announced after admission to the scholarship programme.

Additional Benefits

DAAD scholarship holders are also encouraged to apply for a research stay in Germany for 2 up to 6 months. Please note: The short-term research stay in Germany should preferably be announced in the application for the regular scholarship and can only be awarded if the necessary financial means are available. The short-term research scholarship includes:

- a monthly scholarship payment for living costs
- health/accident/personal liability insurance
- a flat-rate travel allowance

All further details regarding additional benefits and the additional application processes will be provided after being awarded the scholarship. For more information about this scholarship, please see a file below;

PAGE: GWSC Scholarships to study Master's degree in Asian Institute of Technology – Asian Institute of Technology

URL: <https://ait.ac.th/financial/gwsc-scholarships-to-study-masters-degree-in-asian-institute-of-technology/>

GWSC Scholarships to study Master's degree in Asian Institute of Technology

The Global Water & Sanitation Center (GWSC) is pleased to announce the establishment of 'GWSC Scholarships' for those students who want to study a Master's degree at the Asian Institute of Technology (AIT). The main objective of this scholarship is to support outstanding students & young professionals from developing countries to study engineering, environment, and management studies and contribute to their nation's development.

Global Water and Sanitation Center (GWSC) at AIT aims to expedite and support WASH (Water, Sanitation, and Hygiene) strategies in Asia and beyond by leveraging funding from governments, international financing institutions & other development partners. Currently, the center is hosting global water and sanitation initiatives, supported by the Bill & Melinda Gates Foundation, such as the Technical Assistance Hub (TA Hub), the development and scaling up of the Integrated Municipal Information System (IMIS), the improvement of the National Sanitation Dashboard (NSD) & Women in Sanitation Enterprises Project (WISE).

Eligible Countries:

South and Southeast Asia (Bangladesh, India, Indonesia, Nepal as a priority)

Application Requirements:

- The candidate should have a cumulative GPA of ≥ 3.5 in a bachelor's degree.
- Candidate should have IELTS-Academic with a score of 6.0 or AIT EET Score of 6.0.
- Brief research proposal on improving water supply, sanitation, and hygiene, including integration of data, gender, and climate change.
- Candidates working in the public sector will have an advantage.

Scholarships Benefits:

- Scholarships equivalent to 12 credits of tuition fee and 2 semester registration fees.
- Opportunity for internships in GWSC or GWSC partner institutes. GWSC has partnerships with more than 40 institutions.
- Office and facilities to conduct research in GWSC.
- Financial support to conduct research.

Contact: Prof. Sangam Shrestha & Prof. Thammarat Koottatep (Co-Directors) Email: gwsc@ait.asia

Interested applicants can apply through the AIT online admission portal. No separate application to fill out. Applicants may describe in their statement of purpose seeking this scholarship. This can be in a separate file and uploaded to the application portal.

Deadline for August Intake: 30 April

Further Inquiries

For further inquiries on AIT Admissions Requirements and Procedures, applicants can visit the AIT Admissions website. You may also contact the following address:

URL: <https://ait.ac.th/financial/lpdp-scholarships-indonesia-government-scholarships-for-indonesian/>

LPDP Scholarships, Indonesia Government Scholarships for Indonesian (2026)

Following representations to representatives of the Indonesian government, AIT received notification from the Indonesian government that it is listed under the “Beasiswa PNS, TNI, POLRI” type scholarship for Batch 2.

AIT (419) https://lpdp.kemenkeu.go.id/storage/beasiswa/kebijakan-umum/file/public_policy_file_1718877191.pdf

What this means is that the award goes to all public universities’ staff and government officials (including Police and Army personnel) to apply to study Master and PhD program at School of Management (SOM), School of Engineering and Technology (SET), and School of Environment, Resources and Development (SERD), at the Asian Institute of Technology (AIT), Thailand. Once they receive the official offer of admission (this covers all financial details of the cost of the program), they can submit these documents to LPDP to secure the full scholarship to AIT if they meet the LPDP criteria.

Those interested in applying for the programs below for January or August 2026 admission (this also includes March and June 2026 for further MBA admission enrolments) have until 18 July 2026 to complete the full application, receive an offer letter, and complete the other steps outlined below.

The detailed information on the application process:

2026 Scholarship Application

- Register online on the LPDP Scholarship Registration website: <https://beasiswalpdp.kemenkeu.go.id>
- Complete the AIT application process and receive an AIT offer letter.
- Complete and upload all required documents on the registration application to the address in #1. This includes Recommendation Letters, Certificates, or similar documents are issued in accordance with LPDP regulations. (Detailed information regarding the documents can be found in the booklet or guidebook for each program on the official LPDP website.)
- Ensure to submit the registration application to obtain the registration code.

2026 Registration and Selection Schedule

The selection process can be conducted online, offline, or a combination of both (hybrid), in accordance with LPDP policies, and will be communicated later.

Therefore, in the registration application, applicants must choose the city/location for the Selection as provided by LPDP. This is done as a precautionary measure in case the Selection process will be conducted offline or in a hybrid manner in the future.

If you need any assistance, please write to us at this email: oia@ait.asia, admissions@ait.asia

URL: <https://ait.ac.th/financial/research-fellow-program-for-public-policy-and-asian-study/>

Research Fellow Program for Public Policy and Asian Study

Public Policy Program (PPP) – Asian Institute of Technology (AIT)

The Asian Institute of Technology (AIT) is pleased to announce the Research Fellow for Public Policy and Asian Studies from the August 2026 Intake onward, with support from the Royal Thai Government.

This Research Fellow (Scholarship) is to support outstanding scholars/students pursuing Master's or Doctoral degrees in the Public Policy Program (PPP) under the Faculty of Public Policy and Sustainable Development (FPSD), AIT.

The Research Fellow Program aims to attract talented individuals interested in conducting research on key public policy areas relevant to sustainable development in Asia.

Areas of Specialization

Applicants to the Public Policy Program may pursue research in the following specialization areas:

- Digital Governance and AI Policy
- Environmental and Climate Policy
- Urban and Infrastructure Development Policy
- Rural Governance and Development Policy
- Socio-economic Development Policy

Research Themes

Research Fellows are expected to conduct research in public policy related to one of the following themes:

- Climate Change
- Natural Resources
- Technology
- Infrastructure
- Business Management

Applicants should clearly indicate in their application (statement) the policy theme and research area they intend to pursue for their thesis or research work.

Eligibility

Applicants must meet the following requirements:

- Nationality: Open to applicants of any nationality from Asia
- Degree Level: Master's or Doctoral programs
- Academic Background: Applicants from any relevant academic field are welcome to apply
- Academic Requirements: Applicants must meet AIT's standard admission requirements, including GPA and English proficiency criteria: Have an outstanding education record in a 4-year Undergraduate Program (applying for Master's Program) and 2-year Master's Program (applying for Doctoral Program) from an accredited institution in related fields; GPA of Bachelor's and Master's degree ≥ 3.5 or equivalent Two recommendation letters – applicant applying for a doctoral program. Research proposal – applicant applying for a doctoral applicant. Have an English proficiency score as required by AIT Language Center (IELTS 6.0 (Overall and Writing bands) or AIT EET ≥ 6.0).

Coverage

Each scholarship award covers tuition, registration fees, accommodation, and a bursary for living expenses at AIT's residential campus for the full 22-month duration of the Master's Program and 41-month (7-semester) duration of the Ph.D. programs. The value of the non-binding Scholarship per student is approximately 1-1.96 million Thai Baht.

Application Procedure

Interested applicants should apply through the AIT online admission portal and select the Public Policy Program (PPP). No separate application to fill out.

Applicants should clearly describe in their statement of purpose the public policy theme and research area they wish to pursue. This can be in a separate file and uploaded to the application portal.

About the Public Policy Program

The Public Policy Program (PPP) at AIT prepares future policy leaders, researchers, and practitioners to address complex governance and development challenges through interdisciplinary research and policy innovation.

Application Deadline: 10 May 2026.

PAGE: Royal Thai Government Scholarships – Asian Institute of Technology

URL: <https://ait.ac.th/financial/royal-thai-government-scholarships/>

Royal Thai Government Scholarships

The Asian Institute of Technology (AIT) administers a number of Doctoral and master's level non-binding scholarships, provided by the Royal Thai Government (RTG), to qualified candidates with excellent academic qualifications from Thailand and other Asian countries. The scholarships provide an opportunity for students from diverse backgrounds across Asia to study and conduct research together in a truly international environment at AIT, building a solid foundation for International understanding among the people of Asia.

His Majesty the King's Scholarships for Doctoral Programs

This scholarship is granted to qualified candidates with excellent undergraduate (Bachelor's degree) and graduate (Master's degree) achievements to pursue their Doctoral programs in any Academic Program offered at the Faculty of Civil and Environmental Engineering (FCEE), Faculty of Advanced Science and Technology (FAST), Faculty of Food, Agriculture and Natural Resources (FFARN), Faculty of Climate Change and Sustainability (FCCS), and Faculty of Public Policy and Sustainable Development (FPSD)

1. Bhutan, Laos PDR, Timor-Leste, and Thailand2) ASEAN countries3) BIMSTEC Countries4) Other Asian countries

Eligibility and required documents

- Have an outstanding education record in a 4-year Undergraduate Program and 2-year Master's Program from an accredited institution in related fields; GPA of Bachelor's and Master's degree ≥ 3.5 or equivalent
- Two recommendation letters;
- Research proposal;
- Have an English proficiency score as required by AIT Language Center (IELTS 6.0 (Overall and Writing bands) or AIT EET ≥ 6.0).

Coverage

Each scholarship award covers tuition, registration fees, accommodation, and a bursary for living expenses at AIT's residential campus for the full 41-month (7-semester) duration of Ph.D. programs. The value of the non-binding Scholarship per student is approximately 1.96 MB.

His Majesty the King's Scholarships for Master's Programs

This scholarship is awarded to qualified candidates from Asian countries who have demonstrated excellent undergraduate academic achievement and wish to pursue their first master's degree in any academic program offered at the Faculty of Civil and Environmental Engineering (FCEE), Faculty of Advanced Science and Technology (FAST), and the School of Management (SOM).

Her Majesty the Queen's Scholarships for Master's Programs

This scholarship is awarded to qualified candidates from Asian countries who have demonstrated excellent undergraduate academic achievement and wish to pursue their first master's degree in any academic program offered by the Faculty of Food, Agriculture and Natural Resources (FFARN), Faculty of Climate Change and Sustainability (FCCS) and Faculty of Public Policy and Sustainable Development (FPSD),.

Loom Nam Khong Pijai (GMS Scholarships) for Master's Programs

The Royal Thai Government grants the Loom Nam Khong Pijai Scholarships in honor of HRH Princess Maha Chakri Sirindhorn. The aim is to assist human resources development in 6 GMS countries, namely Cambodia, the Southern Part of China: Yunnan and Guangxi provinces, Laos, Myanmar, Vietnam, and Thailand, in any academic program related to the following four thematic areas:

- Infrastructure Development
- Energy Technology
- Oil, Gas, and Natural Resources Development, and
- Environmental Engineering and Management.

The scholarship provides an opportunity for students from diverse backgrounds across all countries in the Greater Mekong Subregion to study and conduct research together in a truly international environment at AIT, and to build a strong foundation for international understanding among people of Asia.

Eligibility

Applicants must meet the following criteria:

- Have an outstanding education record in a 4-year undergraduate program from an accredited institution in related fields; GPA for Bachelor's degree ≥ 3.5 or Equivalent
- Have an English proficiency score as specified by AIT Language Center (IELTS 6.0 (Overall and Writing bands) or AIT EET ≥ 6.0).

Coverage

Each scholarship award covers tuition fees, accommodation, and a bursary for living expenses in AIT's residential campus, for the entire period of the 22-month master's degree program. The value of the non-binding Scholarship per student is approximately 1.10 MB.

Deadline for August 2026 Intake: 31 March 2026

Interested applicants can apply through the AIT online admission portal. No separate application to fill out. Applicants may describe in their statement of purpose seeking this scholarship. This can be in a separate file and uploaded to the application portal.

PAGE: Guidelines for Applicants who were Offered Admission – Asian Institute of Technology

URL: <https://ait.ac.th/guidelines-for-applicants-who-were-offered-admission/>

Guidelines for Applicants who were Offered Admission

Admission to AIT

a. AIT Offer of admission

b. Applicant confirms acceptance of the offer of admission:

(i) Acceptance of Admission (ii) Financial Assurance Form (FAF) (iii) Academic and Financial Acceptance Form (AFAF) (iv) RTG Declaration Form for those awarded with the RTG Fellowships and Royal Thai Government Scholarships (v) In case of admission with a scholarship, the Notice of Financial Support Form (NOF) and other required documents are mentioned in the offer letter. (vi) Certificate of Health: New students must submit the medical certificate two weeks before enrollment.

c. AIT Certificate of Admission

Important:

- The conditions of the offer of admission are non-negotiable and cannot be changed after you enroll at AIT.
- Please note that applicants from outside Thailand must not proceed to Thailand without the confirmation of admission, and particularly without the proper ED visa approval from the Thai Embassy.
- All students enrolling for the degree programs (diploma, master's & doctoral) should bring their original/attested Bachelor's & Master's transcripts from the 1st to the final year and present these documents to the Admissions Unit, Office of Student Affairs, ground floor Administration Building for verification.
- Exchange and Visiting students are requested to present their original transcripts and degree certificates, along with a letter from the university authorizing their presence at AIT as an Exchange or Visiting student.
- Providing false documents or information is a ground for dismissal from the Institute.

Tuition fees and payments

Please check our Payments section: <https://ait.ac.th/admissions/payment-advice/>

Before you leave the country

1. Passports

- Apply for a passport at once if you do not have one yet, and make sure it is valid for the entire stay at AIT. Must travel to Thailand on a valid passport; if the passport is not in order, you will be sent home immediately. AIT cannot, under any circumstances, assist at the airport if the documents are invalid.
- All applicants must have a Personal or Ordinary Passport (not an Official Passport or Diplomat Passport) when applying for an “Educational Visa (ED)” from the Thai Embassy in their home country to study at AIT.

2. Visa Matters

Group I	Group II	Group IIA	Group III
Nationals of all other countries not mentioned in the following columns	will require an MOFA code (without a police clearance certificate)	will need to be checked with the Thai National Intelligence Agency	
		Nationals of Afghanistan, China, and Iraq	
will receive a telex number from GRU/Office of Thailand Affairs(OTA) a visa authorization letter issued by the Ministry of Foreign Affairs (MOFA) of Thailand, which is also dispatched to the respective Royal Thai Embassy or Consulate via diplomatic channel.	Nationals of Bangladesh, Colombia, Ecuador, Iran, Kuwait, Mexico, Pakistan, Sri Lanka, Trinidad and Tobago, and most of the African countries	will be required to obtain a Police Clearance Certificate (PCC) to present to the Royal Thai Embassy or Consulate in the country they are in when they apply for their “ED” visa (3-month validity). If the local Thai embassy requests, the AIT Education License + supporting documents of the Coordinator of Admissions and Scholarship office (copy of AIT’s authorized person’s passport, his/her work permit, and AIT ID card) can be obtained from the Admissions office.	Nationals of Cambodia, Mongolia, Vietnam
Group I	Group II	Group IIA	Group III
will receive a visa letter issued by Admissions / Office of Students Affairs(OSA) to apply for an education visa “ED.”	Please refer to the process for Group I below		
Will be required to obtain a Police Clearance Certificate (PCC) to be presented to the Royal Thai Embassy or Consulate in the countries they are in when they apply for their “ED” visa (3-month validity). If the local Thai embassy requests, the AIT Education License + supporting documents of the Coordinator of Admissions and Scholarship office (copy of AIT’s authorized person’s passport, his/her work permit, and AIT ID card) can be obtained from the Admissions office.	The visa authorization will normally be approved 2-3 weeks after issuance of the Certificate of Admission.	The visa authorization will normally be approved up to two months after issuance of the Certificate of Admission.	The visa authorization will normally be approved 2-3 weeks after issuance of the Certificate of Admission.
	Please refer to the process for Groups II and IIA below	AIT Education License + supporting documents of the Coordinator of Admissions and Scholarship office (copy of AIT’s authorized person’s passport, his/her work permit and AIT ID card)	
will be required to obtain a Police Clearance Certificate (PCC) to present to the Royal Thai Embassy or Consulate in the country they are in when they apply for their “ED” visa (3-month validity). If the local Thai embassy requests, AIT Education License + supporting documents of the Coordinator of Admissions and Scholarship office (copy of AIT’s authorized person’s passport, his/her work permit, and AIT ID card) can be obtained from the Admissions office.	Please refer to the process for Group III below	will be required to obtain a Police Clearance Certificate (PCC) to present to the Royal Thai Embassy or Consulate in the country they are in when they apply for their “ED” visa (3-month validity). If local Thai embassy request, AIT Education License + supporting documents of the Coordinator of Admissions and Scholarship office (copy of AIT’s authorized person’s passport, his/her work permit and AIT ID card) can be obtained from Admissions office.	

For all Groups:

- Contact the nearest Thai Embassy or Consulate (in person, by letter, or download from the local Thai Embassy website) and request application forms for a non-immigrant visa for educational purposes (ED).
- Since the beginning of 2025, the Thai government has initiated a new visa application process to make it easier. Please apply through the E-Visa platform: Official Website of Thailand Electronic Visa and please select the studying visa and select “bachelor’s degree or higher”

- Submit your passport with your visa application (attach all required documents) to the Thai Embassy or Consulate as soon as possible to process it in time.
- Please apply for a non-immigrant visa (code "ED plus" for degree programs and ED for special programs: Exchange and visiting students); please do not apply for a tourist visa.
- In your passport, you must have an "ED plus" type visa for a degree program and an "ED" type visa for the special degree program: exchange and visiting students. If you come with another type of visa, such as an official "F" or Tourist "T," upon arrival, you will be sent back immediately to your home country to obtain a proper educational visa to travel to Thailand, i.e., an "ED" Visa.

Group I:

- Please show the AIT visa request letter and AIT Certificate of Admission as proof of purpose in coming to Thailand. Some Thai embassies may also request the AIT offer letter and proof of your 1st-semester tuition and fees at AIT.

Group II (and IIA):

- Submit your passport with visa application (attach all required documents, including police clearance certificate; also see group III below) to the Thai Embassy or Consulate as soon as possible so that it can be processed in time.
- Please show a copy of the visa authorization letter or telex number issued by the Ministry of Foreign Affairs (MOFA) of Thailand received from GRU/OTA and AIT Certificate of Admission as proof of purpose in coming to Thailand. Some Thai embassies may also request the AIT offer letter and proof of your 1st-semester tuition and fees at AIT.

Group III:

- Please show a copy of the visa authorization letter issued by the Ministry of Foreign Affairs (MOFA) of Thailand received from GRU/OTA and AIT Certificate of Admission as proof of purpose in coming to Thailand. Some Thai embassies may also request for the AIT offer letter and proof of your 1st-semester tuition and fees at AIT.

3. Application to Enter Thailand

Visa application form to enter Thailand at the Royal Thai Embassy or Consulate General in your home country must be made at least 10 business days before the date of intended departure or at the time of obtaining an Educational visa "ED plus" visa (see 2. Visa Matters above). The application should include copy of a valid "ED" visa issued to study in Thailand.

According to the announcement by the Thai Immigration Bureau, effective May 1, 2025, all non-Thai nationals entering Thailand via air, land, or sea are required to complete the Thailand Digital Arrival Card (TDAC) online prior to arrival.

User Guide: TDAC Registration Manual; When to Register: Within 3 days before your arrival; Apply Here: <https://tdac.immigration.go.th>

4. Health/medical requirements before joining or returning to AIT:

- Category 1: continuing students residing on campus – will be required to undergo a health checkup at the AIT Medical Center
- Category 2: new and continuing students from overseas must bring their medical certificate issued by the recognized medical Doctor by the local Government.
- Category 3: new and continuing students in Thailand residing off-campus must bring their own medical certificate.

5. Other Documents

- Please bring your original transcripts, degree certificate and other documents to cross check or for verification the originality of your submitted documents during the registration/enrollment period.
- Please have an extra copy of the Offer Letter and Certificate of Admission, and Certificate of Enrollment/Student Certificate, for visa renewal purposes upon arrival.
- For non-Thai students, four additional photos (size 4 x 6 cm with white background: no T-shirt) must be submitted to the Government Relations Unit for the extension of your educational visa after two weeks upon arrival. Please write your full name, AIT School, and Nationality at the back of all photographs.

Flight details

Please communicate your flight details toaccommodation@ait.ac.th soon as this is available. Also fill up your flight information in the google form

Note: All applicants must have a Personal or Ordinary Passport (not the Official Passport or Diplomat Passport) when applying for an "Educational Visa" from Thailand Embassy in your home country to study at AIT.

Medical Report

- You must submit a satisfactory physical and mental health report prepared by a qualified physician recognized by the local government and written in English.

- Please ensure that the certificate of health reflects your true medical condition. Making false statements or concealing information regarding your medical condition will make you liable for all expenses to be incurred in case medical treatment will be required during your stay in AIT and is also a ground for dismissal from the Institute.

Note: Certificate of Health must be submitted at least 2 weeks prior to enrollment.

Arrival at the Airport and AIT

Please take a taxi from the airport to AIT-Thammasat Rangsit, which cost about 800-1000 Baht; from Suvarnabhumi airport to AIT or 300-500 baht from Don Muang airport to AIT. Upon arrival at the AIT main gate, please request our security guard for the accommodation office so that officer at the accommodation office can provide you the room key. Please do inform your arrival date and time by sending mail toaccommodation@ait.ac.th as well as fill up the google form. For the AIT location map, please visit the AIT website: <https://ait.ac.th/contact/>

Official pick-up dates for new incoming students coming from overseas is from 01 to 03 August 2026 (For August 2026 intake). In this regard, please make sure you have filled out a Google form with your arrival date and time. Please do specify the airport name, as there are two airports in Bangkok (Suvarnabhumi and Don Muang). Our Student Union (SU) team will be at the airport to pick you up. Our SU team will be in touch with you to provide more guidance. At the same time, our Accommodation Office will reserve a room for you on campus and allocate the room to you upon arrival at the AIT campus at any time. You may also email the accommodation office before your flight takes off to Thailand (accommodation@ait.asia and [cc tosuaccom@ait.asia](mailto:tosuaccom@ait.asia))

All new students will be allocated on-campus accommodation without having to queue.

6. Registration

For new students who are in Thailand: Registration and Payments

Please find below the guidelines for the registration process for the Fall (August) and Spring (January) semesters:

- New students in Thailand are requested to come to the Admissions Unit to register in person starting from 27 July 2026 (note: 28 and 29 July 2026 are official holidays in Thailand) for the August Intake, and from 3 Jan for the January Intake. Please bring the required original documents, such as transcripts and degree certificates, including your medical certificate, to the Admissions Unit of the Office of Student Affairs (OSA).
- If payment for the first-semester fees has been made by bank transfer (see the bank account details here), please submit the bank transaction details to the cashier and obtain an AIT official receipt. The semester fees include Tuition Fee, Registration Fee, Language Support Fee, Medical Insurance, SU Fee, and Student ID Card (Please refer to your Financial Assurance Form). Please also email a copy of your bank transaction details to the Scholarships & Invoicing Unit atso@ait.ac.th
- The Scholarships & Invoicing Unit will endorse your documents to the Registry to process your ID Card, and you can then obtain your username/password to access the SIS (Student Information System).
- Please scan the QR code below or fill up the form for your student ID card.

For new students who are overseas: Registration and Payments

Please find below the guidelines for the registration process for the Fall (August) and Spring (January) semesters:

- For new students who are in their home countries and are unable to arrive at AIT on time, a Program staff from your Academic Program at AIT will collect from the Admissions and Scholarships Unit (ASU) your user ID and password to access Student Information System (SIS). Program staff will provide you the user ID and password.
- The Academic Program staff will facilitate and guide you in registering for your Fall courses (SIS-online), as well as in your attendance in the online hybrid classes (case by case basis) in case you are not able to join on campus on time because of some personal reasons or late admission or delay in visa procedural.
- Students who have already made payments for the first semester fees, are requested to send the scanned copy of the transaction details or bank transfer receipt toaso@ait.ac.th or toaso@ait.asia and copy toprateep@ait.asia. You will be issued a receipt of acknowledgment through email. There may be difficulty in transferring the funds on time due to restrictions at your home country or current location. If so, please contact the Admissions and Scholarships Coordinator, Dr. Tenzin Rabgyal (tenzin@ait.ac.th or tenzin@ait.asia).
- Please scan the QR code below or fill up the form for your student ID card.

Note: All courses for the January and August semesters will be offered in-person

7. Orientation The Orientation program for new students for August Intake (04 August 2026) and January Intake (05 January 2027) intakes will be at the Robert B. Banks Auditorium in the AIT Conference Center. The Orientation program will also be conducted online via live streaming for students who are unable to attend in person. Detailed instructions and other information will be provided three weeks before enrollment.

8. Medical Insurance

- All new students are required to take mandatory standard medical insurance offered by AIT Partners. The details are in the standard plan, which covers certain costs of hospitalization, outpatient treatment, treatment for COVID-19, dental care, and personal accidents but not major medical expenses.
- The initial premium for the August semester intake (for 5 months) is approximately Baht 1,250, to be renewed in the January semester of the following year; for students studying in January and August semesters, the annual premium is approximately Baht 2,500.
- Students receiving AIT scholarships must consult the Admissions and Scholarships unit if their donors have provisions for such.
- The Institute accepts no responsibility for medical expenses on or off campus incurred by students' spouses, children, or other relatives.

9. Notes to Students on Fellowships/Scholarships:

- Students on AIT scholarship must note that the conditions of the award are not negotiable.
- The scholarship bursary is only a contribution towards the cost of books, food and miscellaneous expenses. Thus, some students may find it necessary to supplement this allowance from their own funds. The bursary is provided about three weeks after registration upon submission of your bank account (Kasikorn Bank or Siam Commercial Bank, near AIT campus, Thailand). You can open your bank account any of this bank upon arrival. Scholarship recipients are therefore advised to bring personal funds of at least US\$ 300 to cover the expenses for the first three weeks at AIT.
- Students on other funding categories (Self-Support, Externally Supported/ Sponsored): The certified and signed Financial Assurance Form with additional certification or evidence of financial support must be submitted to AIT as part of the documents required for enrolment. You will not be allowed to register for enrolment if these documents are missing.
- In accepting the offer, the first semester fees must be paid prior to your arrival at AIT. The deadline for advanced payment is during the orientation day or the first day of the semester, otherwise, registration will not be allowed. Late payment is subject to a 1.5% per month interest penalty
- Tuition and registration fees are charged per semester and fixed in Thai currency (Baht). However, for convenience, payment can also be made in US Dollars at a rate that is quoted in advance for each semester and valid for the duration of that semester. Though the amount in Thai Baht is fixed during the duration of the study program, the equivalent amount in US Dollars may change in subsequent semesters. Students are free to choose to pay in either Thai Baht or USD currency.
- With regard to bank remittance or bank transfer, please indicate the details in the bank advice to facilitate identification of the payment so that it can be recorded immediately in the AIT accounting system. Please visit the AIT admissions website for updates or announcements on payment policies and study fees. For further enquiry on payment, you may also contact AIT Finance Dept. Tel. no. (66-2) 524-5055 (E-mail: jhozine@ait.asia).
- Opening a Bank Account

There is a local bank near campus, Kasikorn Bank or Siam Commercial Bank. A minimum fee deposit of about Baht 500 is required to open a savings account and another Baht 650 for a Debit Card. To open your bank account, you need to submit the Student Certificate and Student ID + copy of your passport. Student Certificate and ID card can be obtained once you complete the registration.

- Children's Education

The AIT International School teaches children up to grade 6. Students' children will, however, be admitted only if the concerned parent has a written permission for the children to be with him/her on campus. Children of students can avail of 50% subsidy for their children's education. For more details on the AIT International School, please visit their website

- Climate: The climate of Thailand is generally hot and humid. The hottest months are March and April, and the rainy season is from May to October.

Orientation

New students are required to attend the following events to be properly oriented with life in AIT

EVENT	DATE	VENUE
Institute-wide Orientation Program Schedule	04 August for the August 2026 Intake 05 January for the January 2027 Intake	Robert B Banks Auditorium
Schools' Orientation Program Schedule	05 to 11 August for the August 2026 Intake 06 to 11 January for the January 2027 Intake	Respective Schools
